# Consolidated Corporate Governance Report

Since 2004, UNIQA has been committed to compliance with the Austrian Code of Corporate Governance (ÖCGK) as currently amended and publishes the declaration of conformity both in the Group report and on www.uniqagroup.com in the Investor Relations section. The Austrian Code of Corporate Governance is also publicly available at www.uniqagroup.com and www. corporate-governance.at. The January 2023 version of the Austrian Code of Corporate Governance applies for the 2024 financial year.

The Corporate Governance Report and the Consolidated Corporate Governance Report of UNIQA Insurance Group AG for the 2024 financial year in each case are summarised in this report in accordance with Section 267b in conjunction with Section 251(3) of the Austrian Commercial Code.

Implementation and compliance with the individual rules in the Austrian Code of Corporate Governance, with the exception of Rules 77 to 83, are evaluated annually by PwC Wirtschaftsprüfung GmbH. Rules 77 to 83 of the Austrian Code of Corporate Governance are evaluated by the law firm Schönherr Rechtsanwälte GmbH. The evaluation is carried out based mainly on the questionnaire, published by the Austrian Working Group for Corporate Governance, for the evaluation of compliance with the Code. The reports on the external evaluation in accordance with Rule 62 of the Austrian Code of Corporate Governance can also be found at www.uniqagroup.com.

The Supervisory Board is supported by Vienna Strategy HUB GmbH with self-assessments of the Supervisory Board regarding the efficiency of its activities (Rule 36 of the Austrian Code of Corporate Governance).

UNIQA also declares its continued willingness to comply with the Austrian Code of Corporate Governance as currently amended.

#### The work of the Management Board

The work of the members of the Management Board of UNIQA Insurance Group AG is regulated by rules of procedure. The allocation of the responsibilities as decided by the Group Executive Board is approved by the Supervisory Board. The rules of procedure govern the obligations of the members of the Management Board to provide the Supervisory Board and each other with information and approve each other's activities. The rules of procedure also specify a list of activities that require consent from the Supervisory Board. The Management Board generally holds weekly meetings in which the members of the Management Board report on the current course of business, determine what steps should be taken and make strategic corporate decisions. In addition, there is a continuous exchange of information between the members

of the Management Board regarding relevant activities and events.

The meetings of the Management Boards of UNIQA Insurance Group AG and UNIQA Österreich Versicherungen AG, which are composed of the same individuals, are usually held as joint sessions.

The Management Board informs the Supervisory Board at regular intervals, in a timely and comprehensive manner, about all relevant questions of business development, including the risk situation and the risk management of the Group. In addition, the Chair of the Supervisory Board is in regular contact with the CEO to discuss the company's strategy, business performance and risk management.

# Publication in accordance with Rule 49 of the Austrian Code of Corporate Governance

Group companies of UNIQA Insurance Group AG have appointed the law firm andréewitch & partner rechtsanwälte GmbH to provide consulting services on matters involving IT law. Supervisory Board member Markus Andréewitch holds a 60 per cent stake in this company. A shareholder and partner of andréewitch & partner rechtsanwälte GmbH has a mandate to provide legal advice to UNIQA. Markus Andréewitch does not personally contribute to the advisory services. The advisory services are remunerated at arm's length. The Supervisory Board has provided its consent for the mandate to provide legal advice to be awarded/continued.

## The work of the Supervisory Board and its committees

The Supervisory Board advises the Management Board in its strategic planning and projects. It decides on the matters assigned to it by law, the Articles of Association and its rules of procedure. The Supervisory Board is responsible for supervising the management of the company by the Management Board. It is comprised of ten shareholder representatives and five employee representatives, and it convened for seven meetings in 2024. Two decisions were made by way of circular resolution. All members of the Supervisory Board attended more than half of the meetings of the Supervisory Board in the 2024 financial year either in person, or virtually via telephone or video conference.

A Committee for Board Affairs has been appointed to handle the relationship between the company and the members of its Management Board relating to employment and salary; this committee also acts as the Nominating and Remuneration Committee (for the Management Board) and is composed of the members of the Executive Committee of the Supervisory Board. In 2024, the Committee discussed the remuneration of the Management Board, dealt with the preparation of the 2023 Remuneration Reports for the Management Board and the Supervisory Board in alignment with the remuneration policy established, the preparations for renewal of the remuneration policy, as well as with the succession planning of the Management Board and the Supervisory Board over four meetings. One resolution was passed by circular resolution.

The **Working Committee** of the Supervisory Board is only called upon to make decisions if the urgency of the matter means that the decision cannot wait until the next meeting of the Supervisory Board. The Chair is responsible for assessing the urgency of the matter. The resolutions passed must be reported in the next meeting of the Supervisory Board. Generally, the Working Committee can make decisions on any issue that is the responsibility of the Supervisory Board, but this does not include issues of particular importance or matters that must be decided upon by the full Supervisory Board by law. The Working Committee did not convene for any meetings in 2024.

The Audit Committee of the Supervisory Board performs the duties assigned to it by law. The Audit Committee convened for three meetings, which were also attended by the statutory auditor of the (consolidated) financial statements, and there were also discussions with the auditor without the presence of the Management Board. The meetings dealt with all the documents relating to the financial statements, the Corporate Governance Report, the appropriation of profit proposed by the Management Board and the report on the audit of the risk management (all for the 2023 financial year); in addition, PwC Wirtschaftsprüfung GmbH was again proposed for selection as statutory auditor for the 2025 financial year. The planning of the 2024 audits of the companies of the consolidated group was discussed with the statutory auditor and the statutory auditor reported on the results of preliminary audits. The Audit Committee also received quarterly reports from Internal Auditing concerning audit areas and material findings based on the audits conducted and the compliance officer reported on her activities on an ongoing basis. The accounting process was monitored on the basis of specific circumstances.

The **Investment Committee** advises the Management Board with regard to its investment policy; it has no decision-making authority. The Investment Committee held four meetings during which the members discussed the capital investment strategy, questions concerning capital structure and the focus of risk management and asset liability management.

The **IT Committee** dealt with the ongoing monitoring of project progress in the implementation of the UNIQA Insurance Platform and other IT projects over the course of four meetings.

The **Digital Transformation Committee** held four meetings in 2024 in which it dealt with the digitalisation of core processes, the reduction in complexities in the product portfolio and the consolidation of digital work processes related to customers and employees.

The Supervisory Board's Human Resources and General Remuneration Committee ("HR Committee") held four meetings on diversity and inclusion matters, employee development and talent management issues, as well as executive remuneration schemes and employee participation programmes. The Committee also dealt intensively with the progress in implementation of the HR strategy and with the latest developments and trends in connection with new technologies. The activities of the HR Committee are carried out in close coordination with the Committee for Board Affairs.

The chairs of the respective committees informed the full Supervisory Board about the meetings and their committees' work.

For information concerning the activities of the Supervisory Board and its committees, please also refer to the details in the Report of the Supervisory Board.

Due to identical composition of both the share-holder representatives and the employee representatives, the Supervisory Board of UNIQA Insurance Group AG meets in a joint session with the Supervisory Board of UNIQA Österreich Versicherungen AG.

#### Independence of the Supervisory Board

All members of the Supervisory Board elected during the Annual General Meeting have declared their independence under Rule 53 of the Austrian Code of Corporate Governance. Anna Maria D'Hulster and Jutta Kath meet the criteria under Rule 54 of the Austrian Code of Corporate Governance, as they are neither shareholders with a stake of more than 10 per cent nor do they represent the interests of such shareholders.

A Supervisory Board member is considered independent if he or she is not in any business or personal relationship with the company or its Management Board, which represents a material conflict of interest and is therefore capable of influencing the behaviour of the member concerned. UNIQA has established the following additional criteria for determining the independence of a Supervisory Board member:

- The Supervisory Board member should not have been a member of the Management Board or a senior executive of the company or a subsidiary of the company in the past five years.
- The Supervisory Board member should not maintain or have maintained within the last year any business relationship with the company or a subsidiary of the company that is material for the Supervisory Board member concerned. This also applies to business relationships with companies in which the Supervisory Board member has a significant economic interest, but it does not apply to functions performed on decision-making bodies in the Group.
- The Supervisory Board member must not have been an auditor of the company or a shareholder or salaried employee of the auditing company within the last three years.
- The Supervisory Board member should not be a member of the Management Board of another company in which a Management Board member of the company is a member of the other company's Supervisory Board unless one of the companies is a member of the other company's group or holds an investment in the other company.
- The Supervisory Board member should not be a member of the Supervisory Board for longer than 15 years.
   This does not apply to Supervisory Board members who are shareholders with a business investment or who are representing the interests of such a shareholder.
- The Supervisory Board member should not be a close family relative (direct descendant, spouse, life partner, parent, uncle, aunt, sibling, niece or nephew) of a Management Board member or of persons who are in one of the positions described in the above points.

#### Measures to promote women on the Management Board, the Supervisory Board and in executive positions

A community the size of ours at UNIQA lives and breathes through diversity. We value and respect each other, regardless of gender, age, origin, physical ability, religion or ideology. Our employees are just as diverse as our customers. A diverse workforce helps us to better understand our customers and better serve their different needs. For us, the guiding principle "Living better together" is only fulfilled when equal rights and equal opportunities are given in their entirety.

UNIQA is convinced that diversity, equal opportunities and inclusion promote employee loyalty to the company as well as their innovative potential and productivity. Since they lead to higher customer satisfaction and better financial results, diversity and inclusion are also a decisive factor for economic success and growth.

There are now four women on the Supervisory Board of UNIQA Insurance Group AG including Marie-Valerie Brunner, Anna Maria D'Hulster, Jutta Kath and since the middle of the year Monika Henzinger. This means that the proportion of female Supervisory Board members among the elected members (shareholder representatives) has reached 40 per cent and is therefore well above the quota required by law. With Sabine Andre and Irene Scheiber, two women have also been delegated to the group of employee representatives on the Supervisory Board, which means that there is now also a quota of 40 per cent female members on this board. In relation to the Supervisory Board as a whole, this also results in a proportion of women of 40 per cent, which significantly exceeds the statutory quota of 30 per cent.

The Management Boards of UNIQA Insurance Group AG and UNIQA Österreich Versicherungen AG, which include the same individuals and have been reduced to seven members, now include one woman, Sabine Pfeffer, an important sign on the way to the goal of "More women in executive roles". The UNIQA Group does of course also continue to implement various accompanying measures in addition to its clear commitment to this goal. The objective is to change the framework conditions and prerequisites in such a way that the organisation becomes more permeable overall for women's careers. At 57.1 per cent (2023: 57.9 per cent), the proportion of women in the UNIQA Group's total workforce had fallen slightly by the end of 2024. This proportion which is still a high one is primarily driven by the international insurance companies (63.0 per cent).

The proportion of women on the Group's Management Boards is 31.6 per cent, a significant increase compared to 2023 (2023: 26.3 per cent). Of the 1,431 managers across the Group, 569 are women, which equates to 39.8 per cent. There is a clear difference between the Austrian and international companies of the UNIQA Group (proportion of women 25.6 per cent compared to 45.4 per cent).

#### **Diversity concept**

UNIQA adapted the diversity and inclusion strategy in 2024 that has been in place since 2022 based on the priorities and targets adopted for the years 2024-2026. The strategy serves as the basis and framework for all our activities in this area and, as an integral part of the "UNIQA 3.0 – Growing Impact" strategic programme developed by us, is clearly aligned with our Guiding Principles. In addition to specific measurable goals, it also contains a bundle of initiatives focussing primarily on four key areas: equal pay for work of equal value, more women in management roles, successful cooperation between all generations and inclusion of people with disabilities.

Our overarching goal is to promote diversity and inclusion at UNIQA. We will continue to pursue the following specific priorities:

- 1. Equal pay for work of equal value
- 2. Promoting equal opportunities with the clear aim of bringing more women into management positions in the future
- **3.** Generation management old and young contribute to the success of the company together
- 4. Achieving a work/life balance
- Utilising internationality and cultural diversity as a strength
- 6. People with disabilities better inclusion and support
- Clear commitment to non-discrimination on the basis of sexual orientation and identity

UNIQA further intensified networking and international contacts in 2024 with Group-wide projects and targets agreed across the entire Group that are consistently aligned with the defined focus areas. This cross-border collaboration promotes diversity and allows us to leverage the potential of an international group.

#### Equal pay for work of equal value

The importance of fair pay is highlighted through the fact that a Group-wide target to reduce the adjusted pay gap was set for the first time in 2024 and included in the criteria for the variable component in management remuneration. While the gender pay gap was still 4.0 per cent across the Group in 2023, this was reduced to 3.1 per cent in 2024 thanks to a number of different measures. The target of a 20 per cent reduction was therefore even exceeded slightly. The initial figure of 1.3 per cent in Austria was successfully reduced even further to below 1 per cent (0.9 per cent).

#### More women in management positions

Increasing the proportion of women in management positions continues to be a very high priority for UNIQA. We make a distinction therefore between top management positions (Board to Board -2 level) and other management positions, which allows us to implement measures that are even more effective. When it comes to the proportion of women in top management positions, the main focus is on selecting and filling these positions. Development into higher roles is another priority for the other female managers. There is also a strong disparity between Austrian and international companies in both these segments. The proportion of women in top positions in Austria is 23.7 per cent, while internationally it is 44.6 per cent. The proportion in middle management is higher at 27.6 per cent and 47.1 per cent respectively.

One of the most important framework conditions for women's careers in the company is balancing a career with family life. UNIQA is convinced that this is not an either/or situation. Following successful completion of the corresponding audit, the Austrian site was certified as a family-friendly company. The numerous additional measures agreed as part of the audit will ensure that this goal is pursued consistently over the next three years. Particular attention is paid to the issue of women in management positions, parental leave management, caring for relatives and ensuring greater flexibility in working conditions.

#### **Generation management**

The increasing shortage of skilled labour and demographic change continue to pose a major challenge for UNIQA. We are responding to this by training our own specialists. UNIQA currently offers training places to 124 apprentices following the successful launch of apprentice training also at head office in 2024.

In addition to a mentoring programme, which has operated in Austria every year since 2021, we have also developed a reverse mentoring programme to connect young and experienced employees. The "My unique Summer" trainee programme also offered young talents at the start of their career the opportunity to gain initial experience outside of Austria. Both projects were first launched in Austria and the countries in Southeastern Europe in 2024 and are due to be implemented in other countries in stages throughout 2025.

#### People with disabilities

Our diversity strategy defines targeted recruitment of people with disabilities as a key objective in our core markets. Job shadowing and internships for people with disabilities were offered in Poland and Austria for instance as part of the "UNIQA Ability" project. There are successful partnerships in place in Czechia with local organisations that promote inclusion of people with disabilities in the labour market. The plan is to step up similar initiatives also in other countries on a gradual basis.

All job vacancies in Austria have been displayed on the myAbility job platform for one year since mid-October in order to reach this target group even more effectively in future. Other accompanying measures in 2024 included raising awareness among managers and HR experts at UNIQA, positioning the company as an inclusive employer through appropriate references in job advertisements and continuous improvement when it comes to accessibility in a wide variety of areas (e.g. Group head office, careers website).

## Commitment to diversity, equality and inclusion

We are committed to the power of diversity and leave no room for intolerance and marginalisation. There is now a clearly defined process and clear contact persons in the event of allegations of discrimination. This allows us to offer affected employees a low-threshold option for addressing stressful situations. A mandatory e-learning programme on the topic of equal treatment in Austria provides some important information on the topic.

Six networks provide an opportunity for interested employees in Austria to get involved with various aspects related to diversity. The women's network has organised webinars, seminars and a high-profile panel discussion on International Women's Day, as well as a breakfast with members of the Management Board and participation in the Women's Run. The LGBTQIA+ network presented information on sexual orientation in an entertaining way with a pub quiz. As part of Sensing Journeys, the Network for Inclusion offered the opportunity to experience the world up close from the perspective of someone with a disability.

UNIQA has also supported and highlighted numerous corresponding initiatives outside the company in Austria. The Special Olympics, the Austrian Women's Shelters and the EuroGames (the multi-sport event of the LGBTQIA+ community) are just a few examples of this.

#### **Remuneration Report**

A revised remuneration policy was submitted to the Annual General Meeting on 3 June 2024 for a vote after four years. The Remuneration Report 2024 for the Management Board and Supervisory Board of UNIQA Insurance Group AG is prepared in accordance with Sections 78c and 98a of the Austrian Stock Corporation Act in line with the revised remuneration policy and will be submitted to the Annual General Meeting on 2 June 2025 for approval.

#### Risk report, directors' dealings

A comprehensive risk report (Rules 69 and 70 of the Austrian Code of Corporate Governance) is included in the notes to the consolidated financial statements. The notifications concerning directors' dealings in the year under review (Rule 73 of the Austrian Code of Corporate Governance) can be found in the Investor Relations section of the Group website at www.uniqagroup.com.

#### **External evaluation**

Implementation of, and compliance with, the individual rules in the Austrian Code of Corporate Governance were evaluated by PwC Wirtschaftsprüfung GmbH for the 2024 financial year – with the exception of Rules 77 to 83. Rules 77 to 83 of the Austrian Code of Corporate Governance are evaluated by the law firm Schönherr Rechtsanwälte GmbH. The evaluation is carried out based mainly on the questionnaire, published by the Austrian Working Group for Corporate Governance, for the evaluation of compliance with the Code.

The evaluation by PwC Wirtschaftsprüfung GmbH and Schönherr Rechtsanwälte GmbH confirming that UNIQA complied with the rules of the Austrian Code of Corporate Governance in 2024 will be published simultaneously with the annual financial report for the 2024 financial year.

# Report of the Supervisory Board

# Dear Shareholders, Dear Ladies and Gentlemen,

Last year in my letter to you, I took the opportunity to thank Walter Rothensteiner, a long-standing member and later Chair of the UNIQA Supervisory Board, for his work. This year, I would also like to thank Christian Kuhn, who retired from the Supervisory Board as Second Vice President towards the middle of 2024 after 18 years of successful and extraordinarily dedicated service.

The members of the Supervisory Board of UNIQA Insurance Group AG, which is identical to that of our largest subsidiary UNIQA Österreich Versicherungen AG, continued to support the development of our Group in 2024 with a great deal of personal commitment, time and care.

We continue to see our role – above and beyond the legal requirements – as a vigilant, constructively critical, attentive "challenger" of the Management Board. At each meeting, we dealt intensively with the company's operating performance in the four individual quarters of 2024 – the last year of the four-year strategic programme "UNIQA 3.0 – Seeding The Future".

We have learnt from this and – together with the management – have defined the strategic areas in which the UNIQA Group wants to improve and set the course for the future: What are the long-term sources of the Group's profitable growth? In which markets do we want to be present in the future? How are our three product groups performing? And those of our three customer segments? How can we scale the high-potential healthcare services that we offer under our young secondary brand Mavie? How do we ensure that we can continue to attract top talent as employees? And how can we keep pace with increasing customer demands? What expectations does the capital market have of UNIQA in the long term?

The committees of the Supervisory Board play a special role in our corporate culture: In the committees for Digital Transformation, IT, HR, Investment, Audit and Management Board Affairs, members of the Supervisory Board work in depth with the responsible members of the Management Board on special topics of strategic relevance. This is often done with the involvement of external speakers and initiators, always with the involvement of the relevant UNIQA experts that are not on the Management Board. While we held one of our meetings in Prague and one in Warsaw in 2022 and 2023 due to the massive increase in the importance of our business in the CEE region, we opted for Sarajevo in 2024. In doing so, we focussed intensively on the performance of the six countries in Southeastern Europe, which we have grouped together under the name SEE 6 and which are becoming increasingly economically relevant within our Group: Romania, Bulgaria, Serbia, Croatia, Bosnia and Herzegovina, and Montenegro. These meetings in the CEE region also give us the opportunity to come into direct contact not only with local operational management, but also with the region's greatest talents.

The ongoing professional development of the Supervisory Board remains a high priority: The changes in our industry, for example around the topic of artificial intelligence, are taking place at such a speed that only a Supervisory Board with a truly broad and complementary range of expertise can keep pace. We endeavour to anticipate such developments when making appointments to the Supervisory Board and to align the focus of our training courses accordingly.

# 1. Topics that were particularly important to us in 2024

On the one hand, our seven meetings were focused on evaluating the implementation of the last year of our "UNIQA 3.0 – Seeding The Future" strategic programme, which came to an end in December 2024. At the same time, we worked intensively on developing the new Group strategy, "UNIQA 3.0 – Growing Impact", which will now be in place from 2025 to 2028.

The Supervisory Board deals with a broad range of topics. While regulatory and supervisory issues are taking up more and more of our time (in addition to the obvious evaluation of operational business development), we continue to focus intensively on three areas that are of particular importance for UNIQA's long-term development: (i) cultural transformation, diversity and human development, i.e. the battle for the best talent in challenging labour markets, which has led us to welcome around 6,000 new employees across the Group in the last three years alone; (ii) the strategic importance of ESG with its broad-based impact on product design, asset management and governance; and finally, (iii) the cost-intensive and demanding technological and digital development of the company.

For several years now we have been reporting to you how we pay particularly close attention to the quality of our cooperation within the Supervisory Board as well as with the Management Board. We do this, among other things, by means of an annual anonymised survey of the individual members of the Supervisory Board and subsequent discussion of the evaluation results in the Supervisory Board. Every four years, we carry out a comprehensive self-evaluation (via anonymised surveys, individual interviews and a subsequent workshop), which is accompanied by Werner H. Hoffmann (Director of the Institute for Strategic Management at the Vienna University of Economics and Business). We continued this work in the 2024 financial year – with one change in personnel: In place of Christian Kuhn, Monika Henzinger, Professor at the Institute of Science and Technology Austria (ISTA), was elected to the Supervisory Board at the last Annual General Meeting, where she will contribute her many years of experience.

## 2. Timeline and details of our main areas of focus

In the course of 2024, the Supervisory Board was regularly informed by the Management Board about the business performance and position of UNIQA Insurance Group AG and the Group as a whole. It also supervised the Management Board's management of the business and fulfilled all the tasks assigned to the Supervisory Board by law and the Articles of Association. At the Supervisory Board meetings, the Management Board presented detailed quarterly reports and provided additional oral as well as written reports on business development. The Supervisory Board was given timely and comprehensive information about measures requiring our approval.

In 2024, four information events and special seminars were held for the Supervisory Board, providing information on the topics of the "NatCat Competence Center", "Product Landscape, Services, Sustainability", "Artificial Intelligence" and "DORA, ESG, Compliance and IFRS".

#### Focus of our deliberations

The Supervisory Board held seven meetings in 2024. Our meetings focused on the Group's respective current earnings situation and the Group's further strategic development. In the second half of the year the Supervisory Board held one extraordinary meeting to focus in particular on the plans to develop the corporate strategy from 2025. In addition, we made one decision by circular resolution – namely, the approval of the acquisition of an office property in Warsaw.

- At our meeting held on 6 March, we mainly discussed the Group's preliminary results for the 2023 financial year. Furthermore, reports were given on the status and planning of the development of the new strategic programme starting in the 2025 financial year.
- The Supervisory Board meeting on 10 April focused on the audit of the annual financial statements and consolidated financial statements for the year ended 31 December 2023, including the 2023 Consolidated Corporate Governance Report, and on the reports from the Management Board with up-to-date information on the performance of the Group in the first quarter of 2024. We also discussed the items on the agenda of the 25th Annual General Meeting on 3 June, in particular the proposal for the appropriation of profits, the proposal for the election of a Supervisory Board member and the proposal to the Annual General Meeting to re-elect PwC Wirtschaftsprüfung GmbH as statutory auditors for the 2025 financial year. The report by auditors PwC Wirtschaftsprüfung GmbH and lawyers Schönherr Rechtsanwälte GmbH regarding compliance with the provisions of the Austrian Code of Corporate Governance (ÖCGK) in the 2023 financial year was also acknowledged. After preliminary discussion in the Remuneration Committee, the 2023 Remuneration Report and the renewed 2024 Remuneration Policy were prepared and approved for presentation at the Annual General Meeting. Information was provided on the status of the new strategy programme.

- At the meeting on 23 May, we looked in detail at the Group's earnings in the first quarter and development in the ongoing second quarter. We were again informed by the Management Board about the status of the new strategic programme.
- The newly elected Supervisory Board was constituted on **3 June** following the Annual General Meeting. The second Vice Chair of the Supervisory Board, Christian Kuhn, stepped down from the Supervisory Board as a result of reaching the statutory age limit. He had been a member of the Board from 2006 to 2024. Elgar Fleisch succeeded him as second Vice Chair of the Supervisory Board. Due to Christian Kuhn's departure from the Supervisory Board and the election of Monika Henzinger to the Supervisory Board, there were changes in the composition of the Supervisory Board committees.
- On 21 August, we met in Sarajevo at the headquarters of our insurance group company in Bosnia and Herzegovina. We discussed in particular the Group's earnings situation in the first half of the year and developments in the ongoing third quarter. In addition, a change in the allocation of responsibilities on the Management Board of UNIQA Insurance Group AG and UNIQA Österreich Versicherungen AG was approved. The decision on the reassignment of responsibilities following the departure of two members of the Management Board in the first half of the year had already been taken in November of the previous year.
- In an extraordinary meeting on 30. Septemberthe Supervisory Board discussed the draft version of the new strategy programme "UNIQA 3.0 Growing Impact" from the 2025 financial year.

• In addition to reporting on the Group's profits in the first three quarters and ongoing developments in the fourth quarter, our meeting on 20 November also covered the updated forecast for the 2024 financial year. The focus of the discussions was the approving acceptance of the "UNIQA 3.0 – Growing Impact" strategic programme starting in 2025. It had been finalised by the Management Board and included in particular the budget for 2025 and the medium-term plans up to 2029. Furthermore, the sale of the Group companies in Albania, North Macedonia and Kosovo was approved. Finally, we decided on changes to two Supervisory Board committees and dealt with the annual efficiency review of our activities as a Supervisory Board.

#### **Committees of the Supervisory Board**

In addition to the Audit Committee required by law, we have set up and appointed a further six committees in order to ensure that the work of our Supervisory Board is structured effectively.

The Committee for Board Affairs ("Personnel Committee") corresponds with the Executive Committee of the Supervisory Board in terms of its composition. The Committee also performs the tasks of a Nominating and Remuneration Committee (for the Management Board) in parallel. The Executive Committee or the above-mentioned Committee held several meetings in 2024 for intensive discussions on the progress made in implementing the UNIQA 3.0 strategic programme that would start in 2025. The meetings also dealt with the preparation of the 2023 remuneration reports for the Management Board and the Supervisory Board. A new remuneration system for the Management Board was developed and approved on the basis of a revised remuneration policy.

- The Audit Committee held three meetings in the 2024 financial year with representatives of the (Group) auditor PwC Wirtschaftsprüfung GmbH also present, with discussions also held with these without the Management Board present. The meeting on 10 April addressed all financial statement documentation, the proposed appropriation of profit and the statutory auditor's report on the audit of the company's risk management. In addition, the 2023 annual report of the Internal Audit department, including the audit plan for the current year and the 2023 annual activity report of the compliance officers, was presented and acknowledged. Furthermore, PwC Wirtschaftsprüfung GmbH was once again proposed for election as statutory auditor for the 2025 financial year. At the meeting held on 23 May, the statutory auditor presented the plans for the audit of the UNIQA Group companies for the 2024 financial year and coordinated them with the Committee. At the meeting held on 20 November, the auditor informed the Committee of the preliminary audit findings concerning the current financial year. In addition, the Committee received quarterly reports from Internal Audit on the areas audited by this department and any material findings that arose from these audit actions, and the Compliance Officer reported on her activities on an ongoing basis. The Committee fulfilled its remit of monitoring the accounting process.
- The Investment Committee held four meetings during which the members discussed the capital investment strategy, questions concerning capital structure and the focus of risk management and asset liability management.
- The IT Committee held four meetings to discuss the ongoing monitoring of progress in the business and IT transformation (UNIQA Insurance Platform) and other IT projects, in particular the project portfolio.

- The Digital Transformation Committee held four meetings devoted to the business activities of Mavie Holding, which develops health offerings that go beyond classic insurance products. In addition, the Committee evaluated the progress of digitally-available insurance products and services, explored the considerations concerning a group collaboration model and discussed the digital transformation in Southeastern Europe and the new agile ways of working. Guest speakers were invited to the meetings to address specific topics.
- The Supervisory Board's Human Resources and General Remuneration Committee ("HR Committee") held four meetings on diversity and inclusion matters, employee development and talent management issues, executive remuneration schemes and employee participation programmes. The Committee also dealt intensively with the revision of the HR strategy as part of the new strategic programme. The HR Committee's activities are closely coordinated with the Personnel Committee. Guest speakers were invited to the meetings to address specific HR-related topics.
- The Working Committee did not hold any meetings in the past financial year.

The chairs of the respective committees informed the full Supervisory Board in detail about the meetings and their committees' work.

# 3. Separate annual and consolidated financial statements

The separate annual financial statements prepared by the Management Board, the Management Report of UNIQA Insurance Group AG, the consolidated financial statements prepared in accordance with International Financial Reporting Standards (IFRSs) and the Group Management Report for 2024 were audited by PwC Wirtschaftsprüfung GmbH. The auditor also verified that a combined non-financial report and a consolidated corporate governance report had each been prepared for the 2024 financial year. The audit raised no objections. The separate and consolidated financial statements were each awarded an unqualified audit opinion for 2024.

The Supervisory Board acknowledged and approved the findings of the audit.

The evaluation of UNIQA's compliance with the rules of the Austrian Code of Corporate Governance in the 2024 financial year was carried out by PwC Wirtschaftsprüfung GmbH, whereas compliance with Rules 77 to 83 of the Austrian Code of Corporate Governance was assessed by Schönherr Rechtsanwälte GmbH. The evaluations showed that UNIQA complied with the rules of the Austrian Code of Corporate Governance in the financial year 2024.

The Supervisory Board acknowledged the consolidated financial statements for 2024 and approved the 2024 annual financial statements of UNIQA Insurance Group AG. It also endorsed both the Management Report and the Group Management Report. The 2024 annual financial statements were thereby adopted in accordance with Section 96(4) of the Austrian Stock Corporation Act.

The Supervisory Board reviewed and approved the proposal for the appropriation of profit submitted by the Management Board. Accordingly, a dividend distribution of €0.60 per share will be proposed to the Annual General Meeting on 2 June 2025.

This year, once again, I would like to take the opportunity on behalf of the Supervisory Board to extend my warmest thanks to all employees of UNIQA Insurance Group AG and its Group companies for their huge personal commitment in the past financial year 2024 and to wish them good health and continued success!

Vienna, April 2025

On behalf of the Supervisory Board

Burkhard Gantenbein

Chair of the Supervisory Board

# Group Management Report

# Group Management Report

#### Performance

#### **Economic environment**

The year 2024 was characterised by continued weakness in the manufacturing industry worldwide. In Europe, France, Germany and Austria were particularly affected by the difficulties in the industrial sector. In contrast, the service sector proved to be much more robust. The Purchasing Managers' Index for the eurozone rose to 52 points in the summer, indicating solid growth in the service sector. Overall, economic growth in the eurozone is estimated at around 1 per cent for 2024. Spain led the way with an increase of just under 3 per cent, followed by France with around 1 per cent and Italy with 0.7 per cent. Germany stagnated, while Austria brought up the rear in the eurozone with a GDP decline of 0.7 per cent.

The improvement in the financial environment in 2024 had a supporting effect. The European Central Bank (ECB) lowered interest rates four times during the year, each time by 25 basis points, as inflation had fallen significantly compared to previous years. The inflation rate in the eurozone fell steadily over the course of the year and stood at 2.2 per cent in December, in Austria it was even below 2 per cent.

In contrast, political crises, particularly in the core countries of the EU, and the ongoing war in Ukraine weighed on the economy. Despite this, the labour market remained robust: No significant increase in the unemployment rate was recorded in 2024, nor is one expected for 2025.

However, the renewed discussion about the Maastricht criteria for national budgets, which force highly indebted countries to implement austerity measures, is dampening sentiment and could put further pressure on the economy.

In the USA, the economy remained extremely robust in 2024 and grew by more than 2 per cent. Inflation fell less sharply than expected and stood at around 2.7 per cent in December. The Federal Reserve Bank reacted cautiously and only lowered the Fed Funds Target Rate to 4.5 per cent.

China's industry, like that in Europe, is in crisis. In addition, the long-standing problems in the property market have recently worsened: Work on many unfinished buildings is at a standstill throughout the country and many new buildings are currently unsaleable. China is trying to compensate for the difficult situation with an export offensive, which is often supported by dumping prices.

The increase in tariffs announced by the new US President Trump poses a challenge for China and the global economy. Depending on the specific implementation of this measure and the level of the tariffs, they could further exacerbate the already tense economic situation and place a considerable burden on global trade.

The bond markets were characterised by high volatility in 2024 but were largely unchanged at the end of the year. Austrian government bonds with a ten-year term yielded 2.8 per cent both at the beginning and at the end of the year. Italian government bonds performed positively, while French bonds were weaker.

Record gains were recorded on the global stock markets in 2024, particularly in the USA. The S&P rose by 34 per cent, the MSCI by 25 per cent, the DAX by 18 per cent and the Austrian leading index ATX by 12 per cent.

#### **UNIQA Group**

With a premium volume written including savings portions from unit-linked and index-linked life insurance of €7,839.7 million, the UNIQA Group is among the leading insurance groups in Central and Eastern Europe.

#### **UNIQA** in Europe

UNIQA offers its products and services via all distribution channels (hired sales force, general agencies, brokers, banks and direct sales) and covers virtually the entire range of insurance lines. UNIQA is the second largest insurance group in Austria. In the growth region of Central and Eastern Europe, UNIQA has a presence in 14 countries: Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Czechia, Hungary, Kosovo, Montenegro, North Macedonia, Poland, Romania, Serbia, Slovakia and Ukraine. In addition, insurance companies in Switzerland and Liechtenstein are also part of the UNIQA Group.

The listed holding company UNIQA Insurance Group AG manages the Group and also operates the indirect insurance business concluded as active reinsurance with another insurance company. Moreover, UNIQA Insurance Group AG carries out numerous service functions for UNIQA Österreich Versicherungen AG and its international Group companies, in order to take best advantage of synergy effects and to implement the Group's long-term corporate strategy consistently.

#### Property and casualty insurance

The property and casualty insurance line includes property insurance for private individuals and companies, as well as private casualty insurance. The UNIQA Group received premiums written in property and casualty insurance in the amount of €4,678.3 million in 2024 (2023: €4,214.3 million) – which is 59.7 per cent (2023: 58.7 per cent) of total premium volume. The largest share by far in the volume of property and casualty insurance comes from private consumer business. Most property and casualty insurance policies are taken out for a limited term of up to three years. A broad spread across the different risks of a great many customers and the relatively short terms of these contracts lead toonly moderate capital requirements and also make this business segment attractive as a result.

#### Health insurance

Health insurance in Austria includes voluntary health insurance for private customers, commercial preventive healthcare and opt-out offers for certain independent professions such as lawyers, architects and chemists. Although health insurance is still at the early stages in CEE, increased levels of prosperity in the region make the long-term growth potential even greater. Group-wide, premiums written totalled €1,526.5 million in 2024, (2023: €1,388.1 million) – which is 19.5 per cent (2023: 19.3 per cent) of total premium volume. UNIQA is the undisputed market leader in this strategically important business line in Austria, with around 44 per cent of market share. The overwhelming majority comes from Austria with around 91 per cent of premiums, with the remaining 9 per cent from international business.

#### Life insurance

Life insurance covers economic risks that stem from the uncertainty as to how long a customer will live. It includes savings products such as classic and unit-linked life insurance. There are also biometric products which hedge against risks such as occupational disability, long-term care needs or death. The life insurance business model is structured towards the long term. The average term is 25 years. In life insurance, UNIQA reached a premium volume (including savings portions from unit-linked and index-linked life insurance) of €1,634.9 million Group-wide in 2024 (2023:€1,583.3 million) – which is 20.9 per cent (2023: 22.0 per cent) of total premium volume.

# Companies included in the IFRS consolidated financial statements

In addition to the annual financial statements of UNIQA Insurance Group AG, the consolidated financial statements include the financial statements of all subsidiaries in Austria and abroad as well as those of the investment funds under the Group's control. The basis of consolidation – including UNIQA Insurance Group AG – comprised 34 Austrian (2023: 32) and 61 international (2023: 61) subsidiaries as well as 4 Austrian (2023: 4) and 9 international (2023: 9) controlled pension and investment funds. The associates are 4 Austrian companies (2023: 4) that were included in the consolidated financial statements using the equity method of accounting.

Details on the consolidated companies and associates are contained in the corresponding overviews in the consolidated financial statements. The accounting and measurement methods are also described in the consolidated financial statements.

#### Risk reporting

UNIQA's comprehensive risk report is included in the notes to the 2024 Consolidated Financial Statements.

#### **Corporate Governance Report**

Since 2004, UNIQA has pledged to comply with the Austrian Code of Corporate Governance. UNIQA publishes its consolidated Corporate Governance Report at www.uniqagroup.com in the Investor Relations section.

#### **Discontinued operations**

In accordance with the provisions of IFRS 5, all values attributable to the Russian business were recognised in the consolidated income statement (including the comparative period) in the profit/(loss) from discontinued operations (after tax).

#### **Group business development**

- Premiums written (including savings portions from unitlinked and index-linked life insurance) rose by
   9.1 per cent to €7,839.7 million
- Technical result at €560.5 million
- Combined ratio (gross) increased from 89.4 per cent to 91.1 per cent
- Combined ratio improved from 92.8 per cent to 93.1per cent
- Financial result increased to €210.2 million
- Earnings before taxes in 2024 increased by 3.6 per cent to € 441.9 million
- Proposed dividend of €0.60 per share for 2024

#### **Changes in premiums**

UNIQA's total volume of premiums written increased in 2024. Taking into account the savings portions from unit-linked and index-linked life insurance, the volume climbed 9.1 per cent to €7,839.7 million (2023:€7,185.6 million). The main driver for this was the solid growth in both property and casualty insurance and in health insurance.

# Premiums written, including savings portions from unit-linked and index-linked life insurance In € million

 business development (2023: $\@ifnextchicklime{1}$ ,388.1 million). In life insurance, premiums written including savings portions from unit-linked and index-linked life insurance rose by 3.3 per cent to  $\@ifnextchicklime{1}$ ,584.9 million (2023: $\@ifnextchicklime{1}$ ,583.3 million).

#### Change in insurance revenue

The UNIQA Group's insurance revenue rose in 2024 by 9.4 per cent to €6,557.2 million (2023: €5,994.1 million).

The release of the contractual service margin (CSM) amounted to €336.8 million in total (2023: €318.9 million).

In health insurance, insurance revenue in the reporting period rose by 9.8 per cent to €1,355.8 million (2023: €1,234.7 million). The release of the contractual service margin increased by 11.9 per cent to €105.9 million (2023: €94.7 million).

Insurance revenue in life insurance increased by 3.5 per cent to €779.6 million in 2024 (2023: €753.1 million). The release of the contractual service margin increased by 2.9 per cent to €197.7 million (2023: €192.2 million).

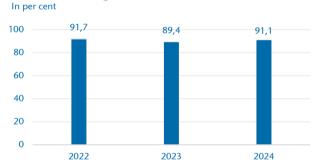

#### Change in insurance service expenses

Insurance service expenses in the UNIQA Group rose in 2024 by 11.5 per cent to €5,900.4 million (2023: €5,291.0 million). The main drivers for this were very high burdens from natural catastrophes.

The overall cost ratio – the ratio of direct and indirect costs to insurance revenue – nevertheless rose marginally to 31.2 per cent (2023: 31.0 per cent). The administrative cost ratio was 15.9 per cent in 2024 (2023: 15.7 per cent).

Insurance service expenses in property and casualty insurance increased by 12.5 per cent to &4,029.8 million (2023: &3,580.8 million). The cost ratio dropped to 31.6per cent (2023: 31.9 per cent). The combined ratio (gross before reinsurance) nevertheless increased to 91.1 per cent (2023: 89.4 per cent) due to the significant impact from natural catastrophes. The combined ratio (net after reinsurance) rose to 93.1per cent (2023: 92.8 per cent).

#### Combined ratio (gross before reinsurance)

In health insurance, insurance service expenses grew by 13.1 per cent to €1,255.2 million in 2024 (2023: €1,110.3 million). The cost ratio in this segment increased to 18.4 per cent (2023: 18.2 per cent).

In life insurance, insurance service expenses rose by 2.6 per cent to  $\[ \]$  615.4 million (2023:  $\[ \]$  600.0 million). The cost ratio in life insurance increased to 50.7 per cent (2023: 46.9 per cent).

#### Technical result from reinsurance

The technical result from reinsurance in 2024 amounted to €-96.3 million (2023: €-140.9 million).

#### Technical result

In 2024, the technical result of the UNIQA Group (see Note 5 in the consolidated financial statements) nevertheless remained at nearly the level of the previous year at € 560.5 million (2023: € 562.2 million).

#### Financial result

Net investment income increased in 2024 to €749.7 million due to the excellent current income (2023: €588.8 million). The financial result increased to €210.2 million as a result (2023: €150.2 million). Due to the recognition of the equity-accounted holding in the construction firm STRABAG SE, there was a positive contribution in the amount of €119.7 million in 2024 (2023: €76.0 million).

Net investment income from unit-linked and index-linked life insurance amounted to €333.0 million in 2024 (2023: €306.0 million).

A detailed description of the financial result can be found in the consolidated financial statements (see Note 4 in the consolidated financial statements).

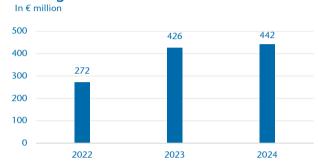

#### Non-technical result

The non-technical result amounted to €-254.5 in 2024 (2023: €-206.4). Other income sank by 2.5 per cent to €425.2 million (2023: €436.1 million), while other expenses increased by 5.8 per cent to €679.6 million (2023: €642.5 million).

#### **Earnings before taxes**

Operating profit grew by 2.0 per cent to € 516.2 million due to the increased financial result (2023: € 506.1 million). The UNIQA Group's earnings before taxes increased accordingly by 3.6 per cent to € 441.9 million (2023: € 426.4 million).

#### **Earnings before taxes**

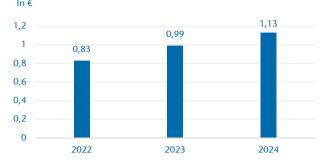

In property and casualty insurance, earnings before taxes increased to €281.0 million (2023: €211.5 million), while in health insurance they declined by 76.6 per cent to €10.3 million (2023: €44.1 million). Lastly, in life insurance, earnings before taxes fell by 11.9 per cent to €150.5 million (2023: €170.8 million).

Income tax expense decreased in 2024 to €93.7 million (2023: €103.2 million). In consequence, the tax burden in 2024 declined to 21.2 per cent (2023: 24.2 per cent).

The profit/(loss) for the period from continuing operations amounted to € 348.2 million (2023: € 323.1 million). Due to the sale of the Russian business, the company incurred a loss from discontinued operations (after tax) in the amount of € 2.3 million in 2024 (2023: € –19.3 million). As a result, the profit/(loss) for the period was € 350.5 million (2023: € 303.8 million).

Consolidated profit/(loss) (proportion of the profit/(loss) for the period attributable to the shareholders of UNIQA Insurance Group AG) increased by 14.9 per cent to €347.6 million (2023: €302.7 million). The earnings per share rose to €1.13 (2023: €0.99). The earnings per share from continuing operations was €1.13 in 2024 (2023: €1.05).

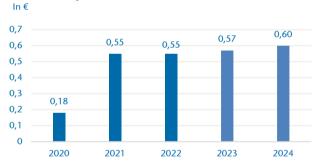

#### Earnings per share

The return on equity (after taxes and non-controlling interests) fell slightly to 12.4 per cent in the reporting year (2023: 13.2per cent).

On this basis, the Management Board will propose to the Supervisory Board and the Annual General Meeting the distribution of a dividend of  $\le$  0.60 per share (2023:  $\le$  0.57 per share).

#### Dividend per share

#### Own funds and total assets

Total equity attributable to the shareholders of UNIQA Insurance Group AG increased by €179.5 million to €2,889.7 million in the past financial year (31 December 2023:€2,710.2 million). Non-controlling interests amounted to €51.7 million (31 December 2023: €19.9 million). The Group's total assets came to €28,532.1 million as at 31 December 2024 (31 December 2023: €28,151.0 million).

#### Change in contractual service margin

The contractual service margin as at 31 December 2024 increased to €5,345.6 million (31 December 2023: €5,266.3 million). In property and casualty insurance, the CSM increased to €93.9 million (31 December 2023: €61.9 million) and in health insurance to €3,501.0 million (31 December 2023: €3,366.2 million). In life insurance, on the other hand, it fell to €1,750.6 million (31 December 2023: €1,838.2 million).

#### Consolidated statement of comprehensive income

The profit/(loss) for the period in 2024 was €350.5 million (2023: €303.8 million). Due to effects resulting especially from the valuation of government and corporate bonds, the other comprehensive income in the reporting period fell to €9.4 million (2023: €699.3 million). Total comprehensive income thus amounted to €359.8 million (2023: €1,003.1 million).

#### **Consolidated Statement of Cash Flows**

UNIQA's net cash flow from operating activities amounted to  $\[ \]$  580.7 million in 2024 (2023:  $\[ \]$  325.3 million). Cash flow from investment activities amounted to  $\[ \]$  -488.0 million (2023:  $\[ \]$  41.0 million). Net cash flows from financing activities amounted to  $\[ \]$  -153.7 million (2023:  $\[ \]$  -333.7 million). Overall, cash and cash equivalents decreased by  $\[ \]$  -62.4 million to  $\[ \]$  637.1 million in the 2024 financial year (2023:  $\[ \]$  6699.5 million).

#### **Employees**

The average number of employees (full-time equivalents, or FTEs) at UNIQA in 2024 rose to 15,131 FTEs (2023: 14,629). This includes 3,797 FTEs (2023: 3,798) as field sales employees. The number of employees in administration amounted to 11,333 FTEs (2023: 10,831).

In the Central Europe (CE) region – Poland, Slovakia, Czechia and Hungary – the Group employed an average of 5,059 FTEs in 2024 (2023: 4,963), while 2,232 FTEs (2023: 2,197) were employed in the Southeastern Europe (SEE) region – Albania, Bosnia and Herzegovina, Bulgaria, Kosovo, Croatia, Montenegro, North Macedonia and Serbia – and 1,494 FTEs (2023: 1,447) in the Eastern Europe (EE) region of Romania and Ukraine. The average number

of FTEs in the other markets in 2024 was 81 (2023: 114). A total of 6,265 FTEs were employed in Austria (2023: 5,908).

# Earnings before taxes – UNIQA International

In € million

In the Central Europe region (CE) – Poland, Slovakia, Czechia and Hungary – earnings before taxes in the 2024 financial year decreased by 2.6 per cent to €191.6 million (2023: €196.8 million). In Eastern Europe (EE) – consisting of Romania and Ukraine – they fell to €34.4 million (2023: €37.8 million). In Southeastern Europe (SEE) – comprising Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Kosovo, Montenegro, North Macedonia and Serbia – the earnings before taxes in the 2024 financial year declined to €26.1 million (2023: €32.9 million). In Western Europe (WE), earnings before taxes amounted to €–1.0 million (2023: €0.3 million).

### Reinsurance

Reinsurance key figures In € million	2024	2023	2022
Insurance revenue	1,264.4	1,124.8	1,015.4
Insurance service expenses	-1,234.9	-1,034.4	-938.1
Technical result from reinsurance	-7.8	-55.5	-5.3
Technical result	21.8	34.9	72.0
Financial result	62.0	60.5	-43.3
Net investment income	90.7	100.8	-44.8
Non-technical result	2.1	-0.7	-1.2
Earnings before taxes	80.1	89.4	24.5

### Change in insurance revenue

The insurance revenue from the reinsurance segment rose in 2024 by 12.4 per cent to  $\[ \]$  1,264.4 million (2023:  $\[ \]$  1,124.8 million).

## Change in insurance service expenses

Insurance service expenses in 2024 increased by 19.4 per cent to €1,234.9 million (2023: €1,034.4 million).

#### Technical result from reinsurance

The technical result from reinsurance in 2024 improved to €-7.8 million (2023: €-55.5 million).

### **Technical result**

The technical result in the reinsurance segment declined in 2024 to  $\$  21.8 million 2023:  $\$  34.9 million).

### Financial result

### Non-technical result

The non-technical result amounted to €2.1 million in 2024 (2023: €-0.7 million).

### **Earnings before taxes**

The operating profit dropped by 9.4 per cent to €85.9 million due to the decline in the technical result (2023: €94.8 million). Earnings before taxes in the reinsurance segment decreased to €80.1 million (2023: €89.4 million).

# **Group functions**

Group functions key figures	2024	2023	2022
Financial result	548.6	472.6	280.4
Non-technical result	-68.8	-50.8	-32.7
Earnings before taxes	414.8	356.4	186.8

In the Group functions segment, the financial result rose by 16.1 per cent to  $\$ 548.6 million in 2024 (2023:  $\$ 472.6 million).

The non-technical result in this segment amounted to €-68.8 million (2023: €-50.8 million).

Earnings before taxes increased to €414.8 million in the 2024 financial year as a result (2023: €356.4 million).

### Consolidation

Consolidation key figures	2024	2023	2022
Technical result	3.7	-12.6	4.4
Financial result	-642.0	-588.9	-283.0
Net investment income	-576.5	-734.5	-175.3
Non-technical result	3.1	15.7	-3.9
Earnings before taxes	-580.4	-528.6	-210.7

In the consolidation segment, the technical result in 2024 amounted to  $\$  3.7 million (2023:  $\$ -12.6 million).

The financial result fell to €-642.0 million in the 2024 financial year (2023: €-588.9 million). Net investment income amounted to €-576.5 million (2023: €-734.5 million).

The non-technical result was positive at  $\le 3.1$  million (2023:  $\le 15.7$  million).

As a result, earnings before taxes in the consolidation segment amounted to €-580.4 million (2023: €-528.6 million).

## Significant events after the reporting date

### STRABAG – Court judgement in Kaliningrad (Russia)

On 20 January 2025, a Russian special court handed down a judgement against STRABAG SE (Villach, (STRABAG)) and the core shareholders of the STRABAG syndicate, which also includes UNIQA. In the judgement, however, the court only ordered AO Raiffeisenbank (Russia, Moscow) to pay around €2 billion in damages to MKAO "Rasperia Treiding Limited" (Russia, Kaliningrad, (Rasperia)) and in return granted it the STRABAG shares held by Rasperia. UNIQA does not hold a stake in AO Raiffeisenbank, which means there are no direct effects on UNIQA. The judgement is not enforceable in Austria due to existing EU sanctions. Irrespective of this, UNIQA will be appealing against the judgement. From the current perspective, there are therefore no significant effects on UNIQA's assets, earnings and financial condition.

### **Outlook**

### **Economic development**

The downturn in the industrial sector is expected to continue in the first half of 2025. In contrast, the service sector, which accounts for a significantly larger share of the economy, is likely to grow strongly. For Germany and Austria, the International Monetary Fund (IMF) is forecasting an end to the recession by 2025, driven by rising incomes, higher savings rates and a stable labour market. If consumer sentiment improves, growth rates could even exceed the currently forecast figures of 1.1 per cent for Austria, 0.3 per cent for Germany and 1.0 per cent for the eurozone.

The labour market remains robust with an unemployment rate of around 6.5 per cent in the eurozone, while in Austria the figure is likely to settle at 5.3 per cent in 2025 according to the IMF.

The European Central Bank (ECB) will still need to help support the economy by cutting interest rates. The market expects further cuts totalling 100 basis points by the end of 2025, which would ultimately bring the discount rate to between 1.5 and 2 per cent.

Significantly stronger economic growth is expected in the eastern EU countries in 2025. Poland could grow by 3.5 per cent, Hungary by just under 3 per cent and Czechia by 2.3 per cent. Inflation in these countries is also likely to

stabilise. According to current estimates, inflation in Poland and Hungary is likely to hover around the 4 per cent mark, while in Czechia it could even be as low as 2 per cent.

Nevertheless, risks remain, particularly due to geopolitical uncertainties such as the Ukraine conflict, tensions in the Middle East and possible disruptions in the Suez Canal. Economic development will also depend heavily on the tariff measures announced by the USA. Depending on their extent, they could dampen the global economy and increase inflation. The Fed will therefore probably only make one or two interest rate cuts totalling a maximum of 50 basis points. Against this backdrop, the US economy is likely to grow at a rate of 2.7 per cent in 2025 – with an inflation rate of just over 2 per cent.

In Europe, the issue of budget consolidation will remain in the spotlight, particularly in countries such as France, Italy and Austria.

Whether the stock markets can continue their strong performance of 2024 is questionable in view of high valuations, particularly in the USA. However, given the interest rate cuts, rising growth and tax cuts in the USA, the conditions are generally favourable. However, a positive trend is expected for the European bond markets, with yields falling slightly by the end of the year.

### **Business outlook**

For the 2025 financial year, the first of our enhanced strategic programme "UNIQA 3.0 – Growing Impact", our focus remains on improving our core underwriting business and profitability in Austria as well as on profitable growth in our CEE markets. Our expectations of strong growth above GDP are based on both targeted sales activities and restatements in connection with inflation and index developments.

Due to the unstable geopolitical and economic conditions and the trend towards increasing weather-related damage, any forecast for future business development is subject to uncertainty. Subject to significant negative influences from natural catastrophes and distortions on the capital market, UNIQA is targeting a further improvement in profitability for 2025.

With a target payout ratio of 50 to 60 per cent, we continue to strive for a progressive and attractive profit-sharing scheme for our shareholders.

# Information pursuant to Section 243a(1) of the Austrian Commercial Code

- The share capital of UNIQA Insurance Group AG amounts to €309,000,000 and consists of 309,000,000 no-par-value bearer shares, which each carry equal interest in the company's share capital. €285,356,365 of the share capital was fully paid in cash and €23,643,635 was paid in non-cash contributions. All shares confer the same rights and obligations.
- The shares held by UNIQA Versicherungsverein Privatstiftung, Austria Versicherungsverein Beteiligungs-Verwaltungs GmbH, Collegialität Versicherungsverein Privatstiftung and RZB Versicherungsbeteiligung GmbH are linked in terms of voting rights. Reciprocal purchase option rights have been agreed among these shareholders.
- Raiffeisen Bank International AG holds indirectly, via RZB – BLS Holding GmbH and RZB Versicherungsbeteiligung GmbH, a total of about 10.87 per cent (allocated in accordance with the Austrian Stock Exchange Act) of the company's share capital; UNIQA Versicherungsverein Privatstiftung holds directly and indirectly through Austria Versicherungsverein Beteiligungs-Verwaltungs GmbH a total of about 49.00 per cent (allocated in accordance with the Austrian Stock Exchange Act) of the company's share capital.
- No shares with special control rights have been issued.
- The employees who have share capital exercise their voting rights directly.
- There are no provisions of the Articles of Association or other provisions that go beyond the statutory provisions for appointing Management Board and Supervisory Board members or for modifying the Articles of Association, with the exception of the rule that, when a Supervisory Board member turns 70 years of age. They must retire from the Supervisory Board as of the end of the next Annual General Meeting.
- The Management Board is authorised to increase the company's equity capital up to and including 30 June 2029 with the approval of the Supervisory Board by a total of no more than €80,000,000 by issuing up to 80,000,000 no-par-value bearer or registered shares conferring voting rights in exchange for payment in cash or in kind, one time or several times. The Management Board is further authorised until 6 December 2025 to buy back up to 30,900,000 treasury shares (together with other treasury shares that the company has already acquired and still possesses) through the company and/or through subsidiaries of the company (Section 66 of the Stock Corporation Act). The company held 2,034,739

treasury shares as at 31 December 2024. 1,215,089 Treasury shares are held through UNIQA Österreich Versicherungen AG. This share portfolio resulted from the merger in 2016 of BL Syndikat Beteiligungs Gesellschaft m.b.H. as the transferring company, with UNIQA Insurance Group AG as acquiring company (payment of portfolio in UNIQA shares to shareholders of BL Syndikat Beteiligungs Gesellschaft m.b.H.). This share portfolio is not to be included in the highest number of treasury shares.

- Corresponding agreements with other shareholders of STRABAG SE are in place concerning the holding in this company.
- No reimbursement agreements exist for the event of a public takeover offer.

# Disclosures required under Section 243a(2) of the Austrian Commercial Code

The internal control and risk management system at UNIQA Insurance Group AG is comprised of transparent systems that encompass all company activities and include a systematic and permanent approach, based on a defined risk strategy, with the following elements: identification, analysis, measurement, management, documentation and communication of risks, as well as the monitoring of these activities. Identification, analysis, measurement, management, documentation and communication of risks and monitoring of these activities. The scope and orientation of these systems were designed on the basis of companyspecific requirements. Despite creating appropriate frameworks, there is always a certain residual risk because even appropriate and functional systems cannot guarantee absolute security with regard to the identification and management of risks.

## Objectives:

- Identification and measurement of risks that could obstruct the goal of producing (consolidated) financial statements that comply with regulations
- To limit recognised risks, for example by consulting with external specialists
- Review of external risks with regard to their influence on the consolidated financial statements and the corresponding reporting of these risks

The aim of the internal control system in the accounting process is to guarantee sufficient security by means of implementing controls so that, despite identified risks, proper financial statements are prepared. Along with the risks described in the Risk Report, the risk management system also analyses additional risks within internal business processes, compliance, internal reporting, etc.

### Organisational structure and control environment

The company's accounting process is incorporated into the UNIQA Group accounting process. In addition to the SAP S/4HANA accounting system, a harmonised insurance-specific IT system is also used for the company's purposes. Compliance guidelines and manuals for company organisation, accounting and consolidation exist for the purpose of guaranteeing secure processes.

### Identification and control of risks

An inventory and appropriate control measures were conducted to identify existing risks. The type of controls was defined in the guidelines and instructions and coordinated with the existing authorisation concept.

The controls include both manual coordination and comparison routines, as well as the acceptance of system configurations for connected IT systems. New risks and control weaknesses in the accounting process are quickly reported to management so that it can undertake corrective measures. The procedure for the identification and control of risks is evaluated on a regular basis by an external independent auditor.

### Information and communication

Deviations from expected results and evaluations are monitored by means of monthly reports and key figures, and they form the foundation of information provided to management on an ongoing basis. The management review that is based on this information, and the approval of the processed data, form the foundation of further treatment in the company's financial statements.

### Measures to ensure effectiveness

Rather than being made up of static systems, the internal control and risk management system is adjusted on an ongoing basis to changing requirements and general conditions. The identification of the necessity of changes requires constant monitoring of the effectiveness of all systems. The foundations for this are:

- Regular self-evaluations by the persons tasked with controls
- Evaluations of key data to validate transaction results in relation to indications that suggest control deficiencies
- Random tests of effectiveness by the Internal Audit department and comprehensive efficacy tests by the Internal Audit department and/or special teams

### Reporting to the Supervisory Board/Audit Committee

In the context of compliance and internal control and risk management systems, the Management Board reports regularly to the Supervisory Board and the Audit Committee by means of Internal Audit department reports and the separate engagement of external auditors.

### Proposed appropriation of profit

The separate financial statements of UNIQA Insurance Group AG prepared in accordance with the Austrian Commercial Code (UGB) and the Insurance Supervision Act (VAG) show a net profit of  $\in$  188,144,477.23 for the 2024 financial year (2023:  $\in$  176,789,324.96). The Management Board will propose to the Annual General Meeting on 2 June 2025 that this profit be used for the distribution of a dividend of  $\in$  0.60 for each of the 309,000,000 entitled no-par-value bearer shares issued as of the reporting date and to carry the remaining amount forward to new account.

# (Consolidated) Non-Financial Report

### **ABOUT THIS REPORT**

This declaration was prepared in accordance with the Austrian Sustainability and Diversity Improvement Act (NaDiVeG, EU Directive 2014/95/EU) and covers those sustainability concerns that also reflect the material sustainability topics of UNIQA.

Section 267a of the Austrian Commercial Code (UGB) sets forth a series of topics the UGB non-financial report is required to address — irrespective of the reporting standard applied — to the extent required to understand the impacts of the undertaking's activities. The topics in question are presented in this report, in particular, in sections E1 (Environmental matters), S1 and S2 (Labour and social matters), S1, S2 and S4 (Respect for human rights) and G1 (Prevention of corruption and bribery).

### SUSTAINABILITY STATEMENT

The following consolidated sustainability reporting was prepared in accordance with Art. 29a of Directive 2013/34/EU (Accounting Directive) and thus in accordance with the ESRS and Regulation 2020/852 (EU Taxonomy Regulation).

# 1. General information

# 1.1 GENERAL BASIS FOR PREPARATION OF SUSTAINABILITY STATEMENTS (BP-1)

The sustainability statement for 2024 was prepared on a consolidated basis and comprises all fully consolidated Group companies of the UNIQA Group. The scope of consolidation is therefore the same as for the consolidated financial statements.

When assessing the materiality of and managing impacts, risks and opportunities, UNIQA examines its own business operations as well as the entire upstream and downstream value chain. Issues identified in the upstream value chain primarily pertain to suppliers for UNIQA's operations. The most important aspects related to sustainability issues in the downstream value chain are in the area of the investment portfolio (own investments and investments of third-party funds) and that of the insurance customers.

# 1.2 DISCLOSURES IN RELATION TO SPECIFIC CIR-CUMSTANCES (BP-2)

### 1.2.1 Time horizons

In deviation from the time horizons proposed in ESRS 1 section 6.4, UNIQA has adopted the following time intervals for sustainability reporting:

- Short-term time horizon: one year
- Medium-term time horizon: from the end of the shortterm reporting period up to ten years
- Long-term time horizon: more than ten years

In contrast to ESRS, the time horizons were selected in order to reflect the long-term orientation of the insurance business and the terms of the insurance contracts.

# 1.2.2 Value chain estimates, sources of estimation and outcome uncertainty

Due to the limited available information and data on the upstream and downstream value chain, estimates need to

be employed for individual topics and data points. However, the use of estimates can lead to differences relative to the actual data. For UNIQA, improving the quality of data on an ongoing basis is a matter of great importance. Data from players in the upstream and downstream value chain is supplemented by data from external providers where necessary.

Further details on estimates, sources of estimation and outcome uncertainty can be found in the description of the corresponding metric.

# 1.2.2.1 Science Based Targets initiative (SBTi) targets & target progress

The emission factor applied to calculate the financed emissions for the "Project finance for electricity generation" asset class is based on average figures for the respective energy sources. Data regarding emissions and energy produced are based on projected values from the project operators, who estimate them using their own methods.

# 1.2.2.2 Weighted average carbon intensity (WACI) of the investment portfolio

Data on Scope 1 and Scope 2 emissions used to calculate the emissions intensity metric are provided by the external data provider Institutional Shareholder Services Inc. (ISS), and are largely based on data reported by the respective emitters. ISS and the Swiss Federal Institute of Technology have developed their own methodology for estimating emissions data not reported directly by entities. As a first step, non-reporting entities are compared with similar entities in the same sub-sector which serve as benchmarks on the basis of an industry classification system based on their emissions profile. In a second step, a statistical regression analysis is carried out on the basis of the sub-sectors in order to determine various financial indicators which provide estimates for the emissions data. To improve the forecasting reliability of the models, ISS compares newly reported data with previously estimated data through back testing. If significant deviations are identified, ISS recalculates the regression models to continuously improve the results and models.

In order to ensure that the data received applies to the UNIQA portfolio, the ESG team from capital investment assesses the plausibility of the data.

# 1.2.2.3 Financed emissions (investments in companies)

Financed Scope 1 and Scope 2 emissions from investments in listed companies, corporate bonds (excluding debt securities) and corporate loans are also sourced from ISS and are largely based on reported data from the respective issuers. Data on Scope 1 and Scope 2 emissions that does not constitute reported data is estimated by ISS with the application of its own models, taking into account sub-sector and activity levels. Data coverage came to 82 per cent in 2024. Data for financed Scope 3 emissions is also based on ISS data. ISS uses its own models to model financed Scope 3 emissions, applying sector-specific criteria across the supply chains of emitters. A sector-specific life cycle assessment is also performed to model Scope 3 emissions stemming from the use phase of the emitter's product or service.

UNIQA validates the data received to check that it applies to the UNIQA portfolio. The annual percentage change in the metrics for each emitter is determined based on ISS data as part of the plausibility checks for the most important ESG metrics. Statistical models that employ normal distributions and Z-values are used to identify outliers

The values of these outliers are compared against the values from the ISS online platform and reports produced by the undertaking in question.

In the event of deviations, UNIQA contacts ISS to investigate the deviations. If ISS's reasoning behind deviations is not deemed satisfactory, the ESG team from capital investment decides whether the data is applicable and may amend it manually.

### 1.2.2.4 Financed emissions (government bonds)

Financed Scope 1 emissions from investments in government bonds are calculated using the Partnership for Carbon Accounting Financials (PCAF) methodology from the UNFCCC (United Nations Climate Framework Convention) database and cover 99 per cent of direct investments in government bonds. Emissions data from countries that do not update their data on an annual basis are estimated using climate-relevant data from research institutes, government agencies and international organisations.

Emissions data on Scope 2 and Scope 3 emissions is sourced from the Organisation for Economic Co-operation and Development (OECD), which collects data on greenhouse gas (GHG) emissions produced by international trade. Sixty-four countries have reported GHG emissions data on this basis. The OECD allocates 137 countries to the

"Rest of the World" category. ISS attributes the GHG emissions from this collective category to individual countries by employing macroeconomic indicators.

# 1.2.2.5 GHG emissions from leased real estate (down-stream)

GHG emissions resulting from the energy consumption of leased real estate (common areas and lettable areas) are calculated using a secondary data model. Consumption is estimated based on the characteristics of the real estate in question, including size, construction year and usage, with the use of country-specific averages.

# 1.2.2.6 Insurance-associated GHG emissions (corporate customers)

Insurance-associated emissions accrued in relation to the corporate customer business are calculated for the property, technology and liability insurance business lines and cover 96 per cent of the relevant premiums. The emissions are calculated in accordance with PCAF Option 1 and Option 3. Emissions from the remaining 4 per cent of premiums are extrapolated.

# 1.2.2.7 Insurance-associated GHG emissions (retail customer motor vehicle business)

At present, it is not possible to definitively calculate the total insurance-associated emissions from the UNIQA portfolio owing to the dependence on vehicle-specific data such as brand, model, annual mileage and  $\mathrm{CO}_2$  emissions. As some of this information is unavailable, UNIQA uses averages from secondary sources. Country-specific emissions are calculated based on the PCAF standard to obtain an overview of the portfolio that is as precise as possible.

Along with the use of estimates based on insufficient information from the value chain, uncertainties may also arise from measurement uncertainties within UNIQA's own operations. The following metrics are particularly affected by this approach:

# 1.2.2.8 Energy consumption and GHG emissions from owner-occupied properties

The consumption data required to determine the energy consumption and GHG emissions can be collected for the financial year only for a portion of the properties occupied by UNIQA. For other owner-occupied properties, the reported figures are made up of consumption data for the financial year, supplemented by estimates based on historical data. In certain cases, annual consumption is determined entirely on the basis of historical data. A secondary data calculation is used where no measured historical data

is available. In this scenario, consumption is calculated on the basis of the floor space of the properties, using averages that take into account the year of construction, the type of property, the location of the property, and the type of air conditioning and heating system. This affects roughly about 30 per cent of owner-occupied properties (based on floor space).

# 1.2.2.9 GHG emissions from vehicles used for company purposes

Consumption data for roughly 92 per cent of the vehicles used for company purposes was calculated on the basis of primary data. Kilometres driven are calculated on the basis of primary data for roughly 63 per cent of the vehicles. For the remaining vehicles, the base data was calculated on the basis of averages due to a lack of information, or incomplete and/or implausible data. The website spritmonitor.de applies averages to estimate consumption data in consideration of the vehicle type, age and propulsion type. The average mileage of the kilometres calculated on the basis of primary data was used to determine the kilometres driven.

1.2.3 The role of the administrative, management, and supervisory bodies (GOV-1) and information provided to, and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies (GOV-2)

UNIQA is governed by the Management Board; the Supervisory Board and its committees are responsible for overseeing the management of the company.

Male and female mem- bers of the Management Board and Supervisory Board	Executive members (Management Board)	Non-executive members (Supervisory Board)
Number of members as of 31/12	7	15
of which male members (%) according to annual average	87.5%	62.8%
of which female members (%) according to annual average	12.5%	37.2%
Average female to male ratio	0.14	0.59

The Supervisory Board is comprised of ten shareholder representatives and five employee representatives. All members of the Supervisory Board elected during the Annual General Meeting have declared their independence under Rule 53 of the Austrian Code of Corporate Governance (ÖCGK). Both Anna Maria D'Hulster and Jutta Kath additionally meet the criteria under Rule 54 of the Austrian Code of Corporate Governance, as they are neither shareholders with a stake of more than 10 per cent nor do they represent the interests of such shareholders.

In one of its guidelines, UNIQA has set the requirements for the professional qualification ("Fit") and personal reliability ("Proper") of the individuals in charge of managing the company or who hold other key functions. The aim of these requirements is to ensure that these individuals remain professionally qualified and personally reliable on the basis of a rules-based procedure. The principle of collective professional qualifications applies in this regard. Both the Management Board and the Supervisory Board have many years of experience in the international insurance business as well as in the banking and information technology sectors at their disposal.

Impacts, risks, and opportunities are monitored on an ongoing basis by the Group ESG Committee, which is made up of four members of the Management Board and the heads of Corporate Business, Retail Business, Legal & Compliance and the Group ESG Office. The Group ESG Committee meets on a quarterly basis and is responsible for the integration of ESG matters into UNIQA's core business. Its most important tasks include the following:

- Strategic definition and continuous development of Group-wide ESG ambitions
- Ongoing monitoring of stakeholders' awareness of environmental and social impacts along with setting the topics to be addressed as focal points in communications with stakeholders
- Adoption of materiality assessment and discussion of material impacts, risks, and opportunities
- ESG target setting and KPI monitoring with regard to material impacts, risks and opportunities
- Supervision of the Group-wide climate strategy and environmental management along with material impacts, risks and opportunities

The Group ESG Office is responsible for coordinating sustainability agendas and reports to the member of the Management Board responsible for People, Brand, Sustainability and Personal Insurance & Asset Management, who also chairs the Group ESG Committee.

Group Finance prepares the notes to the consolidated financial statements along with the Group Management Report and ensures that non-financial disclosures are consistent with the financial disclosures. Group Finance reports to the member of the Management Board responsible for Finance and Risk Management.

ESG experts tasked with the operational and specialist development and implementation of content and measures have been appointed at the Group companies. In 2023, strategic ESG coordinators were integrated into the local organisational structure and governance in all countries and regions in which the UNIQA Group operates.

The Group ESG Committee reports to the Management Board on impacts, risks and opportunities on a quarterly basis. The Management Board receives quarterly reports from the Group ESG Office with updates on the progress of the sustainability strategy, the status of ongoing projects and the climate strategy in order to ensure effective monitoring and oversight. The Management Board also reports to the Supervisory Board on a quarterly basis on progress with respect to material impacts, risks and opportunities, and corresponding targets. The Management Board currently does not take any systematic analyses or assessments of impacts, risks, and opportunities (IROs) into consideration when reviewing and making decisions on material transactions. The Supervisory Board defines the sustainability strategy to be pursued each year and reviews the sustainability strategy in the advisory body of the Audit Committee.

In the financial year, the Group ESG Committee focused on the impacts, risks and opportunities related to climate change mitigation and adaptation with regard to underwriting, investments and own operations. The materiality assessment was also discussed, and the resulting material impacts, risks and opportunities presented and resolved.

With the support of the Group ESG Office, the specialist departments set targets with respect to material impacts,

risks and opportunities. The targets are subject to approval by the member of the Management Board responsible for the department in question, by the Group ESG Committee and, if necessary, by the Management Board. The Group ESG Office grants technical approval and ensures the targets are aligned with Group targets. Progress on target achievement is analysed and interpreted by the specialist departments with the supervision of the Group ESG Office and reported to the Group ESG Committee and the Management Board.

The Management Board has relevant expertise on the climate and sustainability. One member of the Management Board has completed post-graduate studies on the topic of environmental management. The Supervisory Board attends training sessions each year in order to adapt to the ongoing changes in relation to sustainability. The training sessions cover current topics related to risk management and the regulatory environment, with particular attention paid to impacts, risks and opportunities specific to UNIQA.

# 1.2.4 Integration of sustainability-related performance in incentive schemes (GOV-3)

The percentage of remuneration granted to members of the Management Board associated with climate-related considerations came to 18.1 per cent in 2024.

No performance-related remuneration components are included in the remuneration granted to members of the Supervisory Board.

As of July 2024, the share of short-term variable remuneration in annual fixed income is 65 per cent. A certain percentage of the variable remuneration granted by UNIQA is linked to the achievement of sustainability-related targets. The goals and the targets set depend on the type of programme (short-term or long-term variable remuneration component) and on the target group, as outlined in the table below:

Programme	Short-term variable remuneration (STI) – ESG- relevant functions	Short-term variable remuneration (STI)	Short-term variable remuneration (STI)	Long-term variable remuneration (LTI)
			Other executives (members of	
	CEO. CEDO	Members of the Management	the management boards of international insurance

Pursuant to Section 78b(1) of the Stock Corporation Act, the remuneration policy for the Management Board is drawn up by the Supervisory Board, reviewed on an annual basis and submitted to a vote at the Annual General Meeting every four years or in the event of a material change. The current remuneration policy was drawn up by the Supervisory Board on 10 April 2024 and approved at the Annual General Meeting held on 3 June 2024. The remuneration of other managers is governed by the Remuneration

Policy. The Remuneration Policy for UNIQA is subject to approval by the Group Remuneration Committee.

## 1.2.5 Statement on due diligence (GOV-4)

The core elements of due diligence are outlined in the following sections:

# Core elements of due diligence

Section in the report

Section in the report
SRS 2 GOV-2: Information provided to and sustainability matters addressed by the undertaking's administrative,
management and supervisory bodies
ESRS 2 GOV-3: Integration of sustainability-related performance in incentive schemes
ESRS 2 SBM-3: Material impacts, risks and opportunities and their interaction with strategy and business model
ESRS GOV-2: Information provided to, and sustainability matters addressed by the undertaking's administrative, management and supervisory bodies
ESRS 2 SBM-2: Interests and views of stakeholders
ESRS 2 IRO-1: Description of the processes to identify and assess material impacts, risks and opportunities
ESRS E1-2: Policies related to climate change mitigation and adaptation
ESRS S1-2: Processes for engaging with own workforce and workers' representatives about impacts
ESRS S1-1: Policies related to own workforce
ESRS S4-1: Policies related to consumers and end-users
ESRS S4-2: Processes for engaging with consumers and end-users about impacts
ESRS G1-1: Business conduct policies and corporate culture
ESRS G1-2: Management of relationships with suppliers
ESRS 2 SBM-3: Material impacts, risks and opportunities and their interaction with strategy and business model
ESRS 2 IRO-1: Description of the processes to identify and assess material impacts, risks and opportunities
The respective sections on "Impact, risk and opportunity management"
The respective section on "Metrics & targets"

# 1.2.6 Risk management and internal controls over sustainability reporting (GOV-5)

As part of the expanded sustainability reporting, material risks related to sustainability reporting were identified in the financial year on the basis of the internal control system established for financial reporting. The completeness and correctness as well as the consistency of the data and disclosures included in the sustainability reporting were identified as material issues. A CSRD Reporting Manual and standardised templates for the collection of quantitative data ensure that definitions and methods for sourcing reporting information are consistent across the Group. Plausibility and completeness checks were established at the level of the Group companies as well as at the Group level to verify the quantitative disclosures. Standardised checklists are used to check that the report complies with ESRS disclosure requirements. These checklists are used by the Group ESG Office and Group Finance as part of their joint supervision of the report.

The risk heat map, which also incorporates risks related to the sustainability reporting, is reported on a quarterly basis to the CFRO, the Risk Committee and the Supervisory Board. The associated reporting identifies, assesses and visualises material sustainability risks to allow their potential impacts to be presented with transparency. The heat map takes into account both regulatory risks as well as operational, strategic and reputation-related risks that may arise from sustainability reporting. This systematic overview facilitates informed decision-making at the top management level and ensures that appropriate risk mitigation measures can be initiated in a timely manner.

# 1.3 STRATEGY, BUSINESS MODEL AND VALUE CHAIN (SBM-1)

UNIQA offers insurance products for property and casualty insurance, health insurance and life insurance along with other services in Austria and in Central and Eastern Europe. Customers include both retail and corporate customers, who receive support across all sales channels from salaried field staff, general agencies, brokers, bank sales and direct sales. Alongside Austria, UNIQA's main markets are Poland, Czechia and Slovakia.

In addition to the insurance business, UNIQA is an active player in the Austrian healthcare market with the PremiQaMed Group, which provides inpatient and outpatient care for customers.

The breakdown of the number of employees by country in which UNIQA operates is as follows:

	Number of employees
Austria	7,228
Central Europe (CE) Poland, Slovakia, Czechia and Hungary	5,325
Southeastern Europe (SEE) Albania, Bosnia and Herzegovina, Bulgaria, Kosovo, Croatia, Montenegro, North Macedonia and Serbia	2,248
Eastern Europe (EE) Romania and Ukraine	1,500
Other countries (Germany, Liechtenstein, Switzerland)	93
	16,394

The sustainability strategy is based on five key pillars:

### Investment policy based on ESG criteria

Investments constitute an integral part of the activities of UNIQA. The assessment of environmental and social impacts on the assets of UNIQA on an ongoing basis ("outside-in") as well as the assessment of the ecological and social impact of the UNIQA investments ("inside-out") are incorporated into the structure and management of the UNIQA portfolio. The latter point also includes indirect CO<sub>2</sub> emissions. Calculated on the basis of transparent and standardised data and corresponding databases. UNIQA is a member of prestigious networks such as the Principles for Responsible Investments (PRI) led by the UNEP Finance Initiative and the UN Global Compact, the Net-Zero Asset Owner Alliance (NZAOA), and Climate Action 100+, which support the company's commitment to greater sustainability in investment. The climate targets for the investment portfolio are based on the 1.5°C limit pathway agreed at the Paris Climate Conference and have been successfully validated as interim climate targets by the Science Based Targets initiative (SBTi).

# Product policy aligned with ESG criteria featuring sustainable additional benefits

Environmental and social impacts are being integrated into the advisory approach at an increasing rate in order to improve both risk prevention and risk mitigation. Inclusion of these impacts has also necessitated certain product updates. One target in this regard is to offer additional investment opportunities in the life insurance business, with a particular focus on sustainability-orientated products in relation to unit-linked insurance products. Another target is to gradually expand the range of health and property insurance products to promote a sustainable lifestyle and sustainable corporate governance on a broad basis. Supplementary product modules as well as improved consulting quality will also contribute to resource efficiency and bringing down emissions.

### Focus on sustainable operational management

UNIQA's sustainability efforts aim to inspire its customers to act in a more environmentally friendly and socially responsible way. Attention is paid to the application of international certifications and standards in all of the company's activities including in its dealings with suppliers. UNIQA aims to set a good example, particularly with regard to climate targets, and to consistently implement its commitment to continuously reduce  $\rm CO_2$  emissions in its own operations. The climate targets for UNIQA's own operations are based on the 1.5°C limit set in the Paris Agreement. The interim targets for 2030 have been validated by the SBTi.

# Transparent reporting and ongoing independent ratings

UNIQA provides comprehensive, timely and transparent information on its targets and progress with their implementation. Alongside existing reporting processes, this also takes place on the basis of guidelines that arise from the company's membership of ESG networks and its support for various initiatives. In addition to improving transparency with regard to reporting, a dialogue with ESG rating agencies is also actively sought. UNIQA strives to continuously improve its ESG ratings through additional ESG disclosures.

# Committed stakeholder management for greater social and environmental responsibility

UNIQA's management approach includes maintaining an ongoing dialogue with all key stakeholders and their representatives. The key partners in the stakeholder dialogue are as follows:

- Customers and their interest groups
- Representatives of the general public
- Employees
- Investors

The strategies, action plans and targets derived from the five cornerstones are described in more detail in the individual topical standards.

In addition to the five cornerstones, the employees and the corporate culture form the foundation of the UNIQA strategy. One of the focuses set by UNIQA in its strategy is interactions with its own workforce. ESG-orientated governance provides the framework for this.

The core business of UNIQA involves assuming the risks of retail and corporate customers and minimising them through effective risk pooling, pursuing the most profitable investments and distributing profit shares to investors. UNIQA's main value creation lies in the development of insurance products, investments and providing related advice to customers.

In addition to the above primary activities, the value chain within the scope of UNIQA's business activities also involves supporting activities. Related activities pertain to corporate governance, risk management, corporate infrastructure and facility management (operations), human resources (people), finance and accounting, procurement, marketing and IT services in particular. The key elements of the upstream value chain are the suppliers, in particular the asset management partners, as well as the creditors and shareholders. The downstream value chain consists of the sales partners, customers, and companies in which UNIQA invests.

One of the most important input factors for UNIQA's value chain is the employees who take care of the business. By investing in their development, promoting diversity and introducing new working models, the company undertakes not only to improve the capability and performance of its employees, but also to contribute to a more sustainable and equitable future.

# 1.4 INTERESTS AND VIEWS OF STAKEHOLDERS (SBM-2)

According to the sustainability strategy, UNIQA's key stakeholders are its employees, customers, investors and the general public. Nature is categorised as a silent stakeholder.

The approach to stakeholder engagement underscores UNIQA's commitment to actively listening to and engaging with stakeholders. Their viewpoints, concerns and expectations are taken into account in an ongoing dialogue across a wide variety of platforms in order to promote sustainable development overall.

The insights gained from this continuous interaction are reflected in the respective specialist departments, as well as in the Group ESG Office and the Group ESG Committee, and are incorporated into the sustainability strategy, sustainability activities, sustainability reporting, the double materiality assessment as well as projects and (due diligence) processes.

Stakeholder perception of material sustainability issues aligns with the UNIQA Group's priorities and the information presented in this report. Material concerns highlighted by stakeholders pertain to topics that are already incorporated into UNIQA's strategic alignment and accounted for in internal considerations.

Interactions with various stakeholder groups take place through the following platforms:

Stakeholder groups	Dialogue format	Potential impacts on UNIQA
	- Employee appraisals	
	- Surveys and grievance mechanisms	
	- Intranet and email	<ul> <li>Updates to internal strategies/guidelines</li> </ul>
	- Networking and dialogue	- Improvement and action plans
Employees/Works	- Career fairs	- Management announcements
Council/Management Board	<ul> <li>Voluntary engagement programmes</li> </ul>	- Adaptation of material topics
	- Face-to-face and digital customer service	
Customers	- Feedback on social media channels	
	- Customer satisfaction surveys	
Retail customers	- Customer and market analyses	- Improvements to products/services
Corporate customers	- Complaints management	- Updates to marketing strategies
Investors		
	- Face-to-face and digital exchange of information	
Small-scale and private investors	- Annual General Meeting	<ul> <li>Development of plans to improve ESG rating</li> </ul>
Institutional investors	- Participation in conferences	<ul> <li>Updates to internal and external communication on</li> </ul>
Key shareholders	- Ratings and benchmarks	sustainability practices
The general public		
Legislative authorities, regulators

Rating agencies	<ul> <li>Online and social media channels and platforms</li> </ul>	<ul> <li>Alignment of the business model and strategy</li> </ul>
The media	- Industry events	<ul> <li>Value creation and risk mitigation through compliance</li> </ul>
Suppliers	- Supplier meetings	- Adaptation of material topics
	Incorporation of studies and ratings into the materiality	Identification of IROs and determination of ratings or exclusion
Nature	assessment	criteria for investments or underwriting

The outcomes of the ongoing stakeholder dialogue led to strategy revisions in the financial year. For example, a retail sustainability strategy for Austria was developed for the retail business based on the results of the double materiality assessment, with climate change adaptation and inclusion taken into consideration along with other material topics. Human rights issues were more strongly integrated into processes, both in relation to UNIQA's own operations

as well as in the upstream and downstream value chain, including underwriting taxonomy processes and procurement processes.

The results of the involvement of stakeholders in the materiality assessment were presented to the Management Board and discussed as part of a standard report prepared by the Group ESG Office. Relevant interactions with stakeholders are reported to the Group ESG Committee and the Supervisory Board on an ad hoc basis.

# 1.5 MATERIAL IMPACTS, RISKS AND OPPORTUNITIES AND THEIR INTERACTION WITH STRATEGY AND BUSINESS MODEL (SBM-3)

The double materiality assessment identified the topics through which UNIQA has material impacts on people, society or the environment as well as those that may result in material financial risks and opportunities for the company at present or in the future. In the absence of a sector standard for insurance, insurance-specific IROs and relevant information, such as insurance-associated emissions, have been integrated into the respective topic-specific chapters.

Topics and sub- topics	Where in the value chain?	Material (potential) impacts	Material risks or opportunities
E1 – Climate change			
Climate change adaptation	Own operations		The rising number of catastrophic natural events caused by climate change could lead to considerable insurance claims in individual business lines. Even our own real estate and properties are affected by the growing frequency of extreme weather events, which negatively impact UNIQA's assets, liabilities, financial position and profit or loss.
Climate change adaptation	Downstream value chain	By offering certain product features and consulting services, UNIQA helps customers reduce their level of risk to which they are exposed in relation to the impacts of climate change.	Climate change harbours physical and transition risks that can lead to the impairment of assets and negatively impact UNIQA's financial results.
Climate change mitigation	Own operations	Investing in sustainable buildings and vehicle fleets offers potential to improve the GHG emission savings. Integrating ESG-related targets into remuneration systems can promote sustainable decision-making and thereby positively impact corporate governance in the long term.	
Climate change mitigation	Downstream value chain	, ,	Investments in companies from GHG- intensive sectors could become less attractive as a result of the transition to a more sustainable economy, which could negatively impact UNIQA's assets, liabilities, financial position and profit or loss.
Energy	Own operations	, ,	The dependence of operational sites on external energy suppliers represents a potential financial risk in the event of energy crises.
Energy	Downstream value chain	Companies in which UNIQA invests or which are insured by UNIQA have a higher share of non-renewable energy sources in their	Investments in companies from energy- intensive sectors could become less attractive as a result of the transition to a more sustainable economy, which could negatively impact UNIQA's assets, liabilities, financial position and profit or loss.
S1 – Own workforce			Increased costs due to staff shortages spurred by the low attractiveness of social benefits for (potential) workers, or fatalities,

With regard to environmental matters, climate change was found to be a material topic. One reason behind this is the indirect, short, medium, and long-term impacts on the environment and society attributable to investment decisions and insurance benefits.

This categorisation also arises from the climate-related transition risks and physical risks in the insurance business and investments, which could have a greater impact on UNIQA's financial position and performance moving forward. Decarbonisation strategies adopted to date set forth concrete procedures for limiting and ultimately completely withdrawing from contractual relationships concluded with insurance customers that operate in fossil fuel sectors, along with investments in these sectors.

UNIQA views climate change as an opportunity to assist its insurance customers with the transition to a net-zero emissions economy, to adapt to climate change impacts and to develop new business lines with corresponding insurance and consulting services. Anticipated financial impacts could materialise in a reduction in the number of claims related to climate change and in a rise in premium revenues due to the expanded insurance offering.

UNIQA's own operational management results in several direct short- and long-term material impacts with regard to climate change, particularly due to the energy consumption of its own buildings and vehicles. UNIQA counteracts these impacts by gradually decarbonising its vehicle fleet and heating systems, and by switching to electricity produced from renewable energy sources where feasible.

In addition, UNIQA's buildings are exposed to short-term physical climate risks that may intensify in the future. Any resulting damage would financially impact UNIQA.

The aspects of pollution, water and marine resources, biodiversity and circular economy were not classified as material.

As an employer of more than 16,000 employees, UNIQA is affected by numerous key sustainability issues with regard to its own workforce, most of which have short-term effects, such as training or diversity.

In addition, certain issues including sales force training, the loss of key personnel and lack of attractiveness for key personnel may have a long-term impact on UNIQA's financial situation.

UNIQA acknowledges these actual and potential impacts, risks and opportunities, and has developed several strategies and measures to mitigate, pursue or promote them in a targeted manner. These strategies and measures can be roughly broken down into five main pillars:

- Employee experience
- Leadership & learning
- Corporate culture
- Diversity and inclusion
- Data & analytics

In anticipation of the associated requirements of the Corporate Sustainability Due Diligence Directive (CSDDD), the related topical standard "Workers in the value chain" and related topic "Management of relationships with suppliers" (excl. payment practices) were assessed as material with regard to suppliers. The selection of suppliers results in indirect, short- and long-term impacts on the working conditions of their workforce. Targeted measures have already been introduced with the establishment of an onboarding process involving human rights surveys and the Code of Conduct.

Furthermore, the associated standard "Workers in the value chain" was also assessed as material in the downstream value chain of the corporate business on the basis of quantitative analyses and regulatory requirements (minimum social safeguards in the EU taxonomy). This was reflected in the consideration of social aspects in the corporate underwriting strategy as well as the tightening of processes and documentation regarding minimum social safeguards under the EU Taxonomy Regulation.

As a result of the product range offered to retail customers along with the associated consulting, material short- and long-term impacts, risks and opportunities exist with regard to the environment and/or retail customers in relation to the sustainability topics "Climate change", "Information-related impacts on consumers and/or end-users" and "Social inclusion of consumers and/or end-users".

The retail sustainability strategy for Austria lays down priorities on the topic of climate change mitigation and social inclusion. Over the next few years, concrete measures for the achievement of these strategic targets will be defined.

As an insurance company, UNIQA handles sensitive personal data. Data protection and cybersecurity are therefore sustainability matters that may potentially have material impacts on insurance customers. A data protection management standard governs the allocations of tasks, including the allocation of certain data protection tasks and responsibilities to various organisational units.

With the exception of animal welfare, sustainability matters related to business conduct were deemed essential to UNIQA's own operations. The materiality of these matters primarily concerns short-term impacts in relation to preventing money laundering and corruption, political influence and protecting whistleblowers. These impacts are consistently countered by nurturing the corporate culture, through internal regulations on anti-corruption, whistleblowing and political influence as well as through mandatory training for all employees and the Management Board.

Details on the resilience of the business model and UNIQA locations with regard to impacts, risks and opportunities arising from climate change can be found in the disclosures on ESRS E1. Business continuity plans are drawn up at Group level to ensure that business operations are resilient to staffing gaps. Quarterly employee surveys are performed to track employee satisfaction in order to monitor the social resilience of the business.

Processes and systems for recording and reporting the financial impacts of sustainability matters, especially risks and opportunities, are currently being established.

# 1.6 IMPACTS, RISKS AND OPPORTUNITIES MANAGEMENT

# 1.6.1 Disclosures on the materiality assessment process

# 1.6.1.1 Description of the process to identify and assess material impacts, risks and opportunities (IRO-1) 1.6.1.1.1 Double materiality assessment process

As a first step, the basis of consolidation for the sustainability reporting, all associated business activities and the regions in which they are conducted as well as the stakeholders and business partners involved in these activities were identified. This information was then used to determine the areas in which UNIQA can have an impact or can expect impacts in terms of sustainability.

Business activities have been aggregated into value creation activities that result in similar impacts, risks and opportunities with respect to sustainability matters. These activities encompass the insurance business, investments, UNIQA's own operations, employees, compliance and healthcare.

Topics and sub-topics under ESRS 1 AR 16 provided the basis for the double materiality assessment. These sustainability topics were analysed against the results of the materiality assessment previously conducted on the basis of GRI Standards and compared with topics from established memberships and ESG ratings in order to identify any additional, entity-specific topics. Peer group comparisons were also carried out on the basis of publicly available information on comparable companies. Based on the insights gained from these steps, a list of sustainability topics was drawn up for the detailed analysis of possible impacts, risks and opportunities.

Following on from these analyses, impacts, financial risks and opportunities for each group of economic activities were screened with regard to all sustainability topics with the involvement of internal experts from the relevant departments, and a materiality assessment was carried out using the methodology described in the following paragraphs.

Compliance was responsible for determining the impacts, risks and opportunities in relation to business conduct.

The preliminary results of the double materiality assessment were discussed with stakeholders and the Management Board in order to ensure that the findings determined on a quantitative basis are consistent with the internal and external assessment. Consensus was reached within the Group ESG Committee on the results, and they were subsequently approved by the Management Board.

### 1.6.1.1.2 Methodology

The methodology applied was based on ESRS 1 chapter 3, "Double materiality as the basis for sustainability disclosures", supplemented by guidelines issued by the European Financial Reporting Advisory Group (EFRAG).

The materiality assessment was primarily conducted on the basis of estimations made by internal experts from the specialist departments and stakeholders in workshops supplemented by analyses of publicly available data, in particular data on investments and insurance customers. Sources consulted included approximations of the environmental and, in particular, biodiversity impacts of sectors published in the Exploring Natural Capital Opportunities, Risks and Exposure (ENCORE) database, UNEP-FI data and ESG scores from Swiss Re and the ESG database of ISS.

### Materiality assessment of impacts

The materiality assessment of the impacts is based on the following criteria:

- Scale
- Scope
- · Remediability in the case of negative impacts
- Likelihood in the case of potential impacts

For each positive or negative impact identified, a quantitative classification took place for each of the aforementioned criteria on a five-level scale with a qualitative justification, followed by the calculation of a value combining scale, scope, remediability, if any, and likelihood of occurrence, if any, to determine the material impacts. A separate impact analysis was conducted for up to three different time horizons (short, medium and long term). Once 53.33 per cent of the maximum possible points are reached, an impact is considered material.

UNIQA identifies and measures impacts on climate change by calculating and managing GHG emissions arising from its own operational management (buildings, vehicles) and from key parts of the value chain. The methods employed are based on international standards such as the Greenhouse Gas Protocol (GHG) and the Partnership for Carbon Accounting Financials (PCAF).

A hot-spot analysis was performed to assess the GHG emissions in the value chain, with estimates made for all 15 Scope 3 categories to identify the most material categories. Materiality in this context is determined by the respective level of GHG emissions.

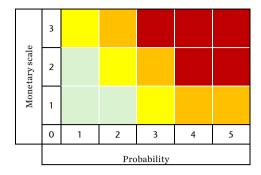

Neither the prioritisation of negative impacts nor prioritisation based on other characteristics take place. The material impacts are integrated into the general risk management process.

### Materiality assessment of risks and opportunities

The materiality assessment of the impacts is based on the following criteria:

- Magnitude
- Likelihood

The materiality of risks and opportunities was determined using the following matrix, with the area marked in dark red indicating materiality:

Risks and opportunities are currently not prioritised on the basis of their source. Risks and opportunities arising from sustainability issues are therefore not prioritised over others, but are integrated into the general risk management process. In the future, opportunities management will be part of a collaborative strategic process between the respective specialist departments and the Group ESG Office.

UNIQA analyses physical and transition climate risks for both the investment portfolio and the corporate underwriting portfolio on the basis of several scenarios.

The qualitative aspects of climate-related opportunities were reviewed as part of the materiality assessment.

1.6.2 Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3) and description of the processes to identify and assess climate-related material impacts, risks and opportunities (IRO-1)

In previous years and in the financial year, the ongoing development of long-term climate scenarios was a main topic in climate risk analysis. A quantitative, group-wide approach was developed that is methodologically consistent with climate-related assumptions in other reports. Both physical risks (risk of natural disaster, physical risk exposure of the companies in which UNIQA invests) and transition risks (climate-related assets) to which the portfolio is exposed were analysed.

In addition, sustainability risks and their potential causes in the operational risk cycle were identified early on (internal control system and risk identification) through critical analyses of various departments and by increasing awareness of sustainability risks throughout the Group. The implementation of upcoming changes resulting from a review of the Solvency II quantitative reporting tem-

plates provided the starting point for the analysis. As a result of these changes, quantitative data on physical risks and transition risks was reported directly to the Austrian Financial Market Authority (FMA) and the European Insurance and Occupational Pensions Authority (EIOPA). The process for evaluating outsourcing risks throughout the Group was also improved and now explicitly takes the sustainability of our outsourcing partners into account. In the previous year, all relevant ESG data was incorporated into the IT risk analysis software. It was therefore possible to monitor the ESG limit utilisation rates on a daily basis in the financial year.

The analysed risks for investments and underwriting can be broken down into physical risks and transition risks. Physical risks include floods, storms and hail events. The potential default risks for corporate bonds and equities arising from sector-specific risks are categorised as transition risks.

### Resilience analysis

Climate change scenarios are included in risk management in order to assess and strengthen resilience to climate-related risks. This comprehensive analysis forms part of the Own Risk and Solvency Assessment (ORSA), which is conducted on an annual basis and involves the assessment of both investments and losses due to natural disasters from insurance contracts under various climate scenarios. UNIQA employs two scenarios to measure climate-related risks: the early action scenario and the no further action scenario. These two scenarios were selected because they represent the two most plausible and relevant extremes (high transition risks & low physical risks; low transition risks & high physical risks). The climate change resilience analysis covers the entire Group with a primary focus on the most important business segments and geographical regions. The analysis of flood and storm risks was prioritised in the climate scenarios. These hazards are geographically extensive, can last for several days and have high potential to cause significant human and economic losses. Hail risks were also analysed due to recent severe hailstorms, especially in Austria. No material physical or transition risks were excluded from the analysis.

Climate X Spectra conducted the analysis of physical risks for investment properties. Each physical risk analysed was assigned a probability of occurrence and degree of severity to represent potential physical and financial impacts. Owner-occupied properties owned by UNIQA were not included in this analysis.

Transition risks were analysed for government and corporate bonds, stocks and real estate. Each position in each asset class was assigned a credit risk on the basis of the economic sector and its transition risk. In addition, the term of each asset class was taken into account when weighting the financial impact of the transition risks.

Early action is based on ambitious climate policies being adopted from the outset, with the aim of limiting global warming to 1.6° C by 2050 and reducing it to 1.5° C by the end of the century. The latest Network for Greening the Financial System (NGFS) "Net Zero 2050" scenario is applied. The macroeconomic assumptions entail an immediate increase in interest rates driven by inflation related to CO<sub>2</sub> prices. This will lead to initial impairment losses, but to a substantial rebound due to the market adjustment prior to 2050. By contrast, the no further action scenario assumes that current policies will continue without additional measures, leading to warming of  $2.5\,^\circ$  C by 2050 and a temperature rise of 3° C by the end of the century. This scenario is based on the NGFS "Current Policy" scenarios and shows a delayed impact on the financial markets compared to the early action scenario with lower shortterm losses but higher long-term physical risks due to the increased occurrence of natural disasters. The resilience analysis for the real estate portfolio was conducted on the basis of climate scenario RCP8.5 (Representative Concentration Pathway 8.5). The worst-case scenario assumes a 3 to 5° C rise in global temperatures. The real estate analysis examines the impact of physical risks between 2020 and 2100. The analysis of transition risks examines the individual positions of the asset classes covered by reference to their term, which differs from the time horizons defined in ESRS 2. The analysis defines a short term as being to the end of 2025, a medium term to 2027, and a long term from 2028 onwards.

The resilience analysis reveals that the early action scenario, characterised by ambitious climate policies, initially leads to impairment due to higher interest rates and impairment of properties, followed by a substantial rebound by 2050. By contrast, the no further action scenario results in lower direct losses with increasing investments by 2050, but poses higher long-term physical risks due to the sharp increase in average annual losses from natural disasters by 2050 compared to the early action scenario. These findings underscore the need for proactive climate policies and increased flood control measures to mitigate future risks. In response, UNIQA plans to focus its strategy on diversifying investments, implementing effective risk mitigation measures and continuously monitoring climate-related risks to ensure long-term sustainability and resilience

A climate risk analysis was carried out in the financial year to assess the risks to investment properties from environmental events. For the taxonomy-eligible properties examined, this analysis showed a financial risk of €7.6 million.

The resilience analysis of transition risks revealed the following anticipated financial impacts for each asset class (reporting date 30 June 2024):

- Government and corporate bonds: approx. €24.9 million (approx. 6 per cent of relevant exposure)
- Stocks: approx. €0.1 million (approx. 20 per cent of relevant exposure)
- Properties: approx. €40 million (approx. 2 per cent of the relevant exposure)

The resilience analysis is used to inform the Management Board by highlighting the need for proactive and flexible measures to mitigate climate-related risks. The early action scenario emphasises the importance of immediate and ambitious climate policies to limit long-term impacts. By contrast, the no further action scenario underscores the severe consequences of inaction, especially in terms of losses from natural disasters.

The in-house physical risk analysis focuses on two pre-defined scenarios released by NGFS and three material physical risks. In addition, all analyses carried out are subject to numerous assumptions and estimates with assumed probabilities of occurrence. Estimated results must therefore be interpreted accordingly. Due to the underlying uncertainties, the results of the physical risk resilience analysis were not integrated into the sustainability strategy.

With the help of the sustainability strategy and the targets and actions it sets forth, UNIQA is able to adapt investments to climate change in the short, medium, and long term. In the short and medium term, there is the risk that opportunity costs may arise as a result of limitations on fossil fuels and nuclear energy.

However, the incremental phase-out of fossil fuels permits a managed transition in order to adapt the portfolio to climate change. For example, the phase-out of crude oil by 2030 and natural gas by 2035 is pursued for direct investments in companies that generate more than 5 per cent of their revenue from the respective fossil fuels. No new direct investments have been made in companies that generate more than 5 per cent of their revenue from the coal business since the financial year.

With the validation of these science-based targets, UNIQA is committed to decarbonising the covered asset classes by 2027 or 2030. In line with the SBTi framework, the targets will also be renewed at five-year intervals according to current plans.

Sustainable investments contribute to the adaptation of investments to climate change with investments in projects such as green bonds and infrastructure projects focused on renewable energy. The current target entails achieving €2 billion in sustainable investments by 2025. This was already achieved in the previous year.

# 1.6.3 Disclosure requirements in ESRS covered by the undertaking's sustainability statement (IRO-2)

As part of the materiality assessment process, the Group ESG Office examines the requirements of each disclosure requirement in detail and, together with the experts from the specialist departments, assesses in qualitative terms whether publishing individual disclosures substantially contributes to clarifying how UNIQA manages material impacts, risks and opportunities in connection with sustainability topics (impact, risk and opportunity management). By adopting this approach, UNIQA ensures that only stakeholder-relevant information is published, while at the same time providing a clear picture of the effectiveness of internal management and risk management systems in the field of sustainability.

Based on the double materiality assessment carried out, the following disclosure requirements have been identified as material:

Disclosure	Description of the disclosure requirement	Chapter
requirement		
E1	Climate change	
ESRS 2 GOV-3	Integration of sustainability-related performance in incentive schemes	1.2.4
1	Transition plan for climate change mitigation	2.2.1
ESRS 2 SBM-3	Matarial impacts viels and appartunities and their interaction with strategy and business model	1.5, 2.3.1, 2.4.1, 2.5.1,
ESRS 2 IRO-1	Material impacts, risks and opportunities and their interaction with strategy and business model	2.6.1
	Description of the processes to identify and assess material impacts, risks and opportunities	
2 3	Policies related to climate change mitigation and adaptation	
4	Actions and resources in relation to climate change policies  Targets related to climate change mitigation and adaptation	
5		2.6.5
<u> </u>	Energy consumption and mix	
6	Gross Scopes 1, 2, 3 and Total GHG emissions	2.2.2, 2.3.5, 2.4.5, 2.5.5, 2.6.6
7	GHG removals and GHG mitigation projects financed through carbon credits	Not reported
8	Internal carbon pricing	Not reported
	Anticipated financial effects from material physical and transition risks and potential climate-related	<u> </u>
9		Not reported (phase-in)

# Entities for which a separate sustainability report is not required

The following entities are covered by the consolidated sustainability report and therefore make use of the exemption pursuant to Art. 19(a)(9) or Art. 29(a)(8) of Directive 2023/34/EU to forgo the preparation of a separate sustainability report:

- UNIQA Asigurari S.A. (Romania, Bucharest)
- UNIQA osiguranje d.d. (Croatia, Zagreb)
- UNIQA Towarzystwo Ubezpieczeń S.A. (Poland, Warsaw)

# 2. Climate change (ESRS E1)

### 2.1 DISCLOSURES ACCORDING TO EU TAXONOMY

EU Taxonomy disclosures are governed by Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment, supplemented by Commission Delegated Regulations (EU) 2021/2139, (EU) 2021/2178 and (EU) 2023/2486, as well as by Commission Notice (C/2024/6691) on the interpretation and implementation of certain legal provisions of the Disclosures Delegated Act under Article 8 of the EU Taxonomy Regulation on the reporting of Taxonomy-eligible and Taxonomy-aligned economic activities and assets (third European Commission Notice).

The EU Taxonomy disclosures from the previous financial year 2023 can be found in the templates of the 2023 Non-Financial Report.

UNIQA currently has no strategic objectives with respect to the material performance indicators of the EU taxonomy. However, elements such as climate-risk-based benefits for customers in accordance with the substantial contribution criteria will be taken into account in product development in the area of non-life insurance.

# 2.1.1 Premiums in non-life insurance and taxonomy-eligible activities

# 2.1.1.1 Discretionary judgements and interpretation requirements

In the financial year, we report taxonomy-aligned for the second time in a row. The third Notice of the European Commission, issued in November 2024, was taken into account. In the financial year, there is still no uniform understanding in market practice regarding the determination of taxonomy alignment, for example when calculating premium shares that relate to climate change adaptation allowances. This was done in the financial year, based on long-term loss histories resulting from recognised climate-related risks.

### 2.1.1.2 Reporting principles

Under the EU Taxonomy Regulation, insurance companies are required to disclose an indicator in relation to their non-life insurance business (economic activities 10.1 and 10.2 in accordance with the EU Taxonomy). European legislators have therefore defined certain business lines of non-life insurance that are considered environmentally sustainable in relation to the environmental objective of climate change adaptation. The business lines specified in the EU Taxonomy are:

- Medical expense insurance
- Occupational disability insurance
- Casualty insurance
- Motor TPL insurance
- Other motor insurance
- Marine, aviation and transport insurance
- Fire and other damage to property insurance
- Assistance

The business lines classified by UNIQA as taxonomyaligned are:

- Motor TPL insurance
- Other motor insurance
- Marine, aviation and transport insurance
- Fire and other damage to property insurance

In terms of non-life insurance, detailed research was conducted on taxonomy-eligible property and casualty insurance by using the templates set out in Annex X to the Delegated Regulation (2021/2178), with respect to all premium elements, based on the premiums written, separated by direct and indirect business and before and after any reinsurance. Underwriting specialists analysed the content of insured benefits and scope of cover to establish whether they were adapted to the impacts of climate change. As a result of the different cover being issued in places, retail and corporate business were analysed separately and classified in relation to the insurance activity's taxonomy eligibility and alignment. The share of taxonomy-eligible economic activities in the total charged non-life insurance premiums (before reinsurance) was also determined. The premiums were divided into premium shares in accordance with the provisions of the draft version of the third Notice of the European Commission, which relate to climate change adaptation coverage. Technical screening criteria (TSC), compliance with "minimum social safeguards" (MSS) and "do no significant harm" (DNSH) criteria laid down in the Delegated Regulation were also checked.

## 2.1.1.3 Limited data availability or documentation

The above-mentioned evidence could not be documented for retail business, standardised SME business, or incoming co-insurance and reinsurance, and therefore could not be included in the taxonomy-aligned premiums, because no climate risk-based benefits are currently provided for retail business, and because compliance with the minimum social safeguards could not be demonstrated for standardised SME business and the acquired corporate business.

As part of its corporate business in a customised contract form, and the share of premiums calculated there for insurance coverage for natural disasters that are also related to climate change, it was possible to demonstrate compliance with the "substantial contribution" criteria, "do no significant harm" criteria, and with the "minimum social safeguards" for the financial year.

To comply with the "do no significant harm" criteria, premiums from activities related to the extraction, storage, transportation, or manufacturing of fossil fuels, and premiums from insurance of vehicles, property, plant and equipment, or other installations used for these purposes were excluded from the taxonomy-eligible premiums.

"Substantial contribution criteria" were also verified for corporate business, but not for retail business. The criteria of "leadership in modelling and pricing climate risks", "product design", "innovative insurance coverage solutions", "transfer of data" and "high performance levels after a catastrophe" were appropriately substantiated for the corporate business. However, it was not possible to demonstrate that the criteria relating to product design for the retail business had been met.

Compared with the previous year, UNIQA provided evidence of compliance for the financial year with the minimum social safeguards (MSS) for corporate customers. A multi-stage, risk-based analysis of corporate customers with regard to the international standards and frameworks specified in Art. 18 of the EU Taxonomy Regulation did not identify any violations. Processes for ensuring compliance with the minimum protection criteria for human and labour rights, preventing corruption and bribery,

taxation and fair competition were also established for its own operations (including its relations with suppliers).

The percentage of the taxonomy-eligible premium for the previous year was recalculated due to changes and standardisation of methodology and adjusted to 6.1 per cent. In the financial year, the share of the taxonomy-eligible premium was 7.0 per cent, of which 5.9 per cent was taxonomy-eligible and not aligned, and 1.1 per cent was taxonomy-eligible and aligned (€51.2 million). In the previous year, the share of the taxonomy-eligible and aligned premium was 0 per cent, because the aforementioned evidence could not be provided. In the financial year, these were demonstrated for corporate business. Due to the complex contractual structures in the different types of reinsurance, it is not possible to show the exact reinsurance share of taxonomy-aligned premiums. If the reinsurance premium had been set in proportion to the gross premiums written using an approximation method, the reinsurance share would be 20.5 per cent (€10.5 million).

## Reporting template: The underwriting KPI for non-life insurance and reinsurance undertakings

	Substantial contribution to climate change adaptation		
	Absolute premiums, 2024	Proportion of premiums, 2024	Proportion of premiums, 2023
Economic activities	In € million	%	%
A.1. Non-life insurance and reinsurance underwriting Taxonomy-aligned activities (environmentally sustainable)	51.2	1.1	0.0
A.1.1 Of which reinsured	n/a	n/a	0.0
A.1.2 Of which stemming from reinsurance activity	0.0	0.0	0.0
A.1.2.1 Of which reinsured (retrocession)	0.0	0.0	0.0
A.2 Non-life insurance and reinsurance underwriting Taxonomy-eligible but not environmentally sustainable activities (not Taxonomy-aligned activities)	276.1	5.9	6.1
B. Non-life insurance and reinsurance underwriting Taxonomy-non-eligible activities	4,351.0	93.0	93.9
Total (A.1 + A.2 + B.)	4,678.3	100.0	100.0

### 2.1.2 Investments and taxonomy-eligible activities

# 2.1.2.1 Discretionary judgements and interpretation requirements

The Delegated Regulation (EU) 2021/2178 specifies that insurance companies must make disclosures in relation to investments. Any undertaking that falls under the obligation to report under Articles 19a and 29a of Directive 2013/34/EU are required to make disclosures under Article 8 of the EU Taxonomy Regulation. This scope is also applied for counterpositions of UNIQA's investments. The taxonomy classification is carried out with the support of the external data provider ISS STOXX.

UNIQA's metrics on taxonomy alignment and eligibility with respect to both revenue and operating expenses are based on data from financial and non-financial companies.

The published assessment criteria for the environmental targets of the climate change mitigation and climate change adaptation were taken into account when calculating taxonomy alignment. The assessment criteria for all six environmental targets (including additions to environmental targets for climate mitigation and climate change adaptation) were taken into account when calculating the taxonomy eligibility:

- · Climate change mitigation
- · Climate change adaptation
- Sustainable use and protection of water and marine resources
- Transition to a circular economy
- · Pollution prevention and control
- Protection and restoration of biodiversity and ecosystems

The final version of the Commission Notice on the interpretation and implementation of certain legal provisions of the Disclosures Delegated Act under Article 8 of the EU Taxonomy Regulation on the reporting of Taxonomy-eligible and Taxonomy-aligned economic activities and assets enacted in November 2024 was also taking into consideration when implementing the requirements.

DNSH (Do No Significant Harm)					
Climate change mitigation	Water and marine resources	Circular economy	Pollution	Biodiversity and ecosystems	Minimum safeguards
Y/N	Y/N	Y/N	Y/N	Y/N	Y/N
Υ	Υ	Υ	Υ	Υ	Υ
Υ	Υ	Υ	Υ	Υ	Υ
Υ	Υ	Υ	Υ	Υ	Υ
Υ	Υ	Υ	Υ	Υ	Υ

Coverage comprises the following assets (excluding assets of countries, central banks and supranational issuers):

- Property, plant and equipment
- Investments
- Unit-linked and index-linked investments
- Life insurance

The scope of coverage underlying the calculation in accordance with the templates contained in Annex X of the 2021/2178 Delegated Regulation is  $\[ \le \] 18,226.4$  million, representing 100 per cent of the coverage. Compared with the previous year, the financial year also includes third-party funds.

### 2.1.2.2 Reporting principles

The calculation of the companyrelated KPIs in accordance with Art. 8 of the EU Taxonomy Regulation refers to the investments of UNIQA Insurance Group AG published for the financial year in the consolidated Group report.

### Direct investments and internally managed funds

Data on internally managed non-listed funds is provided by the external data provider SOF and the asset manager Stepstone.

All other internally managed funds are evaluated at item level for taxonomy alignment based on data provided by ISS STOXX. The same approach is taken for direct investments. Where an internally managed fund contains a third-party fund, the third-party fund is evaluated as follows.

### Third-party funds

In line with the third announcement by the EU Commission, investments in third-party funds are evaluated on the basis of Art. 6, 8, and 9 of Regulation (EU) 2019/2088 on sustainability related disclosures in the financial services sector (Disclosure Regulation). Investments in third-party funds – as referred to in the aforementioned articles of the Disclosure Regulation – fall under the scope of the calculation of UNIQA's taxonomy alignment metric. Taxonomy-alignment data for third-party funds is obtained from Morningstar. The percentage of the total fund volume that is taxonomy-alignment. UNIQA does not examine the taxonomy-alignment of the companies within the third-party funds at the individual position level.

### Land and buildings

Compliance with the "substantial contribution criteria" and the "do no significant harm criteria" was demonstrated for investment property (economic activities 7.1 New construction and 7.7 Acquisition and ownership of buildings in accordance with the EU taxonomy). For this purpose, a climate risk analysis was carried out for properties with an energy performance certificate of energy efficiency class C or better. The analysis concerned roughly 74.4 per cent of investment properties with a combined fair value of approximately €3.0 billion. (For more information see chapter on Climate change in the area of real estate and business ecology. For a new building, the relevant assessment criteria for constructing new buildings were provided. UNIQA's Green Investment Ratio (GIR) is primarily derived from the properties held and leased as investments. Due to the rental income, the revenue-based GIR is significantly higher than the CapEx-based GIR.

### 2.1.2.3 Limited data availability or documentation

As an exception to the carrying amounts and various IFRS measurement methods applied when preparing the consolidated financial statements, the taxonomy metrics were calculated across the board on the basis of fair values.

The resulting differences to the carrying amounts reported in the consolidated financial statements are mainly from the investment properties partially measured at acquisition costs in the Consolidated Statement of Financial Position and from the associated interests accounted for using the equity method.

# 2.1.2.4 Additional disclosures pursuant to Annex X of the EU Taxonomy Regulation – KPI pursuant to Art. 8

All government bonds and bonds from supranational emitters were eliminated from the calculation in accordance with the Delegated Acts to the EU Taxonomy Regulation.

The share of exposure to central governments, central banks and supranational emitters amounts to 32 per cent with regard to all investments.

### 2.1.2.5 Additional disclosures related to Annex XII EU Taxonomy Regulation

The following additional disclosures are published on the basis of Delegated Regulation (EU) 2022/1214 amending Commission Delegated Regulation (EU) 2021/2139 as regards economic activities in certain energy casting sectors and Commission Delegated Regulation (EU) 2021/2178 as regards specific public notices for these economic activities:

Article 1 lists the amendments to Delegated Regulation (EU) 2021/2139 and Article 2 the amendments to Delegated regulation (EU) 2021/2178.

Investments in companies with relevant engagement that fall under the scope of the economic activities below are to be reported in the corresponding templates 1-5 provided in Annex XII.

UNIQA publishes the templates for nuclear energy and fossil gases in accordance with Regulation 2022/1214 Annex XII. In so doing, UNIQA has no dedicated financing in the aforementioned areas and does not make targeted investments in companies in the aforementioned activities. The exposure arises from the counterparties' disclosure of the templates.

Based on the financial year's key performance indicators (KPI), the share of taxonomy-aligned activities in the nuclear energy and fossil gases sectors has increased to 0.25 per cent (2023: 0.01 percent) (Template 2 – denominator perspective). Based on operating expenses, the share rose to 0.24 per cent in the financial year (2023: 0.01 per cent).

This increase is largely due to the fact that financial companies published compliance data last year for the first time, which UNIQA was able to take into account for the first time this year.

#### 2.1.2.6 Comparison with previous year

In 2023, the weighted average value of all investments geared towards or associated with the financing of taxonomyaligned economic activities (based on the environmental objectives of climate change mitigation and climate change adaptation) relative to the value of total assets recognised for the purpose of calculating the KPI came to 10.88 per cent on a revenue basis, which corresponds to an absolute value of €1,855.8 million. The corresponding figure for the financial year was 13.00 per cent (€2,369.0 million). In terms of CapEx, the figure for 2023 was 0.77 per cent (€131.4 million) compared with 1.07per cent (€195.4 million) in the financial year. This positive development is partly due to the fact that financial companies published compliance data last year for the first time, which UNIQA was able to take into account for the first time this year. In addition, the proportion of taxonomy-aligned properties has increased, which has also had a positive impact on GIR.

The taxonomy-aligned activities consist of 93 per cent from the real estate and housing sector (2023: 95 per cent), 3 per cent from the construction sector (2023: 2 per cent), 2 per cent from the energy supply (2023: 3 per cent), and 2 per cent from the remaining sectors (2023: 0 per cent).

## Reporting template: The proportion of the insurance or reinsurance undertaking's investments that are directed at funding, or are associated with, Taxonomy-aligned in relation to total investments

	%	
The weighted average value of all the investments of insurance or reinsurance undertakings that are directed at funding, or are associated with Taxonomy-aligned economic activities relative to the value of total assets covered by the KPI, with following weights for investments in undertakings per below:

Turnover-based:	0.19	
CapEx-based:	0.22	
The proportion of the insurance or reinsurance undertaking's investments other than investments held in respect of life insurance contracts where the investment risk is borne by the policy holders, that are directed at funding, or are associated with, Taxonomy-aligned:		
Turnover-based:	12.97	
CapEx-based:	1.04	
The proportion of Taxonomy-aligned exposures to other counterparties and assets over total assets covered by the KPI****:		
Turnover-based:	0.00	
CapEx-based:	0.00	

\*\*\*\* In the absence of further details from the Commission, other counterparties are declared as entities which cannot or cannot clearly be classified as reporting for the purposes of non-financial reporting. Due to the EU Taxonomy Regulation, only entities subject to reporting requirements are included for the auditing of taxonomy-aligned economic activities. As such, the above reasoning results in zero taxonomy-aligned exposures.

	%
Breakdown of the KPI numerator by environmental objective	
Taxonomy-aligned activities – if the do no significant harm (DNSH) and social safeguards are assessed po	ositively:
(1) Climate change mitigation*	
Turnover	12.98
СарЕх	1.04
(2) Climate change adaptation*	
Turnover	0.02
СарЕх	0.03
(3) Sustainable use and protection of water and marine resources	
Turnover	n/a
СарЕх	n/a
(4) Transition to a circular economy	
Turnover	n/a

#### Reporting template 1 Nuclear energy and fossil gas related activities

Row	Nuclear energy related activities	
1.	The undertaking carries out, funds or has exposures to research, development, demonstration and deployment of innovative electricity generation facilities that produce energy from nuclear processes with minimal waste from the fuel cycle.	Yes
2.	The undertaking carries out, funds or has exposures to construction and safe operation of new nuclear installations to produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production, as well as their safety upgrades, using best available technologies.	Yes
3.	The undertaking carries out, funds or has exposures to safe operation of existing nuclear installations that produce electricity or process heat, including for the purposes of district heating or industrial processes such as hydrogen production from nuclear energy, as well as their safety upgrades.	Yes
Row	Fossil gas related activities	
4.	The undertaking carries out, funds or has exposures to construction or operation of electricity generation facilities that produce electricity using fossil gaseous fuels.	Yes
5.	The undertaking carries out, funds or has exposures to construction, refurbishment, and operation of combined heat/cool and power generation facilities using fossil gaseous fuels.	Yes
6.	The undertaking carries out, funds or has exposures to construction, refurbishment and operation of heat generation facilities that produce heat/cool using fossil gaseous fuels.	Yes

#### Reporting template 2 Taxonomy-aligned economic activities (denominator)

Row	Economic activities
1.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.26 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
2.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.27 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
3.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.28 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
4.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.29 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
5.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.30 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
6.	Amount and proportion of taxonomy-aligned economic activity referred to in Section 4.31 of Annexes I and II to Delegated Regulation (EU) 2021/2139 in the denominator of the applicable KPI
7.	Amount and proportion of other taxonomy-aligned economic activities not referred to in rows 1 to 6 in the denominator of the applicable KPI
8.	Total applicable KPI

#### 2.2 CLIMATE CHANGE (E1)

## 2.2.1 Transition plan for climate change mitigation (E1-1)

#### 2.2.1.1 UNIQA on the journey to climate transition

In light of the need to rapidly implement targeted, streamlined actions to address climate transition and reduce  $\rm CO_2$  emissions, the climate strategy represents the centrepiece of the UNIQA sustainability strategy. As an insurance company, UNIQA assumes responsibility for both direct and indirect emissions resulting from financing, investments and property insurance policies. The aim is to limit global warming to a maximum of 1.5°C, as agreed in the 2015 Paris Agreement.

UNIQA recognises that the transition to a net-zero economy requires time, commitment and innovation. For this reason, UNIQA is committed to regularly reviewing progress and to working on plans and measures to reach the goal of achieving net-zero emissions in the insurance business and in its own operations by 2040 in Austria and by 2050 Group-wide across all business segments (investment, insurance, own operations).

Net-zero emissions are defined as the reduction of GHG emissions from operations (Scopes 1, 2 and 3) to zero at best or to a residual level that is compatible with achieving net-zero emissions at global or sectoral level in corresponding scenarios or sector paths within the framework of the 1.5 C target; and as the neutralisation of all residual emissions by the net-zero target year and all GHG emissions subsequently released into the atmosphere. At the moment, UNIQA's net-zero target does not meet ESRS definitions, because no target has yet been set for emissions reductions in 2040 or 2050, only interim targets. At present, there is no sector-specific net-zero definition for financial undertakings, but UNIQA plans to follow developments on this topic.

In order to achieve the stated goal, UNIQA has developed decarbonisation measures, strategies, standards and guidelines specific to the core business and developed a Group-wide transition plan. The adoption of the UNIQA decarbonisation policy in 2019 was the first major step towards the climate transition. The policy entailed the phase-out of coal in both the investment and insurance business, and led to the development of a comprehensive sustainability strategy. This strategy was rolled out at the

end of 2020 and reinforced in 2021 by the accession of UNIQA to the Net-Zero Asset Owner Alliance (NZAOA) and the Austrian Green Finance Alliance (GFA). In addition, the interim climate targets were validated by the Science Based Targets Initiative (SBTi) in 2023. Group-wide interim climate targets for four areas of the investment portfolio were validated along with the Group's own operations. This represents a significant step for UNIQA towards optimising the alignment of the portfolio and the GHG emissions of the Group's own operations with a 1.5°C climate target pathway.

"UNIQA on the Journey to Climate Transition" marks one of the first steps towards a transition plan and outlines the approach and future actions for achieving a comprehensive climate transition. As sustainability is a core aspect of the new strategy programme, UNIQA 3.0 - Growing Impact, which enters into force in 2025, and owing to the fact that the UNIQA sustainability strategy pursues a holistic approach that unites economic ambition with a clear commitment to the environment and society, corresponding targets and actions have also been defined. Specific to the core business, the targets and actions of these strategies are aligned with established international and national frameworks and, like the transition plan, are continually reviewed and refined. Integration of these targets and actions into financial planning is currently in progress. "UNIQA on the Journey to Climate Transition" was developed in consultation with the various company divisions, adopted by the Management Board in October 2024 and published in December 2024. As part of the new strategy programme, UNIQA aims to define specific action plans by 2028 for achieving the set interim targets and thereby complete the transition plan. Current progress on the topic of climate transition is presented in the sub-sections on ESRS E1 "Climate change".

Although the neutralisation of residual emissions will be necessary in the future to achieve net-zero emissions, at present UNIQA is focusing on reducing and mitigating GHG emissions with respect to all actions and targets. Accordingly, the primary focus is on avoiding the consumption of (fossil fuel) energy and the associated emissions from greenhouse gases to the greatest possible extent as well as reducing the fossil fuel share and replacing energy sources with sustainable alternatives. Comprehensive decarbonisation plans and strategies are already in place in this regard. As a result, no compensation measures are being introduced for the time being. UNIQA does not currently use an internal carbon price.

As a company focused on insurance, UNIQA does not invest directly in assets related to the production or processing of coal, crude oil or natural gas. Long-term investments in these sectors are therefore not reported. Investments in investment products from companies that operate in the coal, oil or natural gas sectors and insurance coverage for corresponding companies are indirectly linked to the production or processing of fossil fuels. According to the decarbonisation strategy, an exit plan has been established in relation to fossil fuels, which is described in the sub-section on climate matters under Investments. UNIQA is not exempt from the EU benchmark values set forth in the Paris Agreement in accordance with the EU Benchmark Regulation.

#### 2.2.1.2 Investment transition plan

UNIQA's investment strategy follows the principles of sustainability, the Paris Agreement and the overarching goal of achieving net-zero emissions across the Group by 2050. An analysis of the portfolio based on  $\rm CO_2\,emissions$  is used to identify climate risks and opportunities at an early stage and to assess the willingness of emitters to embrace the transformation in line with the 1.5°C target. Sustainable investments contribute to financing the transformation, reducing our exposure to ESG risks and increasing sustainability-related opportunities.

The weighted average carbon intensity (WACI) trajectory entails a 60 per cent reduction by 2030 compared to the 2021 base year, in line with recommendations from the Intergovernmental Panel on Climate Change (IPCC). UNIQA's validated SBTi targets confirm efforts to limit global warming to 1.5°C.

Several decarbonisation levers for reaching net zero have been identified:

- Decarbonisation strategy: Phase-out of fossil fuels and nuclear energy by 2035. New investments in coal, oil, and natural gas will be gradually curtailed and eventually discontinued altogether.
- Reducing emissions intensity: Managing portfolio efficiency gradually reduces the emissions intensity of investments.
- Promoting SBTi targets: UNIQA helps emitters set their own science-based climate targets.

Emitters that contribute to reducing emissions or social projects are financed through sustainable investments.

These investments are broken down into the following cat-

egories: green, social and sustainability bonds, SFDR Article 9 funds, and sustainable infrastructure projects and technologies. Engagement activities are designed to promote decarbonisation efforts among companies and prevent divestments wherever possible.

To minimise the risk of residual emissions from individual companies in which UNIQA invests by 2050, the emissions in question should ideally be neutralised by the companies themselves. The net-zero by 2050 investment target requires any remaining emissions to be offset through carbon credits. In order to reduce the financial risk, work is underway on a gradual phase-out of investments in fossil fuels and nuclear energy. Targeted engagement activities have also been undertaken with the companies since 2022. The focus is on companies that together account for 65 per cent of UNIQA's financed emissions. In addition to the engagement activities, a limit system has been established for direct investments in GHG-intensive emitters. Investments are only permitted if at least one of the following criteria is met:

- The investment takes the form of a green, social or sustainability bond.
- The emitter has committed to a plan to reduce GHG emissions.
- The emitter has obtained an above-average ESG status from ISS.
- The investment has been approved by the Asset Liability Management Committee.

At this point in time, UNIQA has not yet developed specific targets or plans for the development of taxonomy-eligible and taxonomy-aligned revenues, CapEx or OpEx. Further developments on this topic will be monitored on an ongoing basis and taken into account as necessary in future strategy adjustments.

The transition plan with regard to investments is set out in the UNIQA Group Responsible Investment Standard approved by the Management Board. Progress on the implementation of the transition plan for investment and the actions taken are described in detail in the sub-sections on climate issues under Investments.

#### 2.2.1.3 Transition plan in corporate business

UNIQA's investment strategy in the corporate business follows the principles of climate change mitigation, the Paris Agreement and the overarching goal of achieving net-zero emissions in Austria by 2040 and across the Group by 2050. The main strategic goals include reducing GHG emissions, strengthening customer resilience to climate-related risks and producing sustainable product solutions. A comprehensive sustainability risk assessment is used to uncover climate-relevant risks and opportunities and foster customer willingness to transform their businesses in order to limit global warning to the 1.5°C target.

UNIQA has identified several decarbonisation levers for reaching net zero in the corporate business:

- Fossil fuel phase-out: UNIQA is pursuing a gradual exit strategy from fossil fuel transactions. As of 2024, no new contracts will be concluded with companies active in the crude oil sector, and as of 2025 this will also apply to companies in the natural gas sector. Exceptions are granted for companies that pursue science-based climate targets in line with the Paris Agreement.
- Expansion of the renewable energy business: UNIQA actively supports the expansion of renewable energy and offers dedicated insurance solutions for companies in the wind, solar and hydropower sector. The aim behind this is to contribute to the transition to zero-carbon energy and increase customer resilience.
- Engagement with carbon-intensive customers: In the financial year, UNIQA conducted an analysis of the top ten emitters in each market to subsequently initiate targeted measures to reduce emissions. This approach to reducing emissions requires closer engagement with customers in carbon-intensive sectors to help them in their climate transformation and ensure that they remain on track to the 1.5°C limit pathway.

In order to meet growing market demand, the development of innovative sustainability products is encouraged in the corporate business.

As part of the decarbonisation strategy, interim targets were set in order to reduce insurance-associated Scope 3

emissions by 2040 for Austria and by 2050 for the other countries in which UNIQA operates. These five-year interim targets support the implementation of the climate strategy. Due to a lack of methodological guidelines and standards, it is currently not possible to assess the climate targets in the corporate business in terms of alignment with the 1.5°C limit pathway.

The transition plan is integrated into the UNIQA Group ESG Underwriting Standard and was approved by the Management Board. Responsibility for compliance and implementation of the transition plan rests with the management functions responsible for the Corporate Business & Affinity business segment at both UNIQA Austria and UNIQA International.

Any need to adapt the strategy is monitored on an ongoing basis and integrated into future implementation measures, as necessary. Progress on the implementation of the transition plan and the actions taken are reviewed on an ongoing basis and described in detail in the sub-sections on climate issues under corporate business.

#### 2.2.1.4 Transition plan in the retail business

Climate change adaptation and mitigation are two of the key elements of UNIQA's sustainability strategy for the retail business (ESG Retail Strategy). The aim in this regard is to address risks and opportunities arising from the Group-wide climate transition with sustainably designed retail products, and to achieve net-zero emissions in the insurance business by 2040 in Austria and by 2050 across the Group. In addition to climate change adaptation, energy and  $CO_2$  emissions also play an important role.

CO<sub>2</sub> emissions caused by customers were identified as decarbonisation levers. Decarbonisation in the retail business is being driven, among other things, by incentivising sustainable mobility. This includes, for example, e-coverage, namely insurance coverage developed especially for electric vehicles, and the carbon pricing model for the new motor vehicle sales product. Launched in Austria, this product offers price reductions for low-consumption vehicles. The establishment of framework conditions for sustainable product development marks an important step in the transition of the retail business toward net-zero emissions. Climate change adaptation, promoting renewable energy and reducing emissions as well as focusing on diversity and inclusion are enshrined in the product development process in Austria through an additional internal guideline. ESG features will be integrated into future products to promote preventive measures by customers and increase their resilience against climate-related damage and extreme weather events. An ESG retail strategy is currently being developed for other countries in which UNIQA operates.

Within all those aspects, UNIQA attaches great importance to continually raising awareness of sustainability among its sales employees. Targeted training courses and awareness programmes in sales give sales employees access to information to ensure they are optimally prepared for consultations. In addition, the enhanced consulting approach is also designed to ensure customers are always offered suitable sustainable products. UNIQA relies on extensive market research to support this, in order to respond to market changes, identify trends early on and optimally meet the sustainability demands of customers.

In this context, UNIQA is working on establishing a quantitative assessment and target setting for the pillars of the sustainability strategy in the retail business. The first step involves creating a database that will serve as a basis for future target setting.

Various measures related to the defined decarbonisation levers are already being implemented across the Group. Please consult the chapter "Climate matters in the retail business" for more information.

Progress on the implementation of the transition plan in the retail business and the actions taken are reviewed on an ongoing basis and described in detail in the sub-sections on climate issues under Retail business.

### 2.2.1.5 Transition plan for UNIQA's real estate and vehicle fleet

The goal in this regard is to achieve net-zero emissions for owner-occupied properties held by UNIQA, for investment properties and for the vehicle fleet in Austria by 2040 and in the other countries in which UNIQA operates by 2050. The Paris Agreement and the 1.5°C limit pathway based thereon form the basis for the sustainable management of the real estate portfolio. As part of the Science Based Targets Initiative (SBTi), UNIQA has therefore committed to an interim target that has been successfully validated. This reduction pathway aligns with the 1.5°C global warming limit target.

UNIQA's primary decarbonisation levers in relation to owner-occupied properties and investment properties are its use of renewable energy, transitioning to sustainable heating systems such as heat pumps, district heating or biomass heating, expanding the use of certified green electricity and increasing energy efficiency. Electrification of the vehicle fleet constitutes another lever in terms of operational ecology.

The real estate portfolio consists of various asset classes within the real estate sector and ranges from traditional Viennese apartment blocks to premium office properties. The types of heating systems used in these buildings also vary. The relevant share of sustainable heating systems such as district heating and heat pumps is to be continuously increased, while the share of oil and gas heating is to be reduced. Properties with individual gas boilers in the individual residential units in the 2023 financial year account for around 39 per cent on the basis of fair values. A consistent reduction in this share would be desirable. However, this is difficult to implement in Austria; the consent of tenants is required by law to replace individual gas boilers.

Progress on the implementation of the transition plan properties and vehicles as well as the measures taken are described in detail in the sub-sections on climate issues for properties and operational ecology.

## 2.2.2 Gross Scopes 1, 2, 3 and Total GHG emissions (E1-6)

The following table provides an overview of the GHG emissions directly or indirectly attributable to UNIQA's economic activities. It covers emissions from various sources and activities within the company. The emissions are broken down into Scope 1, Scope 2 and Scope 3 categories and are based on specific sources and calculation methodologies.

Scope 1 and 2 emissions: Includes emissions from owner-occupied and downstream leased properties and the vehicle fleet. Scope 2 emissions are reported using a market-based and location-based method. UNIQA is not covered by regulated emissions trading schemes. An SBTi-validated interim climate target has been set for Scope 1 and Scope 2 emissions from owner-occupied properties and the vehicle fleet. It calls for a 42 per cent reduction in emissions by 2030 compared with 2021.

Scope 3 emissions: Includes financed emissions from investments in corporations and government bonds (Category 15) in accordance with Part A of the PCAF Standard. UNIQA has not defined any interim targets for financed emissions. However, comprehensive targets including SBTi-validated targets for investments are presented in the Investment sub-section on climate issues. Other Scope 3 categories according to the GHG protocol were analysed and classified as not material on the basis of their extent. UNIQA continually monitors the materiality of additional Scope 3 categories. In addition to the emissions in Scope 3.15, UNIQA also reports on insurance-associated emissions from the corporate business and vehicle-related emissions for the retail business in accordance with Part C of the PCAF Standard. These emissions are not presented in the table but instead reported in the sub-sections on climate issues concerning Corporate business and Retail business.

The pro rata emissions arising from UNIQA's holding in STRABAG SE accounted for in accordance with the equity method are reported within the scope of the financed emissions (Scope 3.15) and within the corresponding targets.

The share of Scope 3 GHG emissions calculated on the basis of primary data is 44 per cent.

Biogenic  $CO_2$  emissions from the combustion or biological degradation of biomass not included in Scope 1 GHG emissions are as follows: 110 tonnes of  $CO_2$ . Those not included in Scope 2 GHG emissions (market-based) are as follows: 17,725 tonnes of  $CO_2$ ; those not included in Scope 2 GHG emissions (location-based) are as follows: 17,725 tonnes of  $CO_2$ ; and those not included in Scope 3 GHG emissions are as follows: 0 tonnes of  $CO_2$ . Owing to the limited availability of data, reported Scope 2 GHG emissions of biogenic  $CO_2$  accounted for using the location-based method are the same as the emissions accounted for using the market-based method.

The detailed calculation methodologies and assumptions, scope and specific sources of emission factors are discussed in the relevant sub-sections.

	Retrospective			Miles	stones and ta	ones and target years	
	Base year	2024	2025	2030		nnual % of arget/base year	
Scope 1 GHG emissions							
Gross Scope 1 GHG emissions (t CO <sub>2</sub> e)	n/a <sup>2)</sup>	21,435	n/a	-42 % <sup>1)</sup>	n/a	-13 % <sup>1)</sup>	
Percentage of Scope 1 GHG emissions from regulated emission trading schemes (%)	n/a	0%	n/a	n/a	n/a	n/a	
Scope 2 GHG emissions							
Gross location-based Scope 2 GHG emissions (t CO <sub>2</sub> e)	n/a <sup>2)</sup>	33,236	n/a	n/a	n/a	n/a	
Gross market-based Scope 2 GHG emissions (t CO <sub>2</sub> e)	n/a <sup>2)</sup>	19,581	n/a	-42 % <sup>1)</sup>	n/a	-13 % <sup>1)</sup>	
Scope 3 GHG emissions							
Total gross indirect (Scope 3) GHG emissions (t CO <sub>2</sub> e)	n/a	6,444,779	n/a	n/a	n/a	n/a	
1 Purchased goods and services					ificant Scope		
2 Capital goods					ificant Scope		
3 Fuel and energy-related activities (not included in Scope 1 or Scope 2)					ificant Scope		
4 Upstream transportation and distribution			Not a significant Scope 3 categ				
5 Waste generated in operations			Not a significant Scope 3 cated				
6 Business travel					ificant Scope		
7 Employee commuting					ificant Scope		
8 Upstream leased assets					ificant Scope		
9 Downstream transportation					ificant Scope		
10 Processing of sold products					ificant Scope		
11 Use of sold products					ificant Scope		
12 End-of-life treatment of sold products					ificant Scope	- ,	
13 Downstream leased assets					ificant Scope		
14 Franchises				Not a sign	ificant Scope	3 category	
15 Investments	n/a	6,444,779	n/a	n/a	n/a	n/a	
Total GHG emissions							
Total GHG emissions (location-based) (t CO <sub>2</sub> e)	n/a	6,499,450	n/a	n/a	n/a	n/a	
Total GHG emissions (market-based) (t CO <sub>2</sub> e)	n/a	6,485,795	n/a	n/a	n/a	n/a	

1) The UNIQA science-based target does not differentiate between Scope 1 and Scope 2 emissions and is limited to emissions from owner-occupied properties and the vehicle fleet.

The UNIQA science-based target is limited to owner-occupied properties and the vehicle fleet. The table also includes emissions from investment property. Therefore, the base value and the target achievement are indicated in the chapter on Climate change in relation to real estate and operational ecology.

The premiums written were used as a benchmark for the net revenue when calculating the GHG intensity for net revenue. The premiums written are specified in the Performance section of the "UNIQA Group KPIs" table in the "Business Performance within the Group" section.

GHG intensity per net revenue (premiums written)	2024
Total GHG emissions (location-based) per net revenue	
(t CO₂e/€ million revenue)	829
Total GHG emissions (market-based) per net revenue	
(t CO₂e/€ million revenue)	827

#### 2.3 INVESTMENTS

## 2.3.1 Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3)

UNIQA has identified several material impacts and risks associated with investments with regard to climate change adaptation, mitigation and energy consumption. Material negative impacts arise from UNIOA failing to sufficiently leverage its position as a provider of capital to support the achievement of sustainability targets and the implementation of sustainable strategies. This may result in companies having little incentive to take effective action with regard to climate change adaptation, GHG emissions and energy consumption. The transition to a more sustainable economy could also reduce investor willingness to invest in certain companies, potentially undermining their corporate value. UNIQA's assets, liabilities, financial position and profit or loss could be adversely affected as a result, with the worst-case scenario potentially leading to stranded assets. Companies that operate in carbon-intensive and energy-intensive sectors are most likely to be affected by these negative impacts. Likewise, companies with business models closely intertwined with the production or processing of fossil fuels face significant challenges. UNIQA addresses these climate-related transition risks with a number of different policies and actions designed to both significantly reduce the impacts of GHG emissions and minimise the financial risk for UNIQA. The company has therefore adopted a proactive and sustainable approach to addressing both environmental and economic challenges.

## 2.3.2 Policies related to climate change mitigation and adaptation (E1-2)

The UNIQA Group Responsible Investment Guideline governs the requirements applicable to sustainable investments. Ultimate responsibility for implementing the strategies described below lies with the Head of Asset Management.

## Decarbonisation strategy and nuclear energy with regard to investments

According to the decarbonisation strategy, UNIQA aims to phase out coal and crude oil by 2030 at the latest, and natural gas and nuclear energy by 2035 at the latest, and to continually reduce the weighted average carbon emission intensity (WACI) of investments. The WACI decarbonisation target adheres to the NZAOA mitigation path recommendations based on the assessment of the 1.5°C no/limited overshoot scenario set forth by the Intergovernmental Panel on Climate Change (IPCC) and accordingly also aligns with the Paris Agreement. By adopting this strategy, UNIQA aims to significantly reduce emissions intensity and exposure to fossil fuels and nuclear energy. The regulated phase-out of fossil fuels will reduce the risk of stranded assets and thereby help to preserve the value of investments.

The decarbonisation strategy comprises the following milestones:

#### Coal

- Roll out of coal exclusion criteria since 2019
- Since April 2022, no investments have been made in funds including companies that generate more than 10 per cent of their revenue from thermal coal transactions
- Since 2024, no direct investments have been made in thermal coal producers or energy suppliers that produce electricity from coal if they generate more than 5 per cent of their revenue from coal

#### Oil

- No new direct investments in the expansion of projects from 2025 onwards
- As of 2025, no new direct investments will be made in oil producers or companies that produce heat from oil if they generate more than 30 per cent of their revenue from oil
- Termination of existing direct investments in oil producers or enterprises that produce heat from oil that generate more than 5 per cent of their revenue from oil by 2030
- Exceptions are granted for companies with SBTi certified targets in place

#### Natural gas

- No new direct investments in the expansion of projects from 2026 onwards
- No new direct investments in companies that generate more than 30 per cent of their revenue from the natural gas sector as of 2026
- Termination of existing direct investments in companies that generate more than 5 per cent of their revenue from the coal business by 2035
- Exceptions have been granted for companies with SBTi certified targets in place and companies that conduct EU Taxonomy-aligned activities (revenue, CapEx, OpEx)

#### **Nuclear energy**

- No new direct investments in the expansion of nuclear infrastructure projects from 2025 onwards
- Termination of existing direct investments in companies that generate more than 5 per cent of their revenue from nuclear energy by 2035
- Exceptions have been granted for companies with SBTi certified targets in place and companies that conduct EU Taxonomy-aligned activities (revenue, CapEx, OpEx)

#### **Engagement strategy**

As stipulated in the UNIQA Group Responsible Investment Guideline, the engagement strategy at UNIQA incorporates both proactive and reactive engagement.

Proactive engagement involves direct bilateral engagement with individual investee companies. Bilateral discussions are held with ESG managers at the respective companies to achieve progress on their specific targets.

The aim behind bilateral engagement is to support and assist these companies in significantly reducing their emissions, exercising more sustainable business practices and increasing their transparency through disclosures. This strategy is based on the conviction that targeted measures will have the greatest positive impact on UNIQA's climate targets among companies with the highest GHG emissions.

As part of this engagement, the company is focusing on the following areas to promote climate change mitigation:

- Implementation of a governance framework that defines climate risk responsibilities and supervisory duties
- Taking action to reduce GHG emissions across the entire value chain in line with the climate target of 1.5 degrees

- Celsius and to set SBTi-validated targets, if not already in place
- Transparent disclosures to demonstrate the resilience of the corporate strategy in various climate scenarios.

Reactive engagement refers to the collaborative engagement that UNIQA pursues as part of its membership in the Climate Action 100+ (CA 100+) investor initiative. As part of the initiative, a group of international investors reach out to the world's 170 largest corporate greenhouse gas emitters to align their climate strategy and reporting with science-based climate targets.

ISS enables investors to engage with companies that commit serious and structural violations of normative criteria in the fields of corporate governance, human and labour rights, the environment, or bribery and corruption, or fail to take measures to adequately respond to these violations and to take countermeasures with engagement based on standards. Corresponding violations include, in particular, violations of the principles of the UN Global Compact (UNGC) and of the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises.

#### Strategy for sustainable investments

UNIQA finances companies that make a contribution to reducing emissions or to social projects. The sustainability classifications of green, social and sustainability bonds according to International Capital Market Association (ICMA) principles are applied in this regard. Funds classified as Article 9 dark green funds under the EU Sustainable Finance Disclosure Regulation (SFDR) are also included in the list of sustainable investments. Article 9 dark green funds constitute investments that pursue a sustainability objective as defined by SFDR. Investments are also made in infrastructure projects that positively contribute to at least one Sustainable Development Goal (SDG) without adversely affecting other goals. The Sustainable Investment Strategy is set out in the UNIQA Group Responsible Investment Standard. Investments made are reviewed by the Risk Management team on a regular basis. Sustainable investments contribute to climate change adaptation, in particular by supporting infrastructure projects in the renewable energy segment. Sustainable investments are not assessed based on their emissions, but rather according to their transformation potential.

#### Monitoring processes

The Group Responsible Investment Steering Committee reviews the Group Responsible Investment Standard at least once a year. Chaired by the Head of Asset Management, the Committee is made up of the heads of Group Asset Management, representatives from the Asset Management and Portfolio Management ESG teams and representatives from the Group ESG Office. The committee is informed about the status of ESG activities in annual reports. Information on recent development and progress is also shared at in-house meetings with the Head of Asset Management. The Asset Management ESG team maintains an ongoing dialogue with the Group ESG Office, which coordinates the overarching sustainability strategy.

## 2.3.3 Actions and resources in relation to climate change policies (E1-3)

Targeted decarbonisation, commitments, risk assessments and sustainable investments help to promote a climate-friendly transformation and strengthen the portfolio's ESG performance. The following section explores the specific measures taken by UNIQA to actively contribute to reducing emissions in relation to investments.

#### Decarbonisation

In the reporting period, ISS enhanced its range of data with regard to various activities related to fossil fuels. As a result, more detailed information can be provided on production, processing, electricity generation, heat generation and exploration activities from 2025 onwards.

Current direct investment volumes in the following activities in the coal and oil sector that exceed the respective revenue thresholds are summarised in the list below:

- €8.1 million in companies that generate >5 per cent of their revenue from activities in the coal sector (production, processing, electricity generation)
- €0 in companies that generate >5 per cent of their revenue from heat generation in the coal sector
- €80.4 million in companies that generate >30 per cent of their revenue from activities in the oil sector (production, processing, electricity generation)
- €0 in companies that generate >30 per cent of their revenue from heat generation in the oil sector
- €0 in companies that generate >30 per cent of their revenue from exploration for all fossil energy sources (coal, oil, natural gas)

By contrast, the following limits were applied for direct investments in the following activities in the coal sector that exceed the respective revenue thresholds for the financial year:

- €0 in companies that generate >5 per cent of their revenue from activities in the coal sector (only production)
- €0 in companies that generate >5 per cent of their revenue from electricity generation in the coal sector

#### **Engagement activities**

As part of this commitment, decarbonisation efforts are promoted through an active dialogue maintained with the companies. Aspirations to work together with companies complement efforts to manage impacts on climate change mitigation, climate change adaptation and energy efficiency.

All bilateral engagement to date has been positive, not resulting in the need for any escalation measures in line with the engagement strategy due to a lack of willingness to cooperate on the part of the companies.

In line with the proactive bilateral engagement strategy, UNIQA reached out to two companies selected on the basis of their high share of UNIQA's financed emissions to obtain an initial overview of climate-relevant targets, measures and strategies pursued by engagement partners in the financial year. Together, these two companies represent 39 per cent of UNIQA's financed emissions. Bilateral engagements involve processes that span one to three years. In the first few years, the focus was on the commitment to setting climate targets.

As a member of CA 100+, UNIQA participated in a collaborative engagement with an energy producer in the financial year under view. With a focus on improving the affected company's decarbonisation measures, the engagement will continue into the following year.

Together with ISS, UNIQA was involved in ten standards-based engagements in the financial year. The engagements in question involved eight incidents of social violations and two incidents of environmental violations. In eight out of ten cases, actions or commitments have already been taken by the companies concerned to remedy the violation.

As a member of the Net-Zero Asset Owner Alliance, UNIQA took part in collaborative engagements with three of the world's largest asset managers, with a focus on climate-specific topics in the financial year.

#### Planned decarbonisation strategy actions

SBTi targets: In the pursuit of achieving SBTi targets, UNIQA plans to invest in companies validated by the SBTi and engage with companies in its portfolio to encourage them to establish their own SBTi targets. Continuation of the fossil fuel phase-out strategy and the limiting companies with high emissions will further help to achieve the targets.

<u>Portfolio decarbonisation:</u> Further aligning the portfolio with the commitments arising from UNIQA's memberships will ensure that the ESG quality of the Group's investments improves on a continuous basis. Decarbonisation and engagement measures are to be continued in the subsequent years in line with the SBTi. In accord with the decarbonisation strategy, emissions remain the main focus of the sustainability analysis.

Measures stated in the decarbonisation strategy include both direct and indirect investments in companies that operate in the coal, oil, natural gas and nuclear energy sectors.

- **Direct business investments:** These investments relate to companies that operate in the coal, oil and natural gas, and nuclear energy sectors.
- Investments in funds: These investments relate to investments in funds that contain assets linked to coal.

**Planned actions for the engagement strategy:** Existing engagements will be continued into 2025 and the number of engagements will be increased.

Planned actions for sustainable investments: The initial target of building up a sustainable investment volume of €2 billion by 2025 was first achieved in 2023. A volume of €2 billion is to be maintained in 2025 and the years that follow.

## 2.3.4 Targets related to climate change mitigation and adaptation (E1-4)

### Targets related to the decarbonisation strategy SBTi targets for the investment portfolio

With regard to the decarbonisation strategy, the SBTi targets focus on reducing emissions intensity, promoting renewable energy and investing in companies validated by the SBTi.

UNIQA has set interim targets in four asset classes for investments validated by the SBTi and that comply with the 1.5°C limit climate pathway.

In the base year of 2021, SBTi interim targets covered 23 per cent of investments. These relate to the activities required according to SBTi guidance. The remaining portion of the investments comprised 19 per cent of optional activities and 58 per cent of activities outside the scope of the SBTi guidance. Investments allocated to the unit-linked and index-linked life insurance business were excluded from the target setting process, as UNIQA has limited influence on the selection of investments.

# Science-based climate targets for the investment portfolio

exclusively for the generation

of renewable electricity by

Target definition	Unit	Base year (2021)	Target year (2027)	Target year (2030)
Listed shares and corporate bonds				
SBTi validated share of	% of			
investment volume for this	investment			
asset class	S	23 %	48 %	-
Project financing for electricity generation				
Reducing financed emissions	t CO <sub>2</sub> e/			
by 74.2% per MWh	MWh	0.224	-	0.058
Other long-term corporate loans				
SBTi validated share of	% of			
investment volume for this	investment			
asset class	S	3 %	34%	-
Corporate loans for electricity producers				
Provision of corporate loans		esent, corpora ely for the ger		

The metric applied for the SBTi target for the asset class "Project financing for electricity generation" is the emissions intensity stemming from electricity generation for the funded projects (tonnes of  $CO_2e$  per megawatt hour generated). The emission factor applied to calculate the financed emissions is based on average figures for the respective energy sources. The figures for emissions and energy produced are based in part on projected figures.

electricity. The target is to continue financing

only corporate loans for renewable electricity

generation.

The data is obtained from ISS and directly from the companies in question. The assets covered by each target category are reviewed on a regular basis. In line with the SBTi framework, the targets are renewed at five-year intervals.

#### Targets for weighted average carbon intensity

Portfolio decarbonisation is focused on emissions stemming from investments in companies. The GHG emissions arising from these investments are calculated on the basis of the weighted average carbon emission intensity (WACI). The WACI is used to manage the portfolio according to the companies' emissions efficiency. If the WACI contribution of a certain investment would result in the portfolio WACI limit being exceeded, the investment in question is not pursued.

Development of the WACI metric is monitored by Risk Management using a limit system.

Current targets for the WACI metric were set on the basis of the requirements of the Net-Zero Asset Owner Alliance.

Weighted average carbon emission intensity int CO <sub>2</sub> e / € million revenue	Base year (2021)	Financial year (2024)	Target year (2025)	,	Annual reduction in % from 2021 to 2030
Scope 1 and Scope 2 emissions	99	44	60	40	9.50%

For companies, this metric is calculated as the sum of Scope 1 and Scope 2 emissions relative to the company's revenue, weighted by the investment volume. A breakdown according to Scope 1 and Scope 2 emissions is not carried out. The data is sourced from ISS and is largely based on data reported by the respective emitters.

The companies' Scope 3 emissions are tracked but not included in the metric. At present, Scope 3 emissions are considered to be only of limited informative value owing to the fact that the data is not always plausible and fully disclosed. This was likewise affirmed by the Net-Zero Asset Owner Alliance, which will include corresponding disclosures in its requirements once the base data is considered reliable. From then on, disclosures will be reported on Scope 3 emissions.

As both the WACI target pathway and the SBTi targets are subject to regular updates, any further changes to the Net-Zero Asset Owner Alliance and SBTi methodologies are applied when the targets are updated. Regulatory changes are likewise taken into account when the targets are updated.

#### Targets related to the engagement strategy

As things currently stand, no specific targets have been established for the engagement metrics. In keeping with its membership in the Net-Zero Asset Owner Alliance, UNIQA's bilateral engagements will focus on the companies that together account for 65 per cent of Scope 1 and Scope 2 financed emissions up to 2027.

#### Targets for sustainable investments

UNIQA finances companies that make a contribution to reducing emissions or to social projects through its sustainable investments. As a member of the Net-Zero Asset Owner Alliance, UNIQA has set itself the target of allocating  ${\in}2$  billion to sustainable investments by 2025. This target was already exceeded in the 2023 financial year and further increased to  ${\in}2.4$  billion in the year under view. As a result, the share of sustainable investments in the overall portfolio amounts to 11 per cent. The volume and composition of sustainable investments are reviewed on a monthly basis by Risk Management.

Sustainable investments comprise:

- 78 per cent green bonds
- 7 per cent social bonds
- 5 per cent sustainability bonds
- 5 per cent Article 9 Funds according to the EU Disclosure Regulation (SFDR)
- 5 per cent sustainable infrastructure projects and technologies (wind power projects, social facilities)

## 2.3.5 Gross Scopes 1, 2, 3 and Total GHG emissions (E1-6)

Category 3.15 financed emissions provide an indication of the GHG emissions financed through investments in companies and governments. These metrics give UNIQA the ability to manage the impacts of climate change and to control climate change adaptation.

The coverage of total financed emissions by investments in listed companies, corporate bonds (excluding collateralised debt), corporate loans and government bonds came to 52 per cent in the financial year.

## Absolute financed emissions from investments in companies (Scope 3.15)

Absolute financed emissions for companies are calculated by multiplying the holding in a company by the Scope 1, Scope 2 and Scope 3 emissions it produces. Financed emissions include Scope 1, Scope 2 and Scope 3 emissions produced by the investee companies. The coverage of total financed emissions by investments in listed companies, corporate bonds (excluding collateralised debt) and corporate loans came to 82 per cent in the financial year. The absolute financed emissions are subject to the Group-wide target of achieving net-zero emissions by 2050. In the financial year, financed emissions from investments in companies resulted in 4,520,772 tonnes of  $CO_2e$ . The volume invested amounted to  $\mathfrak{C}$ 5,929.3 million.

Scope 3, Category 15: Companies (Financed Emissions)	Financial year (2024)
Scope 1 and Scope 2 financed emissions produced by companies	311,638
Scope 3 financed emissions produced by companies	4,209,134

The following table provides a breakdown of financed emissions (Scope 1 and 2) according to the NACE code (statistical classification of economic activities in the European Community) for the 2024 financial year. The weighted average PCAF data quality factor for the entire portfolio is 1.4. The PCAF data quality factor is a measurement framework used to assess the quality of data used to measure and report GHG emissions in financial portfolios. The data quality factor ranges from 1 (the highest quality level) to 5 (the lowest quality level). The factor is based on the availability and accuracy of the data used to calculate emissions, with lower data quality factors assigned to direct, verifiable data and higher-value data quality factors assigned to estimates or inaccurate data. The data quality factor is provided by ISS, weighted according to the financed volume and aggregated at the NACE code level.

NACE code	Investments	Financed emissions	PCAF data quality factor
	in € million	in t CO₂e	
A - Agriculture, forestry and fishing	-	-	0
B - Mining and quarrying	11.7	13,306	1.8
C - Manufacturing	441.1	117,163	1.2
D - Electricity, gas, steam and air conditioning supply	187.5	34,151	1.1
E - Water supply, sewerage, waste management and remediation	-	-	0
F - Construction	790.5	132,940	1
G - Wholesale and retail trade, repair of motor vehicles and motorcycles	28.1	1,439	1.8
H - Transportation and storage	141.8	7,625	1.1
I - Accommodation and food service activities	15.4	20	2
J - Information and communication	175.4	2,659	1.2
K - Financial and insurance activities	3,948.7	1,528	1.1
L - Real estate activities <sup>1)</sup>	27.3	99	1.5
M - Professional, scientific and technical activities	14.0	613	1.7
N - Administrative and support service activities	0.5	6	1
O - Public administration and defence; compulsory social security	15.1	0.37	2.2
P - Education	-	-	0
Q - Human health and social work activities	5.5	87	1
R - Arts, entertainment and recreation	-	-	0
S - Other services activities	-	-	0
T - Activities of households as employers; undifferentiated goods- and services- producing activities of households for own use	-	-	0
U - Activities of extra-territorial organisations and bodies	126.4	2	1.2
Aggregated at the portfolio level	5,929.3	311,638	1.4

<sup>1)</sup> This item includes only real estate funds. Physical real estate investments are not included.

The PCAF data quality factor covers 100 per cent of company-financed emissions.

## Absolute financed emissions from government bonds (Scope 3.15)

Financed emissions from investments in government bonds cover the Scope 1, Scope 2, and Scope 3 emissions produced by the countries in question. The data for Scope 1 emissions from countries that report corresponding figures on an annual basis is sourced from ISS under the United Nations Framework Convention on Climate Change (UNFCCC). Emissions data from countries that do not disclose corresponding figures on an annual basis are estimated by ISS on the basis of climate-relevant data published by research institutes, state authorities and international organisations.

ISS obtains Scope 2 and Scope 3 emissions data from OECD data on GHG emissions related to international trade. Sixty-four countries have reported emissions data on this basis. The OECD allocates 137 countries to the "Rest of the World" category. ISS allocates the GHG emissions from this category to individual countries on the basis of macroeconomic metrics.

The data covers 99 per cent of direct investments in government bonds. UNIQA's financed emissions are calculated on the basis of the value of the respective government bond, divided by GDP adjusted for inflation, multiplied by the sum of Scope 1, Scope 2 and Scope 3 emissions produced by the country in question according to the PCAF methodology.

During the financial year, financed emissions from investment in government bonds amounted to 1,924,006 tonnes  $CO_2e$ . The volume invested amounted to  $\mathfrak{C}$ 7,105.6 million.

Emissions data for investments in corporate shares and bonds is sourced from ISS. Raw data reported to ISS on a monthly basis is imported into a data management system to monitor and assess data relevant for integration into the investment process. ISS uses internal models to model data where corporate emissions data is unavailable.

#### 2.4 CLIMATE CHANGE IN CORPORATE BUSINESS

## 2.4.1 Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3)

The materiality assessment identified several material impacts and risks linked to climate change related to corporate business. By offering sustainable products and product components as well as advisory services that enable customers to reduce the level of risk to which they are exposed due to the impacts of climate change, insurance customers benefit from positive impacts while UNIQA secures a financial opportunity. Conversely, a lack of control metrics, strategies, policies and action plans together with an associated lack of engagement on the part of UNIQA can reduce the willingness of corporate customers to address negative impacts with regard to climate change adaptation and mitigation. Climate change also constitutes a core physical risk for UNIQA itself, as it increases the frequency and intensity of natural disasters such as floods, hail, storms or extreme temperatures. If they were to occur, these events could result in losses to insurance customers that are yet to be covered under current insurance premiums.

## 2.4.2 Policies related to climate change mitigation and adaptation (E1-2)

Requirements related to sustainability in the corporate insurance business are centrally governed by the UNIQA Corporate Business Strategy. The Chief Corporate & Affinity Officer is responsible for implementing the corresponding requirements.

The sustainability strategy comprises three key pillars:

- Strengthening customer resilience to climate-related
- Decarbonisation of the insurance portfolio
- Development of new sustainability products and product components

### 2.4.2.1 Strengthening customer resilience to climate-related risks

UNIQA is committed to taking on an active role in helping customers strengthen their financial resilience and managing the impacts of climate change adaptation.

Advice and prevention: UNIQA advises companies on how to strengthen their resilience to the risks arising from climate change. First aid measures are provided to this end, whereby policyholders are given access to advisory services to mitigate losses in the event of severe weather events. Preventive actions to avert climate-related risks are also prepared and offered.

Improving competency and quality: UNIQA aims to improve the ability of its customers to address climate risks, to improve the quality of standard risk resilience measures and to offer comprehensive advice to meet growing demand for coverage of emerging climate risks among companies.

### 2.4.2.2 Decarbonisation strategy and nuclear energy for the insurance business

In 2023, decarbonisation targets were published and the following actions defined with the goal of achieving netzero emissions:

#### Fossil fuel phase-out

The first steps towards decarbonisation were taken back in 2019 with UNIQA's commitment not to enter into new business with customers that engage in coal-related activities. As a member of the Green Finance Alliance (GFA), UNIQA has published a schedule for the phase-out of its activities in the coal, oil and gas sectors. Since then, premiums from the fossil fuel business and the decarbonisation status of the affected customers have been reported on an annual basis. The phase-out of fossil fuels in the insurance business involves the following key elements:

#### Coal

- Since 2019, no new insurance contracts have been concluded with companies that generate more than 30 per cent of their revenue from activities in the coal sector (production, processing, power generation)
- Since 2023, no new business has been entered into with companies that generate more than 5 per cent of their revenue from activities in the coal sector

 By 2030, all portfolio items with companies that generate more than 5 per cent of their revenue from activities in the coal sector will expire

#### Oil

- Since 2024, no new insurance contracts have been concluded with companies that generate more than 30 per cent of their revenue from activities in the oil sector (production, processing, power generation)
- By 2030, all portfolio items with companies that generate more than 5 per cent of their revenue from activities in the natural gas sector will expire

#### Natural gas

- From 2025 onwards, no new insurance contracts will be concluded with companies that generate more than 30 per cent of their revenue from activities in the natural gas sector (production, processing, power generation)
- By 2035, all portfolio items with companies that generate more than 5 per cent of their revenue from activities in the natural gas sector will expire
- In deviation from the gas phase-out stipulated in the decarbonisation strategy, in 2025 UNIQA will make a temporary exception for the territory of Ukraine and offer new insurance coverage for small-scale gas-fired power plants in light of the ongoing war and the energy infrastructure that has been severely affected as a result

Companies that have made a public commitment to the decarbonisation of their core business in accordance with the Paris Agreement are exempt from the phase-out of fossil fuels.

#### Nuclear energy

UNIQA does not insure nuclear energy risks either directly or through reinsurance.

#### Expansion of the renewable energy business

Decarbonising energy supplies plays a crucial role in limiting global warming to 1.5°C in line with the targets set forth in the Paris Agreement. UNIQA is therefore working on renewable energy insurance solutions to support this growing sector.

The premium volume in the renewable energy segment is growing year after year. Renewable energy premiums are categorised as follows:

- Premiums from companies whose main economic activity is generating power from renewable energy sources (solar energy, wind, biomass, hydropower, geothermal energy)
- Premiums for insured renewable energy installations owned by companies that primarily engage in other economic activities (photovoltaic installations, hydropower plants, biomass power plants)

## Engagement with companies with the highest share of emissions in the portfolio

A portfolio analysis of insurance-associated emissions revealed that CO2 emissions are broadly spread across the entire portfolio. However, the largest emitters were found to be large industrial companies. In response, a new objective was formulated, according to which the top 10 emitters in each market would be required to undergo an indepth analysis. As of 2024, in each country where UNIQA operates and where insurance-associated emissions are calculated, the top 10 CO<sub>2</sub> emitters in the portfolio are evaluated with regard to whether they have a climate strategy in place and pursue targets in line with the 1.5°C trajectory set forth in the Paris Agreement. This metric supports UNIQA's net-zero emissions target and provides greater insight into how the specific customer structure in each market - especially in the high-emission sectors can be used to work toward the decarbonisation goal for the portfolio. Examples of carbon-intensive sectors include the heavy industrial sector, the energy sector and the transport sector.

Specific definitions and timetables have been published in the decarbonisation statement. The declining absolute premiums for fossil fuel companies and their declining share in insurance premiums underscore the achievement of the targets set and confirm the steady trend toward portfolio decarbonisation.

## 2.4.2.3 Development of new sustainability products and components

UNIQA is pushing ahead with the development of innovative sustainability products and components in response to increasing market requirements and growing demand for environmentally friendly solutions. This strategy also encompasses the development of new business lines through which customers are supported in reducing negative impacts related to climate change mitigation, climate change adaptation and energy consumption.

UNIQA also promotes a sustainable recovery from loss events through specific new solutions and product components. In the financial year, for example, the new Green Clause product component was launched on the basis of which the additional costs for the ecological restoration of damaged properties will also be borne in loss events.

## 2.4.3 Actions and resources in relation to climate change policies (E1-3)

In 2024, the launch of consulting in relation to sustainable business solutions marked a key step in the measures taken in the corporate business. A comprehensive calculation of insurance-associated emissions in the portfolio was also carried out for the entire group, supplemented by a detailed portfolio analysis. Metrics and specific targets for the decarbonisation of the insurance portfolio were established on this basis. Both the sustainability strategy and the sustainability targets were published as part of improving transparency and the focus on targets. Another main priority involved the establishment of a framework and continuing with the strategic phase-out of fossil fuels. At the same time, UNIQA is increasingly focused on solutions and partnerships for renewable energy insurance.

#### Progress on the decarbonisation of the insurance portfolio

In its climate strategy, UNIQA sets out its aim to decarbonise its corporate customer portfolio in line with the climate objectives of the Paris Agreement. As part of these efforts, companies that operate in the coal, oil and natural gas sectors are analysed on a continuous basis. The focus here is on assessing the commitment of the corresponding customers to climate-related targets and decarbonisation strategies.

2022 is used as the base year for measuring the premiums for fossil fuels.

# Gross premiums in the corporate customer non-life insurance business for companies that operate in the coal, crude oil or natural gas sectors

in € million	
Coal	16.5
Crude oil	1.7
Natural gas	22.4
Share of premiums from coal companies in property and casualty insurance products	0.4%
Share of premiums from crude oil companies in property and casualty insurance products	0.0%
Share of premiums from natural gas companies in property and casualty insurance products	0.5%

2024

Since 2023, all remaining coal, oil and natural gas customers in the portfolio have been monitored based on available data with regard to their commitment to climate-related targets and relevant climate strategies. The results of the first step (analysis of publicly available data) provide a clear overview of which customers may require further analysis. In this case, direct written contact would be made. This does not include companies that have set science-based climate targets (time horizon: 2050, including five-year interim targets) and are decarbonising their core business in line with the Paris Agreement, or projects that are in line with the Paris targets. According to the analysis of the published data, customers that already publish climate and decarbonisation targets accounted for 16 per cent of customers in the financial year. UNIQA plans to work with coal and oil customers who have yet to define their own decarbonisation pathway in order to obtain confirmation of their climate plans by the end of 2026. Contracts with coal and oil customers that do not commit to emissions reduction plans in line with the Paris Agreement will not be renewed. The same procedure is planned to be applied to natural gas customers from 2031 onwards.

Status of coal, crude oil and natural gas customers in the corporate customer business portfolio in the 2024 financial year	Customers (total)	of which status A	of which status B	of which status C
Number of customers linked to coal	76	12	16	48
Number of customers linked to crude oil	20	6	2	12
Number of customers linked to natural gas	137	19	32	86

The status presented in the table is to be understood as follows:

Status A: The company has set climate targets in accordance with the climate pathway under the Paris Agreement. Information available from public sources.

Status B: No public decarbonisation plan but measures are being taken to develop a separate sustainability agenda.

Status C: No relevant climate strategy information available.

#### Share of customers with climate targets in place

As a member of the Green Finance Alliance (GFA), UNIQA wants to ensure that all insured companies within the European Union that are required to report under the Non-Financial Reporting Directive (NFRD) and/or the Corporate Sustainability Reporting Directive (CSRD) since 2024 have set climate targets compatible with the 1.5°C limit pathway defined in the Paris Agreement (net-zero targets or SBTi targets) for their respective core business by 2040. As a first step, the current status in the financial year was determined based on the following metrics for Austrian corporate customers:

# Share of Austrian customers with climate targets subject to mandatory reporting requirements under NFRD/CSRD

Ratio between the number of insured companies subject to NFRD/CSRD reporting requirements with a target to limit global warming to 1.5°C for their core business and the total number of insured companies subject to 100% NFRD/CSRD reporting requirements 48% 16% Ratio between the gross annual premiums of insured companies subject to NFRD/CSRD reporting requirements with a target to limit global warming to 1.5°C for their core business and the gross annual premiums of insured companies subject to NFRD/CSRD reporting requirements 54% 55% 100%

#### Results of the sustainability risk assessment

UNIQA created the UNIQA Corporate Business Environmental, Social and Governance Standard in 2023 to enable its business processes to adapt to emerging sustainability risks. This standard supplements the UNIQA Corporate Business Standard. It outlines the critical impacts of ESG factors on business decisions and describes how to approach customers in sectors exposed to greater sustainability risks. The standard also covers the cooperation with customers required before and after a claim is submitted to increase their resilience to climate risks.

The following sustainability risks are assessed:

E - Environmental matte	G - Governance matters	
Climate change	Human rights	Corruption and money laundering
Pollution	Controversial weapons	Poor corporate governance
Protected sites/species		Poor product and service quality
Non-sustainable practices	5	
Animal welfare and testin	ıg	

As the data used for the Swiss Re ESG risk rating is industry-specific, additional analyses were carried out for customers found to have a potentially high sustainability risk. Country factors were used to obtain an overview of the portfolio's ESG risk exposure. In the next step, during the financial year, an analysis was conducted to determine the

number of enquiries that were rejected due to sustainability risks. The analysis starts with the fossil fuel business. Information on how many enquiries were passed on for an ESG assessment and how many were rejected is reported. This also makes it possible to quantify the financial impacts of the transition risks.

## Results from the sustainability risk assessment of customers with fossil-fuel related activities

Financial year

Number of enquiries involving ESG risk	120
of which rejected	69
of which approved subject to conditions	21
of which approved	30

In early 2025, UNIQA will publish its official framework, which sets out the procedure for forwarding enquiries that may involve sustainability risks, the assessment process and reporting requirements. Internal processes will then be improved on this basis through updates to guidelines and detailed guidelines for ESG advisors on the ESG assessment procedure. The ESG Advisor Policy is reviewed every six months to ensure that it is up to date.

## Results of the analysis of the companies with the highest emissions in the portfolio

In its Corporate Business Sustainability Strategy, UNIQA outlines its commitment to analysing the top ten issuers as one of the actions taken to decarbonise its portfolio. The results show that the top 10 emitters combined account for half of the total emissions. Several metrics were defined for the analysis, including the company's net-zero commitment, SBTi commitments and the availability of reliable information on the company's sustainability agenda. The analysis revealed that 35 per cent of the companies have set net-zero targets; 44 per cent of the companies disclose specific information on their sustainability agenda, even though they have not explicitly committed to net-zero; and 21 per cent of companies do not publish sustainability information.

#### Renewable energy business

In the financial year, the renewable energy segment achieved a premium volume of €23.3 million.

The UNIQA corporate customer business consistently supports business growth through renewable energy in all countries in which UNIQA operates. Examples include strategic partnerships with banks as well as photovoltaic and wind power companies. In addition, UNIQA offers special products for photovoltaic power plants and small-scale photovoltaic installations. Advice is also provided during the planning phase of renewable energy projects to enhance the safety and resilience of installations.

## 2.4.4 Targets related to climate change mitigation and adaptation (E1-4)

In its sustainability strategy, UNIQA states its public commitment to achieving net-zero emissions in Austria by 2040 and across the Group by 2050 for its insurance portfolio. Five-year interim targets have also been set for reducing insurance-associated Scope 3 emissions on the path towards the net-zero target. 2022 is used as a base year.

Insurance-associated emissions (Scope 1 & 2)	Austria	Other countries in which UNIQA operates
Baseline value 2022 in t CO₂e	34,336	58,087
2025	<b>-5%</b>	-5%
2030	-20 %	-15%
2035	-40 %	-25%
2040	-60 %	-40 %
2045	-	<b>-45</b> %
2050	-	-50%

Owing to the improved data quality, the insurance-associated Scope 1 & 2 emissions for the Austrian portfolio were retroactively recalculated for the 2022 base year, changing from 20,164 to 34,336 tonnes of  $CO_2e$  as a result.

The following aspects were taken into account when setting the interim decarbonisation targets:

- Local decarbonisation ambitions for the most important countries in terms of premium volumes in which UNIQA operates (Austria, Poland, Czechia, Slovakia, Hungary, Romania, Croatia, Bulgaria)
- Current sector distribution of the portfolio
- Major decarbonisation initiatives (e.g. such as the phasing out of fossil fuels, growth of the renewable energy business)
- The countries' nationally determined emission reduction plans for the industries represented (in particular energy, heavy industry, transport, and waste); however, these are not currently validated in terms of whether they align with the Paris Agreement's target of limiting global warming to 1.5°C
- The level of ambition for the interim targets is in line with the decarbonisation commitments of the states represented and is reinforced by the comprehensive decarbonisation agenda
- At present, UNIQA has no specific targets in place for premiums from renewable energy sources or sustainability products

## 2.4.5 Gross Scopes 1, 2, 3 and Total GHG emissions (E1-6)

As a member of the Green Finance Alliance (GFA), UNIQA aims to report on its insurance-associated GHG emissions and to set targets to reduce its emissions to net zero in Austria by 2040 and across the Group by 2050. In 2023, the PCAF method for measuring insurance-associated emissions was applied for the first time to analyse the Austrian corporate business portfolio. In the 2024 financial year, insurance-associated issues were calculated for the entire UNIQA Group.

In the financial year, insurance-associated emissions from the corporate business amounted to 172,888 tonnes of  $\rm CO_2e$ . The breakdown by the respective Scope is shown in the table.

Insurance-associated emissions in t CO <sub>Je</sub>	Austria	Other countries in which UNIQA operates
Scope 1 and Scope 2	27,578	84,773
Scope 3	17,997	42,540
Total	45,575	127,313

The calculations take into account insurance-associated emissions produced by the corporate business in the property and technology insurance and liability insurance business lines in Bulgaria, Croatia, Poland, Romania, Serbia, Slovakia, Czechia, Austria, Ukraine and Hungary. These business lines cover 96 per cent of the premiums for the entire industrial insurance portfolio. Calculations were not made for the remaining markets of Albania, Bosnia and Herzegovina, Kosovo, Montenegro and North Macedonia due to incomplete data. For these countries, figures were extrapolated based on the respective premium share. Due to the low data availability, small and medium-sized companies that source standardised products were not included in the calculation.

Insurance-associated emissions were calculated for the insurance sector in accordance with Part C of the PCAF Standard:

 Option 1a: (insurance premium/revenue) × total emissions of the insured entity. This method corresponds to PCAF quality score 1.

Data on emissions is taken from the annual non-financial reports published by the respective companies. Accordingly, the figures are always subject to a time delay as insurance-associated emissions are calculated in January of each year on the basis of emissions data for the previous year. The emissions data for customers from 2023 was used for the portfolio calculation in the financial year.

Data on company revenue was sourced either from the underwriting platform linked to the Bureau van Dijk database or from publicly available financial reports published by customers.

Where public information on revenue was not available, other public sources containing the companies' financial data were used. The PCAF formula was used without the inclusion of revenue (PCAF Option 3) for public institutions, companies with negative revenue and non-commercial companies.

Option 3 of the PCAF standard was used for corporate customers who do not report their own emissions:

• Option 3: Insurance premium × emissions intensity of revenue (based on the NACE code). This calculation corresponds to PCAF quality score 5.

The emission factors applied are the average emissions intensities of the revenue (Scope 1, 2 and 3) generated in the respective sector (NACE code) of Swiss Re (tonnes of  $CO_2e$  per  $\mathfrak E$  million of revenue).

In accordance with Part C of the PCAF Standard, construction all-risk products and assembly all risks insurance products as well as public administration activities (defined by UNIQA as NACE 84) are not included in the calculation of insurance-associated emissions.

The PCAF data quality score for the entire portfolio in UNIQA's corporate business is 4.7.

#### 2.5 CLIMATE CHANGE IN THE RETAIL BUSINESS

## 2.5.1 Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3)

UNIQA has identified several material impacts, opportunities and risks in relation to the retail business. Sustainable elements in retail business products can help customers manage climate change adaptation while reducing their risk exposure to climate-related impacts. UNIQA can provide incentives for decarbonisation and increased energy efficiency among customers through corresponding products. In the medium to long term, the rise in the number of natural disasters constitutes a material physical risk for UNIQA. Among other things, this trend is leading to considerable insurance claims in the agriculture, motor vehicle and household business lines.

## 2.5.2 Policies related to climate change mitigation and adaptation (E1-2)

The aim of the Group's strategic ambitions in the retail business is to help customers reduce their emissions. UNIQA Austria developed an ESG strategy for the retail business in 2024. The scope of the ESG retail strategy is limited to the Austrian market and focuses on the product development process in the property insurance, liability, accidents and motor vehicle business lines. With regard to the environment, the ESG retail strategy relates to climate change adaptation and climate change mitigation.

With a Group-wide product development process policy, UNIQA has set itself the goal of developing products and services with a sustainable mindset and of pursuing an environmentally and socially sustainable approach to value creation. Integrating sustainability matters into product development aligns with the Group-wide sustainability strategy. In the product development process, a target market is defined for each product, taking into account the characteristics, risk profile, complexity and properties of the product in question. Product testing assesses whether the product meets the defined needs, objectives and characteristics of the target market, including sustainability objectives. UNIQA conducts ongoing post-launch monitoring and regularly reviews products to identify any necessary improvements and ensure that the product continues to meet the needs, characteristics and (sustainability) objectives of the identified target market. In Austria, a comprehensive ESG Check was also implemented in the financial year as part of the product development process. This check is based on a guideline for ESG in the product development process, which provides a structured tool for internally reviewing a product's sustainability. It defines material environmental characteristics, including climate change adaptation along with reducing energy consumption and emissions, and social characteristics. The United Nations' Sustainable Development Goals (SDG) likewise provide important guidance in this regard. In order to ensure that the screening criteria are relevant and up-todate, the guideline will be reviewed on an annual basis from 2025 and updated as necessary. While the evaluation process is conducted by a cross-functional team, operational responsibility for the ESG Check rests with the respective product managers. An equally comprehensive ESG Check is yet to be rolled out in other markets. Customer preferences with respect to ESG criteria are also consistently taken into account in product development on the basis of trend and market observations as well as

market research. In Austria, responsibility for implementing these measures lies with the Head of Performance Management, and for the insurance companies and their service providers outside of Austria with the Head of Business Development International. Together with the Management Board members responsible for the Customers & Markets Austria and Customer & Markets International departments, they are responsible for ensuring that the processes are implemented with all the necessary steps.

Another key factor for the ESG-related product assessment is raising awareness among product managers that sustainability issues need to be integrated into the design of new and revised insurance products. In December 2024, for example, the content of the ESG Check was communicated to product managers as part of a Product Owner Governance training course.

In addition to taking sustainability matters into account in the product landscape, great importance is attached to integrating this topic into the advisory process. To help advisors improve their sustainability expertise, UNIQA Austria has developed a comprehensive training strategy that has been implemented since 2024. The strategy includes newly developed seminars, workshops and e-learning courses, as well as the integration of sustainability topics into existing training formats. In other markets in which UNIQA operates, attention will also be paid to ensuring that advisors are highly qualified through workshops, training courses, educational courses, e-learning courses and similar formats from 2025 onwards.

## 2.5.3 Actions and resources in relation to climate change policies (E1-3)

In order to achieve the objectives of the Sustainability Strategy and the Product Development Process Policy and to implement the identified decarbonisation measures, UNIQA was once again able to roll out numerous initiatives in the retail business in the financial year and to further integrate sustainability matters into products and consulting. It is not currently possible to estimate the GHG savings achieved and expected in connection with the climate change mitigation actions undertaken to date.

#### **Actions in Austria**

New ESG components were launched on the market in the Austrian product landscape through product innovations and updates. The "renewable energy technology" component of property insurance now gives customers the ability to insure energy generation and recycling facilities such as solar technology and heat pumps independently of other coverage. In the mobility sector, a new car tariff has been introduced, including dedicated services for electric vehicles and their batteries as well as a carbon pricing model. This model offers price reductions for low-consumption vehicles.

In addition, between April and December 2024, a university course on sustainability among financial service providers was trialled in Austria to offer comprehensive training for managers.

#### Actions in international markets

Other companies in the UNIQA Group are also increasingly focusing on sustainability matters in their products. For example, a carbon pricing model for vehicles that offers advantages for vehicles that produce lower  $\rm CO_2$  emissions has been on the market in Czechia and Slovakia since 2023 and in Croatia since 2024.

## 2.5.4 Targets related to climate change mitigation and adaptation (E1-4)

Quantitative targets and corresponding action plans for the strategic focus areas in the retail business in accordance with the target of 1.5°C defined in the Paris Agreement are still being prepared and will be published within the next two years. Until then, the focus will be on integrating ESG criteria into product development, as well as on updating and providing appropriate customer advisory. There is currently no mandatory guideline in place for measuring the effectiveness of ESG criteria in product development. The ESG guideline and/or the associated ESG Check in the product development process merely ensure the consistent internal evaluation of ESG features and their transparency. A quantitative data model is currently being developed to supplement this and will provide the basis for further monitoring of the ESG Retail Strategy in the future.

## 2.5.5 Gross Scopes 1, 2, 3 and Total GHG emissions (E1-6)

Regarding the retail business, UNIQA quantifies insurance-associated Scope 3 emissions from the motor portfolio of private individuals based on a calculation model and estimates in line with the PCAF Standard. This produces figures on GHG emissions that can be allocated to the insured vehicles. Emissions produced by a vehicle are attributed to the insurance company on a pro rata basis. The resulting findings make it possible to map the impacts of vehicles insured by UNIQA on the climate.

In order to calculate the corresponding emissions, the annual distance travelled by the respective vehicle is multiplied by a country-specific attribution factor. The allocation factor applied for the pro rata allocation of insurance-associated emissions produced by the UNIQA motor portfolio is derived from an additional document published by PCAF. The countries listed in the document are taken into account on the basis of the factors specified therein. The share of insured emissions in Austria is 7.71 per cent. A country-specific average of 4.48 per cent is applied for countries that are not listed.

Due to the lack of sufficient local databases to extrapolate the average distances travelled in certain countries, UNIQA applies the figures released by the German Federal Motor Transport Authority as the source. When calculating emission figures for vehicles powered by combustion engines and hybrid engines, the respective average emission figures for each listed vehicle specific to the brand and year of registration published in the European Environment Agency (EEA) database are taken into account. When calculating emissions produced by electric vehicles, the country-specific electricity mix is taken into account through the grid emission factor, which reflects the emissions intensity of the respective country's electricity generation.

In general, the quality of the data used is evaluated in line with the PCAF Standard on a scale of 1 to 5. The lower the score, the higher the quality. The PCAF Standard provides three different options for calculating insurance-associated emissions. The first option is based on actual vehicle-specific emissions derived from actual consumption or performance data. The second option is based on estimated vehicle-specific emissions derived from statistical data. The third option is based on estimated non-vehicle-specific emissions derived from general statistical averages. Due to the limited availability of data, UNIQA uses all three options.

In light of the uncertainty with regard to primary data in certain countries and the limited availability of countryspecific secondary data for kilometres driven, a PCAF score of 5 was calculated for the financial year. In particular, the dependence on secondary sources makes it difficult to provide a more precise account of emissions. In certain instances, the current data quality aligns with the definition of better (lower) scores, such as emission intensity, based on the specific make and model of the vehicle. At present, it is not always possible to calculate emissions separately for individual vehicle groups for the Austrian market. In this scenario, figures are extrapolated on the basis of the parts of the insurance portfolio for which emissions information is available. In the financial year, insurance-associated emissions from the motor portfolio amounted to 393,405 tonnes of CO2e.

UNIQA plans to improve the accuracy and transparency of its motor portfolio calculations. One of the primary objectives is to refine the data sources used to calculate the kilometres travelled in the respective countries. This can be achieved through external partnerships or by using meaningful internal data sources, which would require collecting more detailed information on consumption behaviour, for example with regard to charging cycles and kilometres driven.

## 2.6 CLIMATE CHANGE IN RELATION TO REAL ESTATE AND OWN OPERATIONS

## 2.6.1 Material impacts, risks and opportunities and their interaction with strategy and business model (ESRS 2 SBM-3)

UNIQA has identified several material impacts, risks and opportunities associated with real estate and its vehicle fleet with regard to climate change adaptation, mitigation and energy consumption. The failure to adequately reduce GHG emissions (Scope 1 and 2) in relation to both real estate and the vehicle fleet represents one material impact, which has the potential to further increase the GHG intensity in the atmosphere. Another material impact stems from energy consumption, which could put significant strain on the power grid in the event of energy crises or greater dependence on volatile renewable energy. To counteract this, actions to increase the energy efficiency of buildings and investments in renewable energy are planned in order to reduce the load on the grid and to cover a share of UNIQA's energy requirements. In addition, there is a physical climate risk that extreme weather events may cause damage to both owner-occupied properties and properties held as financial investments. Further transition risks result from increasing regulatory requirements governing emissions and energy efficiency, which may ultimately result in stranded assets in the event of non-compliance. Particularly in times characterised by limited energy availability and high energy costs, dependence on external energy suppliers could pose a financial risk for the ongoing operation of UNIOA sites.

To assess the risks of environmental events to investment properties, a climate risk analysis was carried out in the financial year for 74 per cent of the properties with a fair value of around €3.0 billion (see also the "Investments and taxonomy-eligible activities" chapter of the Principles for reporting on the EU taxonomy). A high climate risk was identified for two of the properties analysed. In the future, climate risk analyses will be carried out on investment properties as well as owner-occupied properties to ensure that the entire owned property portfolio has been assessed with regard to risk. The climate scenario RCP 8.5 (global temperature rise of 4.3°C by 2100) for the period 2020 to 2100 was applied for climate risk analyses. The climate risks assessed, including floods, storms, and heat stress, are based on the specifications of the EU Taxonomy. Based

on the analysis, a financial risk of  $\[ \in \]$ 7.6 million was determined for the EU taxonomy-eligible investment properties. The risks identified will be examined in detail and shortcomings remedied with appropriate measures.

## 2.6.2 Policies related to climate change mitigation and adaptation (E1-2)

The climate strategy pursued by UNIQA aims to mitigate the risks of climate change while simultaneously leveraging opportunities to drive the transformation to a climateneutral economy. The strategy is closely linked to the goals of the Paris Agreement and follows the 1.5°C trajectory. This applies to both owner-occupied properties held by UNIQA and investment properties. Responsibility for the operational implementation of the strategy lies with the member of Management Board for Operations with respect to the vehicle fleet and the member of the Management Board for Asset Management with respect to the properties. The strategy encompasses climate change adaptation, climate change mitigation, energy efficiency and renewable energy, and is based on the following priorities:

## Decarbonisation of real estate and increase in energy efficiency

UNIQA has set itself the SBTi-validated target of reducing the GHG emissions (Scope 1 and 2) of owner-occupied properties by 42 per cent by 2030 compared with the base year of 2021. Under the long-term climate strategy, owner-occupied properties held by UNIQA as well as investment properties in Austria will reach net-zero emissions by 2040 and in all other countries in which UNIQA operates by 2050. To this end, measures such as thermal renovations, transitioning to sustainable heating systems, greater use of certified electricity from renewable sources and improving energy efficiency are planned with actions such as optimising heating, air-conditioning and ventilation systems along with expanding energy monitoring.

#### Electrification of the vehicle fleet

Electrification of the vehicle fleet is another lever for decarbonisation. The goal is to achieve a complete transition to electric vehicles by 2030 in Austria and by 2040 across the Group. Plans include accompanying the transition with an expansion of the charging infrastructure for electric vehicles and additional training on saving fuel.

#### Use of renewable energy

For several years now, UNIQA sites in Austria have exclusively purchased energy from renewable sources for owner-occupied properties, and since 2024, only electricity certified according to Eco-label Guideline UZ 46 has been purchased. In addition, photovoltaic installations are continually being expanded in order to reduce both energy consumption and the company's environmental footprint. A transition to renewable energy is also planned for heating systems. By 2035, all oil and gas heating systems and direct heating systems at the Austrian sales offices will be replaced by more environmentally friendly alternatives such as district heating, heat pumps and biomass heating systems.

#### Management systems

As a further component of the sustainability strategy, UNIQA integrated its existing in-house energy management system into an EMAS and ISO 14001 certified environmental management system in the reporting year at both the Austrian sales offices and PremiQaMed Group company sites. The objective behind this move is to continuously improve environmental performance based on a systematic approach and to minimise negative environmental impacts.

## 2.6.3 Actions and resources in relation to climate change policies (E1-3)

In 2024, UNIQA invested €3.0 million in order to reduce the GHG emissions of properties and to adapt to climate change. A further €6.6 million investment volume is planned for 2025. These investments are aimed at achieving the Paris climate targets and interim targets in line with limiting global warming to 1.5°C and improving the physical resilience of the properties owned by UNIQA. They make a significant contribution to achieving UNIQA's SBTi targets and net-zero emissions by 2040 in Austria, and by 2050 in all other countries in which UNIQA operates.

In terms of buildings, the transition to sustainable heating systems such as heat pumps, biomass heating and district heating plays a major role. A further  $\[ \in \]$ 0.5 million was invested in 2024, with an additional  $\[ \in \]$ 1.5 million investment planned for 2025. In the financial year, 4 fossil fuel heating systems were replaced by greener alternatives, resulting in an estimated 25 tonnes of Scope 1 GHG emissions saved each year. By 2035, all oil and gas heating systems at the Austrian sales offices will be replaced by more environmentally friendly alternatives such as district heating, heat pumps and biomass heating systems.

UNIQA is also investing in reducing energy consumption. Several properties have been thermally renovated to date, particularly through the insulation of facades and basement ceilings and by replacing windows. In 2024, €2.5 million was allocated to thermal renovations, with a further €5.2 million earmarked for 2025. The measures taken to date have been accompanied by the expansion of the comprehensive energy monitoring system launched in Austria back in 2018 to five additional sites in Central and Eastern Europe. Energy monitoring has enabled UNIQA to achieve estimated annual savings of 66 MWh in district heating and 112 MWh, reducing Scope 1 and Scope 2 emissions (location-based) by an estimated 39 tonnes of CO<sub>2</sub> as a result. The monitoring system is designed not only to increase efficiency, but also to continuously optimise energy consumption. The aim behind this is to reduce dependence on external energy suppliers and increase resilience in the event of energy crises.

Photovoltaic systems with a total capacity of 205 kWp were installed at three sites in Austria in the financial year. According to estimated figures, this will reduce Scope 2 GHG emissions (location-based) by 64 tonnes of  $\rm CO_2e$  each year.

In addition, 39 electric vehicles were newly acquired in Austria, increasing the share of this propulsion type in Austria from 48 per cent to 57 per cent and saving an estimated 54 tonnes of Scope 1 GHG emissions each year.

The materiality of these measures is clearly reflected in their prioritisation: The transition to renewable energy and improving energy efficiency are key to reducing Scope 1 and Scope 2 emission and achieving the decarbonisation targets.

The financial resources allocated to these measures highlight UNIQA's commitment to achieving its climate targets while adapting its real estate portfolio and vehicle fleet to the regulatory and physical requirements brought about by climate change. In 2025, the energy and emissions data from 2023 and 2024 will be analysed to ensure that investments are being channelled to the right areas. Further detailed action plans for achieving the SBTi targets will then be developed on this basis, which will be published at the latest upon the publication of the annual report for the 2026 financial year.

## 2.6.4 Targets related to climate change mitigation and adaptation (E1-4)

UNIQA aims to achieve net-zero emissions in Austria by 2040 and Group-wide by 2050 for both UNIQA's owneroccupied properties and investment properties. The goal for the vehicle fleet is to achieve this target in Austria by 2030 and Group-wide by 2040. To this end, UNIQA has set an interim science-based target and is committed to reducing its Scope 1 and Scope 2 emissions from owner-occupied properties and vehicle fleet by 42 per cent by 2030 against the base year of 2021. Up to and including 2024, Scope 1 and Scope 2 GHG emissions had fallen by a total of 13.3 per cent compared with the baseline value. The baseline value was changed retrospectively in 2024 to 14,510 tonnes of CO<sub>2</sub>e, and now includes all owner-occupied properties (owned and leased). The interim target has been validated by SBTi and is consistent with the 1.5°C limit pathway set in the Paris Agreement.

#### Use of renewable energy

By 2035, 10 per cent of the electricity consumed by Austrian sales offices over the course of the year will be covered by self-generated photovoltaic electricity. At present, this share stands at 8.7 per cent.

#### **EU Taxonomy**

Alignment with the EU Taxonomy provides the main benchmark with regard to investment properties. The target was to increase the EU Taxonomy alignment of investment properties to 74 per cent by the end of 2024 (2023: 63 per cent).

As things stand, it is not possible to provide detailed information on the contribution of the respective decarbonisation levers towards achieving individual targets.

#### 2.6.5 Energy consumption and mix (E1-5)

In the financial year, the total energy consumption of owner-occupied properties combined with investment properties came to 258,168 MWh. As primary data for the entire year is only available for a certain number of the properties, estimation methods have been employed for properties for which primary data is only partially available or not available at all. 70 per cent of owner-occupied properties (in terms of m2 of floors pace; owned and leased) are covered by primary data. 32 per cent of the primary data collected is based on current annual data. whereas 38 per cent is based on historical data such as heating consumption from 1 July 2023 to 30 June 2024. This approach has been validated through internal analyses and comparisons between historical and current annual consumption data. At present, neither current nor historical primary data is available for 30 per cent of owner-occupied UNIQA properties, resulting in a secondary data method being applied instead. By contrast, this share rises to 100 per cent for investment properties. Average values are calculated for these buildings on the basis of energy-relevant building characteristics, and electricity and heat consumption are extrapolated from these figures. Building characteristics that may be considered in the calculation include type of use, floor space, year of construction (if not known, the average energy expenditure category for the years of construction 1977 to 2008 is used as a benchmark), type of electricity purchased, geographical location, type of ventilation, air conditioning and heating system, and energy expenditure categories extrapolated on the basis of heating and cooling degree days. The averages for the respective building characteristics were obtained from databases that are not publicly accessible. The use of smart metres and green leases improves data quality, continuously increasing the share of properties for which primary data is available as a result. Future action plans and property-specific optimisation measures can be developed on this basis for the entire real estate portfolio.

Nevertheless, despite account for the building characteristics, significant differences may arise between estimated and actual energy consumption.

The average heat consumption of owner-occupied properties and investment properties is  $90 \text{ kWh/m}^2$ , with electricity consumption in particular amounting to  $112 \text{ kWh/m}^2$ .

Of the electricity purchased that is consumed in owner-occupied properties, 65 per cent comes from renewable energy sources. Information on the share of renewable energy sources is not available for investment properties.

The energy consumption of the vehicle fleet came to 15,265 MWh, of which 2 per cent was from renewable energy sources. With an annual mileage of 27,276,702 kilometres, the fleet's specific energy consumption is  $56\,\mathrm{kWh/100\,km}$ .

Data on the vehicle fleet was aggregated using software-based fuel card evaluation systems, petrol station receipts, expense claims and driver's logbooks. In cases where data was incomplete or unavailable, an estimate was made at the individual vehicle level, taking into account the respective propulsion or fuel type and the vehicle type. This estimate is based on data from comparable vehicles in the company's fleet along with data sourced from publicly accessible databases.

The fleet data will be analysed in 2025 to outline further measures for achieving the SBTi targets by the 2026 reporting year at the very latest.

Energy consumption and mix	Vehicle fleet	Real estate	Total
(1) Fuel consumption from coal and coal products (MWh)	-	-	-
(2) Fuel consumption from crude oil and petroleum products (MWh)	14,839	329	15,169
(3) Fuel consumption from natural gas (MWh)	-	86,501	86,501
(4) Fuel consumption from other fossil sources (MWh)	-	136	136
(5) Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources (MWh)	100	63,493	63,593
(6) Total energy consumption from fossil sources (MWh) (calculated as the sum of lines 1 to 5)	14,939	150,459	165,399
(7) Energy consumption from nuclear sources (MWh)	41	12,658	12,699
(8) Fuel consumption for renewable sources including biomass (also comprising industrial and municipal waste of biologic origin, biogas, hydrogen from renewable sources, etc.) (MWh)	-	258	258
(9) Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources (MWh)	284	93,652	93,936
(10) Consumption of self-generated non-fuel renewable energy (MWh)	-	1,140	1,140
(11) Total energy consumption from renewable sources (MWh) (calculated as the sum of lines 8 to 10)	284	95,051	95,335
Total energy consumption (MWh) (calculated as the sum of lines 6, 7 and 11)	15,265	258,168	273,433
Share of fossil sources in total energy consumption (%)	98%	58%	60%
Share of consumption from nuclear source in total energy consumption (%)	0%	5%	5%
Share of renewable source in total energy consumption (%)	2%	37%	35%

#### **Energy intensity**

The energy intensity of activities in high climate impact sectors per net revenue from these sectors amounted to 1,464 MWh per € million of net revenue and related exclusively to real estate activities (NACE code L). The numerator for calculating energy intensity is the total energy consumption of investment properties. The denominator comprises all rental income from these properties (see "Investments", "Investment properties" in the Notes to the Consolidated Financial Statements).

## 2.6.6 Gross Scopes 1, 2, 3 and Total GHG emissions (E1-6)

A calculation tool (akaryon ESG Cockpit) was used to calculate the emissions of the real estate and the vehicle fleet and to assign them to the individual scopes. It specifies factors for each substance, such as fuel consumed by the vehicle fleet, which are used to calculate the resulting emissions. These factors are primarily based on the ecoinvent database, version 3.10 (GWP 100, IPCC 2021) and are managed and continuously updated by the software provider. They are applied to the real estate and the vehicle fleet of all consolidated companies.

The input data were determined in accordance with the methods described in "Energy consumption and mix (E1-5)". Refrigerants were only included in the calculation for buildings for which primary data were collected.

In cases where primary data on energy consumption was not available, it was estimated on the basis of the following criteria: property size, year of construction, asset class, heating type, green electricity supply (100 per cent yes/no) and the presence of an air conditioning system.

Emissions resulting from electricity consumption are calculated on the basis of the country-specific average electricity mix. If it can be verified that exclusively green electricity is purchased for a property, emissions are set at zero. Total emissions from district heating are allocated to Scope 2. Based on the assumption that energy consumption will be lower for empty properties, the respective consumption values are reduced by 50 per cent compared with occupied properties.

Emissions from properties (Scope 1 and 2)		Investment properties	Total
Scope 1 GHG emissions			
Gross Scope 1 GHG emissions (t CO <sub>2</sub> e)	1,541	15,895	17,436
Scope 2 GHG emissions			
Gross location-based Scope 2 GHG emissions (t CO <sub>2</sub> e)	11,441	21,720	33,161
Gross market-based Scope 2 GHG emissions (t CO <sub>2</sub> e)	6,959	12,547	19,506

Emissions produced by electricity and heat consumption at investment properties are included in total under Scope 1 and Scope 2.

Vehicle fleet emissions	2024	Target year (2030)	Target year (2040)
Share of electric vehicles in the Austrian vehicle fleet	57 %	100%	100%
Average CO <sub>2</sub> emissions of the Austrian vehicle fleet according to emissions figures reported by vehicle manufacturers (g CO <sub>2</sub> e/km)	35	0	0
Share of electric vehicles in the vehicle fleet outside Austria	1 %	20%	100%
Average CO <sub>2</sub> emissions of the vehicle fleet outside Austria according to emissions figures reported by vehicle manufacturers (g CO <sub>2</sub> e/km)	123	80	0

### 3. The UNIQA workforce (ESRS S1)

## 3.1 MATERIAL IMPACTS, RISKS AND OPPORTUNITIES AND THEIR INTERACTION WITH STRATEGY AND BUSINESS MODEL (ESRS 2 SBM-3)

UNIQA had a workforce of 16,394 employees in the financial year. Employees are defined as any person who is in an employment relationship with and works for UNIQA. This definition does not cover individuals who do not actively work for UNIQA. This mainly concerns persons on parental leave (parental, educational, foster and similar), persons in the passive phase of part-time retirement schemes, persons on company and community service, and persons on other longer-term leave not compensated by the company. The above figure does not include non-employee workers for whom an optional phase-in provision in accordance with ESRS has been applied. Non-employee workers include individuals with whom agreements resembling contracts for work have been concluded (selfemployed people) and workers mediated through labour supply contracts concluded with recruiters. The employees of the insurance business work both in the office and in the field. While sales staff are exclusively assigned to underwriting and policy acquisition, office staff can be responsible for both underwriting and policy acquisition as well as administration. A further significant percentage of employees are employed at various service companies and in the health sector. UNIQA provides its employees with several options with regard to working hours (full-time, part-time, marginal employment) and employs interns and apprentices.

UNIQA's corporate strategy gives HR measures high priority to avoid any potential negative impacts on employees. Employees are given a voice on day-to-day business performance through their dialogue with the Works Council, the employee survey conducted twice a year and their active involvement in strategic measures as part of the new People Strategy. The following topics were identified as being relevant in the short, medium, and long term:

Insufficient action against deliberate or unconscious discrimination could result in certain genders or age groups being underrepresented in the hierarchy, creating unjustified pay gaps, or making it difficult for persons with disabilities to gain access to employment. UNIQA actively

addresses these challenges with its Group Diversity & Inclusion (D&I) Strategy and takes appropriate action to counteract it (see section 3.2 for more information). Employee feedback on how the Group manages diversity is collected as part of the UNIQA employee survey. A special focus is placed on narrowing the adjusted gender pay gap, for which a specific target has been defined (see section 3.6.).

- Following up on incidents such as violence and harassment is also considered crucial. Failure to consistently manage reports or a lack of reporting channels can result in material negative impacts for employees, for example due to psychological stress or fear of possible incidents. UNIQA ensures that human and labour rights are respected by explicitly incorporating the principles of the UN Global Compact into its Code of Conduct.
- Inadequate training measures could restrict the professional development of employees, not only potentially hampering their personal development, but also jeopardising the Group's competitive standing in the long term. In order to promote the professional development of its employees, the UNIQA Group HR Policy sets binding standards for training, supports the corporate strategy and boosts the attractiveness of UNIQA as an employer.
- Due to the nature of the insurance business, there are no special negative impacts with regard to the topics listed above. The negative impacts described stem from factors inherent to the labour market and the general economic dependence of workers on employers and are not attributable to individual circumstances. By the same token, UNIQA's climate strategy and emissions reduction targets do not negatively impact its employees.

Digital innovations, regulatory changes and evolving customer expectations are transforming the insurance industry. New competencies in digital technologies, data analysis and customer experience management are required to operate in this new environment. However, demand for these specialist skills exceeds supply on the labour market. Personnel shortages in the short to medium term constitute an operational risk for UNIQA, which can manifest as a loss of quality in internal processes or breaches of regulatory requirements, for example. Both cause customers to cease doing business with the Group or lead to reputational damage. Personnel shortages can arise in particular if the Group is unable to recruit or retain employees due to UNIQA's lack of attractiveness as an employer, or if insufficient training is provided to help them unleash their full potential. To minimise this risk and to make UNIQA more attractive as an employer, country-specific employee options and development opportunities are offered.

The materiality assessment did not reveal any indications of employee groups that could be particularly affected by negative impacts due to their environment or activities. The only employee groups found to be at risk of potential negative impacts in relation to safe employment were employees on temporary or part-time contracts.

## 3.2 POLICIES RELATED TO UNIQA'S OWN WORK-FORCE (S1-1)

The UNIQA People Strategy is based on five main pillars:

- Employee experience
- Leadership & learning
- Corporate culture
- Diversity & inclusion
- Data & analytics

The People Strategy is available to employees on the intranet, while the Group Diversity & Inclusion Strategy is available both internally on the intranet and publicly online. The aforementioned policies and associated policies (HR Policy and Diversity & Inclusion Policy) are decided by the Group Executive Board (GEB) and apply to all (re)insurance companies and their branches.

#### Labour and human rights

Labour and human rights include the right to freedom of association and collective bargaining and protection against gender, religious and political discrimination in addition to discrimination on national or social grounds. UNIQA does not tolerate child or forced labour, (modern) slavery or human trafficking in its business activities under any circumstances. Although UNIQA does not have a specific human rights policy in place, the principles of the UN Global Compact have been adopted in the form of ten guiding principles in the mandatory Group-wide Code of Conduct. The interests of employees are thereby explicitly reflected in the Code of Conduct. In line with the general whistleblower process, the compliance function investigates and tracks all violations of the code it becomes aware of (see section 6.1.1).

As an insurance company, UNIQA processes a large volume of data as a result of its business activities; the protection of personal data – a fundamental right which also affects the privacy of employees – is emphasised. A Groupwide data protection management guideline also defines data protection guidelines for employees. Further explanations of the impacts, risks and opportunities as well as policies, actions and targets regarding data protection in relation to the company's own workforce can be found in chapter 5 (S4) in the respective "Data protection" sub-sections.

#### Inclusion, diversity and equal opportunity

The Group Diversity & Inclusion (D&I) Policy is part of the Group Human Resources Policy and is also based on the principles of the UN Global Compact. It is governed by local laws and the Disability Employment Act (BEinstG). With seven overarching targets, the Group D&I Policy promotes an environment free of discrimination, bullying and (sexual) harassment with gender equality and equal pay for equal work, as well as equal employment opportunities for persons with disabilities. Ultimate responsibility for the Group Diversity & Inclusion (D&I) Policy lies with the member of the Management Board for People & Brand. According to the policy, managers and employees are required to recognise and report unacceptable conduct. A standardised process must be observed when handling incidents of discrimination, including annual, anonymised reporting on any corresponding cases.

The seven overarching targets of the UNIQA Group D&I Strategy are as follows:

- Equal pay for work of equal value
- Promoting equal opportunity by increasing the percentage of women in management roles
- · Improving generation management
- Promoting work-life balance
- Leveraging the internationality and cultural diversity of the 17 countries in which UNIQA operates as a strength
- Enhancing inclusion and support of persons with disabilities
- Respecting the sexual orientation and identity of every individual

#### Training and skills development

The Group HR Policy sets out requirements and standards for employee development to support the corporate strategy and make UNIQA an attractive employer. The policy is overseen and communicated by the member of the Management Board responsible for People & Brand. A comprehensive learning opportunity is provided to ensure that UNIQA has the capabilities required to achieve its targets. The three pillars of "offer, enable and optimise" provide the basis for employee development.

## 3.3 PROCESSES FOR ENGAGING WITH UNIQA'S OWN WORKFORCE AND WORKERS' REPRESENTATIVES ABOUT IMPACTS (\$1-2)

Maintaining an ongoing dialogue with employees is a top priority at UNIQA. Employee surveys help UNIQA to identify and recognise its employees' needs in order to develop concrete steps designed to increase employee satisfaction, loyalty and identification with UNIQA as an employer. The employee survey has been conducted at least twice a year since 2023. In addition, employees of insurance companies are asked about a wide range of topics along the employee journey every two years in a comprehensive longform employee survey. Overall employee satisfaction (with the exception of employees in Switzerland, Liechtenstein, Albania, North Macedonia and Kosovo) currently stands at 4 out of 5 stars; an improvement of 0.2 stars compared with previous surveys. A total of more than 10,000 employees participated in the last survey. Liechtenstein and Switzerland are not included in the employee survey due to the

inability to provide anonymous feedback owing to the low staff numbers in these countries. Albania, North Macedonia and Kosovo also do not participate in the employee surveys conducted by the UNIQA Group due to the different framework conditions.

In all the countries where UNIQA Group companies are located, employees are represented by works councils or trade unions in accordance with the applicable local laws.

Feedback from the employee survey and from the dialogue with the Works Council is documented, incorporated into decision-making and communicated both on a general basis and by managers. Engagement activities take place across all levels and are centrally monitored. Operational responsibility for incorporating findings into the corporate strategy lies with the member of the Management Board responsible for People & Brand.

## 3.4 PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR UNIQA WORKERS TO RAISE CONCERNS (\$1-3)

All employees can access the UNIQA Group Whistleblower Portal (see information in section 6.1.1) and receive an introduction to the platform as part of compliance training. Reports can either be submitted anonymously or with the disclosure of the employee's or third party's name. Compliance also centrally documents reports received by other units in the whistleblower portal. Beyond this, employees can use the employee survey as a platform for raising their concerns.

3.5 TAKING ACTION ON MATERIAL IMPACTS ON THE UNIQA WORKFORCE, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES, AND EFFECTIVENESS OF THOSE ACTIONS (S1-4)

#### Labour and human rights

UNIQA actively promotes a safe, non-discriminatory work environment. This commitment is set out in clear guidelines such as the Code of Conduct and a comprehensive Diversity & Inclusion Strategy. In addition to the whistleblowing platform in place, UNIQA has launched an elearning module on equal treatment rights in Austria, which is mandatory for all employees. By taking these measures, UNIQA hopes to raise awareness among employees and ensure that neither exclusionary nor inappropriate behaviour, such as violence or harassment, is tolerated. UNIQA also ensures that complaints are handled in a confidential, transparent and respectful manner. Anonymous statistics on complaints and incidents are compiled and published annually in the Diversity & Inclusion Committee (DICO Committee). The Works Council is then informed about the findings.

#### Diversity and equal opportunity

Set forth in the D&I strategy, the principles of gender equality and equal pay for equal work are promoted in the Unconscious Mind, Inclusive Leadership training course, through structured talent management and corresponding succession planning. In addition to an annual mentoring programme that has been in place in Austria since 2021, a reverse mentoring programme designed to bring together young and experienced employees has also been established. The latter was first launched in Austria and the countries in Southeastern Europe in 2024 and is due to be implemented in other countries in stages throughout 2025. Flexible working models, such as job sharing and part-time management models, are designed to help employees on their management career path. An in-house tool is available for the annual salary adjustment process to simulate the impacts of planned updates to the salary structure. The tool is also aimed at simplifying target attainment with regard to the gender pay gap. As a premium sponsor of the 2024 Vienna EuroGames and a supporter of the Queer Ball in Vienna, UNIQA proudly supports the

LGBTQIA+ community, a commitment which has helped foster a strong sense of belonging to the company among community members.

#### Inclusion of people with disabilities

The diversity strategy defines the targeted recruitment of people with disabilities as a key objective in UNIQA's core markets. In the first phase, the focus is on creating and gradually improving the framework conditions. Job shadowing and internships for people with disabilities were offered as part of the UNIOA Ability project. Following the successful pilot phase in Austria and Poland in 2024, in the medium term, plans are to roll out the project to further countries by cooperating with local organisations that promote inclusion of people with disabilities in the labour market. All job vacancies in Austria have been displayed on the myAbility job platform for one year since mid-October 2024 in order to reach this target group even more effectively in future. Additional accompanying measures in 2024 included raising awareness among managers, positioning the company as an inclusive employer through appropriate references in job advertisements and continuous improvement when it comes to accessibility at Group headquarters.

#### Training and skills development

Through ongoing evaluation and the launch of new performance and talent management systems, UNIQA aims to improve training efficiency and promote talent and succession development with a targeted approach. The ultimate goal is to help employees unlock their full potential. Starting in 2025, a new learning management system will be launched to give employees access to state-of-the-art functions such as customised learning paths and gamification. Leadership programmes also help strengthen a positive leadership culture. In these programmes, managers acquire key leadership skills on the basis of practical experience. The skills provided include:

- Constructive communication
- Emotional intelligence
- Self-organisation
- Team orientation

#### **Employee satisfaction**

In 2023, a strategic Group People function was established, which ensures that employees are taken into account in the business model throughout the Group on the basis of the Group's corporate strategy and the People Strategy. This marked the start of a culture transformation. By pursuing a unified People operating model across all core markets, UNIQA promotes international cooperation, employee development and mobility, strengthening employee loyalty as a result. The new model involves rolling out lighthouse initiatives to improve employee experience. Guided by the defined employee journey, these initiatives address the main steps of the specific employee experience, starting from the recruitment and onboarding stages, to working and the learning experience, ending with leaving the company.

A strong corporate culture paves the way to achieving economic targets. Since 2022, more than 2,000 colleagues from 15 countries in which UNIQA operates have participated in activities on the topic of culture transformation across the Group. Dashboards with key performance indicators (KPIs) on employee structure, recruitment rates, turnover and contract types help managers monitor and manage personnel changes. Transparency on these topics likewise enhances employee loyalty, encourages career development and improves the working environment, all of which have a positive impact on the company's performance and employee satisfaction. Over 500 measures were derived from the employee survey and consequently rolled out. They are now subject to continuous reviews and refinement. In this way, employee feedback is directly incorporated into improvements to the work environment. These measures are designed to increase employee well-being in the long term and reduce the risk of personnel shortages at UNIQA.

Managing directors of service providers and companies in the healthcare sector are responsible for ensuring alignment with the UNIQA corporate strategy. At the PremiQaMed Group, roles have been established for a medical representative and a nursing representative as permanent members of the internal strategy teams.

## 3.6 TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES (\$1-5)

Target: Best employer for impact-driven employees

The company's target of becoming the best employer for impact-driven employees is enshrined in the UNIOA 3.0 strategy. The target also applies to the insurance companies and their branches along with IT service units in Austria, Southeastern Europe, Czechia, Slovakia, Hungary, Poland and Ukraine. Target attainment is measured on the basis of the EX (Employee Experience) index. By 2028, UNIOA aims to achieve a rating of 4.5 out of 5 stars. The reference value in the 2023 base year was 3.8 stars, with the EX Index figure reaching 4.0 stars in the financial year. The figure is calculated based on the eight stages of the employee journey: "I get hired", "I am onboarded", "I am working", "I am engaged", "I am learning", "I am achieving my targets", "I am changing roles" and "I am rewarded". These stages are evaluated as part of the employee surveys conducted twice each year.

As the "I am engaged" stage is considered to be of particular importance within the employee journey, it will no longer be included in the general index figure as of 2025 but instead covered as a separate metric named Engagement Index. The target for the Engagement Index is 4.5 out of 5 stars and is expected to be reached by 2028. The Supervisory Board and the Management Board determined the target of "Best employer for impact-driven employees" without involving the employees in the decisionmaking process or in identifying remedies and improvement measures. An ambitious target was set in order to provide clear guidance for improving employee satisfaction. The selected target rating is demanding yet realistic and takes the company's internal circumstances into account. In addition, the target also matches the customer satisfaction target, which is also 4.5 stars.

#### Target: Narrowing the adjusted gender pay gap

Set forth in the D&I strategy, the target of gender equality and equal pay for equal work entails narrowing the adjusted gender pay gap for employees at insurance companies and their branches in Austria, Poland, Hungary, Czechia, Romania and Slovakia. This target group will be gradually expanded from 2025 onwards. As part of this expansion, a medium-term objective will be defined in 2025 that includes the new sites – a short-term goal was therefore initially set for 2024.

The adjusted gender pay gap measures the average pay gap between men and women. Factors such as professional experience, qualifications and position are taken into account to provide a more accurate picture of the gender pay gap. Gender-based remuneration equality is determined using a regression analysis that considers salary as a dependent variable alongside various demographic, organisational and performance-related factors as independent variables. The adjusted gender pay gap results from the determined influence of the gender variable (male/female) on salary once all other factors have been checked.

In 2024, the adjusted gender pay gap came to 3.1 per cent. Compared with the set target of 3.2 per cent, this represents a drop below the target of 0.1 per cent.

Narrowing the adjusted gender pay gap	Baseline value and base year	Target value
Time horizon: short-term (2024)	4.0% in 2023	3.2%

The target value for the gender pay gap was determined based on the analysis of several scenarios and corresponds to a 20 per cent reduction, with a minimum value of 1 per cent. Further reductions below 1 per cent are not conducive, as natural staff turnover can lead to fluctuations and external certifications already result in a higher threshold of <5 per cent. Data was sourced from personnel data for 2023. The Supervisory Board and the Management Board determined the above target for the entire UNIQA Group without any employee engagement in the decision-making process or in identifying remedial and improvement measures.

## 3.7 CHARACTERISTICS OF UNIQA EMPLOYEES (S1-6)

While the Group notes to the Consolidated Financial Statements disclose the average number of full-time equivalents as a measure of head count, in accordance with ESRS the number of persons is reported without taking into account the extent of working time, which is why different figures are presented. The disclosures on the characteristics of employees in this document are based on the head count as of the reporting date 31 December 2024. Inactive employees are not accounted for in the disclosures. The specified metrics are not externally validated but are audited as part of internal checks and additionally verified through an external audit. Permanent employees refer to employees with whom contracts have been concluded for an indefinite period. By contrast, temporary employees refer to employees with whom employment contracts containing a specified contract termination date have been concluded. Non-guaranteed hours employees are employees who do not have any guaranteed working hours, guaranteed minimum hours or a specified number of working hours, in other words casual workers, workers on zero hours contracts, on-call workers and similar.

Employees by gender	Head count
Male	7,040
Female	9,354
Other	0
Not reported	0
Total	16,394

Employees by contract type	Female	Male	Other	Not disclosed	Total
Permanent employees	8,588	6,533	0	0	15,121
Temporary employees	546	410	0	0	956
Non-guaranteed hours employees	220	97	0	0	317
Total	9,354	7,040	0	0	16,394

The following tables show separately only those countries in which UNIQA employs at least 50 people and represents at least 10 per cent of the company's total workforce.

Employees by country	Head count
Austria	7,228
Poland	2,122
Other countries	7,044
Total number of employees	16,394

Company departures are defined as the total number of terminations of employment contracts that are not seam-lessly followed by the individual in question entering a new role within the same company. The number of company departures in the year is 3,028. The employee turnover rate is 18.5 per cent and is calculated as follows: number of departures in the reporting year divided by the number of employees as of the reporting date.

#### 3.8 COLLECTIVE BARGAINING COVERAGE AND SO-CIAL DIALOGUE (\$1-8)

UNIQA employees are covered by different collective bargaining agreements or local equivalents depending on their country, company and the classification of their employment relationship. In 2024, UNIQA Insurance Group AG and its fully consolidated subsidiaries did not have any worker representation at the European level (European Works Council, SE/SCE).

	Collective bargai	Collective bargaining coverage	
Coverage rate	EEA countries	EEA countries non-EEA countries	
00 - 19 %	Poland		
20 - 39 %			
40 - 59 %			
60 - 79 %			
80 - 100 %	Austria		Austria, Poland

### Percentage of employees covered by collective bargaining agreements by country

Austria	97.8
Poland	0.0
Total	58.1

## Employees represented by workers' representatives, only EEA countries

Austria	92.0
Poland	99.9
Total	88.1

#### 3.9 DIVERSITY METRICS (S1-9)

Top management comprises the following hierarchy levels: B-0 (individuals with Management Board roles within the UNIQA Group as well as management board members for individual countries and subsidiaries), B-1 (managers who directly report to the Management Board) and B-2 (managers who report to managers in hierarchy level B-1).

Top management by gender	Number	
Male	541	60.6
Female	352	39.4
Total	893	100.0

Employees by age	Head count	
Employees < 30 years old	2,647	16.15
Employees 30 - 50 years old	9,740	59.41
Employees > 50 years old	4,007	24.44

## 3.10 TRAINING AND SKILLS DEVELOPMENT METRICS (S1-13)

The average number of training hours is calculated by dividing the total number of training hours completed by the number of training hours completed and amounted to 31 in 2024 for actively employed employees. Both mandatory and voluntary training courses are taken into account.

In addition, UNIQA uses the phase-in for the KPI "Percentage of workers who have participated in regular performance and career assessments, broken down by gender" so that this information is provided at a later date.

Average number of training hours per employee by gender	Hours per employee
Male	20.59
Female	16.96
Total	18.52

#### 3.11 REMUNERATION METRICS (PAY GAP AND TO-TAL REMUNERATION) (S1-16)

The gender pay gap is defined as the difference between the average salary level of female and male employees, expressed as a percentage of the average salary level of male employees based on gross hourly earnings, including variable remuneration (bonuses, commissions, etc.), social benefits and other non-monetary benefits such as company cars, insurance policies and pension commitments. Reimbursements for travel expenses, employer contributions and expenses are not taken into account in the calculation. The gross annual salary

is divided by the number of hours worked by the employee in question in line with their employment contract in order to calculate their gross hourly pay. There is a distinction between adjusted and unadjusted gender pay gap. The unadjusted gender pay gap shows the average pay gap between men and women, without taking into account factors such as professional experience or position. The adjusted gender pay gap, by contrast, compares salaries under equal conditions and illustrates the difference in salaries between women and men in comparable work. Since the adjusted gender pay gap shows whether statistically unexplained pay gaps continue to exist for the same work, UNIQA has set itself the target of reducing this gap. The aim is to ensure equal pay for equal work and to address structural inequalities in a targeted way. Because ESRS reporting requires disclosure of the unadjusted gender pay gap, it is also published and amounts to 27.8 per cent in the financial year.

The total remuneration ratio is defined as the ratio of the annual total remuneration granted to UNIQA's highest-paid individual to the median annual total remuneration for all employees, including the members of the Management Board (excluding the highest-paid individual). Total remuneration is calculated in the same way as the gender pay gap and presented as a ratio, which came to 50.0 in the reporting year.

### 3.12 INCIDENTS, COMPLAINTS AND SEVERE HUMAN RIGHTS IMPACTS (\$1-17)

Incidents of discrimination or harassment on the grounds of gender, racial or ethnic origin, nationality, religion or belief, disability, age, sexual orientation and other grounds are considered complaints.

Incidents of discrimination	Disclosed
Total number of incidents of discrimination, including	
harassment, reported in the reporting period	6
Number of complaints filed through channels for people in the	
UNIQA workforce to raise concerns (including grievance	
mechanisms)	13
Number of incidents reported to the National Contact Points for	
OECD Multinational Enterprises	0
The total amount (in €) of fines, penalties, and compensation for	
damages as a result of the incidents and complaints disclosed	
above	0.00

No incidents occurred in the financial year, resulting in no fines being imposed in relation to workers' human rights.

### 4. Workers in the value chain (ESRS S2)

## 4.1 MATERIAL IMPACTS, RISKS AND OPPORTUNITIES AND THEIR INTERACTION WITH STRATEGY AND BUSINESS MODEL (ESRS 2 SBM-3)

The workforce of business partners play a key role in UNIQA's value chain. Internationally recognised standards are applied to ensure that the key interests of relevant stakeholders are taken into account even when there is no direct interaction between UNIQA and workers in the value chain. The materiality assessment identified workers along the value chain from the following areas that may be subject to material impacts from UNIQA's operations:

- Suppliers: The selection of suppliers can indirectly affect workers' working conditions. From 2025 onwards, the selection and annual evaluation of suppliers will be geared towards preventing violations of labour law. In the future, the Corporate Sustainability Due Diligence Directive (CSDD) will address this topic.
- Corporate customers: The insurance coverage offered indirectly affects the business activities and working conditions of corporate customers' workers. Failing to adequately implement measures when reviewing the acceptance of corporate customers and as part of their ongoing assessment provides little incentive for corporate customers to improve working conditions for their employees.

General risks that affect every type of company are reviewed as part of the supplier evaluation. UNIQA suppliers and insurance customers primarily operate in sectors in which UNIQA is also active. No incidents related to these risks were identified in the financial year. No negative impacts specifically associated with the business model or arising from specific incidents as a result of UNIQA's business activities were identified. It was also not possible to limit any potential negative impacts to workers with specific characteristics. No serious issues or incidents related to human rights were identified within the value chain in the financial year.

Since 2020, UNIQA has been a member of the UN Global Compact, the principles of which are enshrined in the UNIQA Code of Conduct which applies to all employees. Suppliers are also expected to uphold the principles of the UNIQA Code of Conduct and to act accordingly. This ensures that the interests of the affected stakeholder groups are taken into account. The UNIQA Code of Conduct contains the material social and ecological criteria of the UN Global Compact. It addresses numerous topics, including ethical and legally compliant governance; conduct towards customers, suppliers, employees and other stakeholders; payment in kind (gifts, donations, etc.); the management of real estate and confidential information; competitive conduct; conflicts of interest; environmental and social sustainability, such as human rights (forced and child labour); labour standards, environmental protection and anti-corruption; and general rules of communication.

Occupational safety, precarious employment and human trafficking are not covered because they have not been identified as material risks in UNIQA's normal course of business.

The corporate strategy is also aligned with the internationally recognised provisions of the UN Universal Declaration of Human Rights. This not only ensures compliance but also contributes to stable and sustainable business relationships in the long term.

## **4.2 POLICIES RELATED TO VALUE CHAIN WORKERS** (S2-1)

#### 4.2.1 Workforce of suppliers

UNIQA's business model is based on the integration of sustainability principles throughout the value chain. Suppliers are selected not only on the basis of economic factors, but also on the basis of social and environmental factors depending on the product group in question.

The Group Procurement Policy adopted by the Management Board provides the framework for procurement procedures. Along with other aspects, the policy stipulates that suppliers with which a defined order value has been agreed must complete a survey containing specific questions on the topics of human trafficking, forced labour and child labour. The survey is based on the German Supply Chain Act and covers roughly 50 aspects of the following categories:

- Risk analysis
- Measures and control mechanisms
- Prevention and remedies
- Grievance mechanisms
- Reporting and transparency

In the financial year, UNIQA sent out this survey and collected the relevant data for the first time. Each year, the data will be updated, reviewed and used to ensure that suppliers meet UNIQA's compliance requirements in the long term. From 2025 onwards, the human rights survey will become part of the ongoing supplier evaluation process and serve as the basis for discussions with suppliers. Responsibility for the Group Procurement Policy lies with the Management Board member for Operations, Data & IT.

#### 4.2.2 Workforce of corporate customers

In the corporate customer segment, the UNIQA Sustainability Strategy in Corporate Business and the ESG Underwriting Standard ensure that corporate customers are evaluated in terms of ESG risks as part of the underwriting process. The corresponding risk assessment is carried out by an external data provider on the basis of the Principles for Sustainable Insurance (PSI) in order to manage ESG risks in the non-life insurance business. With regard to social matters, in addition to issues such as child labour, human trafficking and forced labour, aspects such as poor working conditions and violations of workers' rights are also taken into account. The UNIQA Sustainability Strategy in Corporate Business and the ESG Underwriting Standard are the responsibility of the Customers & Markets Austria and Customers & Markets International Management Board function.

Insurance products in the property, liability and transport insurance business lines and in the financial lines of the industrial customer segment are subject to the risk assessment covering ESG topics. As the PSI guidelines exclude

certain sectors from ESG risk exposures, around 50 per cent of the company's portfolio is currently subject to an ESG risk assessment. When defining the strategy, the interests of stakeholders are indirectly accounted for through the application of the PSI guidelines on the basis of their interests. There is no corresponding engagement with the workforce in this regard. The UNIQA Sustainability Strategy is available to view on UNIQA's intranet.

## 4.3 PROCESSES FOR ENGAGING WITH VALUE CHAIN WORKERS ABOUT IMPACTS (S2-2)

Beyond the processes described above, UNIQA does not have a general procedure in place for engaging with workers in the value chain.

## 4.4 PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR VALUE CHAIN WORKERS TO RAISE CONCERNS (\$2-3)

Appropriate measures are taken in the event of negative incidents or violations of guiding principles by suppliers. These measures may include contract terminations or blacklisting. If either of the above scenarios are found to have occurred, business relationships are not entered into with the suppliers in question. There were no such recorded incidents in the financial year. The human rights survey is used to identify potential risks at an early stage and to take preventive measures. A detailed strategy on how to treat specific risks in the related sector along with related risk mitigation measures will only be developed once the full portfolio analysis planned for 2025 is complete.

Business partners can raise their concerns or complaints on the whistleblowing platform. There are no specific channels available to the workforce of suppliers or corporate customers. Please consult the chapter "Sustainability in UNIQA's governance (ESRS G1)" for more information.

# 4.5 TAKING ACTION ON MATERIAL IMPACTS ON VALUE CHAIN WORKERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO VALUE CHAIN WORKERS, AND EFFECTIVENESS OF THOSE ACTIONS (S2-4)

Supplemental agreements will be concluded with suppliers that fall under the scope of the implementation of the Digital Operational Resilience Act (DORA). These agreements cover aspects such as environmental protection and safety, labour policies and business ethics, among other topics. Only suppliers from the information and communication technology (ICT) sector fall under the scope of DORA. For the first time, affected suppliers were identified on the basis of IT applications and services in the 2024 financial year as part of a business impact analysis, which will be conducted annually starting in 2025. The relevant contracts and suppliers were identified for this purpose. The UNIQA Supplier Commitment Letter forms part of the supplementary agreements. It contains the key aspects of the Code of Conduct and requires suppliers to take action to reduce their environmental impacts, guarantee labour rights and comply with ethical business practices. The commitments also include regularly reporting on sustainability metrics, adhering to environmental and safety standards, and ensuring fair working conditions. In the financial year, commitment letters were signed by 38 per cent of suppliers.

From 2025 onwards, the effectiveness of these measures will be monitored on an annual basis by analysing the human rights surveys and by engaging in a dialogue with suppliers within the scope of supplier engagement. In the event of deviations from the standards, measures such as those described in section 4.4 are taken.

It is only possible to demand action be taken by corporate customers to a limited extent as the business activities pri-

marily focus on assuming and assessing risk, not on exerting direct operational influence. Measures are therefore currently mainly addressed in the approval process. From 2025 onwards, this will also be the case for automatic contract renewals.

In the 2024 financial year, an analysis of the customers with the highest premium volumes in the European markets was conducted. The aim of the analysis was to assess these customers in terms of their social and governance risks. Companies with the highest potential exposure to these risks were screened for critical incidents in the media. No reports of critical incidents related to human rights were identified.

## 4.6 TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES (\$2-5)

Findings from the human rights surveys are used to produce specific targets and metrics for managing and evaluating supplier relationships. The results of the first evaluation are expected to be available in the 2025 financial year. UNIQA's business activities have a negligible sustainability impact within its value chain. Nevertheless, targets have been set to further minimise these impacts. On the one hand, the targets include increasing supplier transparency by analysing and evaluating the human rights surveys from 2025 onwards. On the other hand, targeted measures will be developed on this basis to reduce potential risks in the supply chain as of 2025.

A comprehensive framework containing specific targets and metrics will be defined by the end of 2025 in order to evaluate and improve ESG performance in the corporate customer business.

### 5. Consumers and end-users (ESRS S4)

## 5.1 MATERIAL IMPACTS, RISKS AND OPPORTUNITIES AND THEIR INTERACTION WITH STRATEGY AND BUSINESS MODEL (ESRS 2 SBM-3)

As a core business activity, the provision of insurance benefits may result in certain impacts, particularly on policyholders.

UNIQA is committed to the ten principles of the UN Global Compact, which include respect for human rights. In terms of customers, this commitment is reflected on the one hand in UNIQA's compliance with minimum social standards in UNIQA's corporate business with corporate customers (see chapter 4). On the other hand, the ESG Retail Strategy for Austria described in the following and the corresponding processes and actions ensure human rights are upheld in transactions with retail customers. Along with topics such as equal treatment and anti-discrimination, matters such as the right to data protection, the right to freedom of expression and information, the right to access essential services and the right to a fair trial with respect to the responsible handling of complaints are also relevant. No human rights violations in relation to consumers and end-users were reported for the financial year. As the various strategies (retail business, data protection and cybersecurity) have a pronounced customer-centric approach, no known impacts on consumers and/or endusers arise from or are associated with the business strategy.

#### 5.1.1 Retail business

Insurance products offered by UNIQA are aligned to the greatest possible extent with customer requirements. As a result, the extent of insurance coverage varies from policy to policy. In certain cases, a violation of legal disclosure requirements in relation to the conclusion of insurance products or insurance-based investment products as well as incorrectly assessing customer requirements can lead to erroneous and unfavourable decisions on behalf of customers. The provision of incorrect advice represents a legal risk as it may result in insurance claims being asserted by the affected customers.

Negative impacts on consumers can also occur in individual cases where certain groups of people do not have access to customised insurance products or insurance-based investment products and are therefore denied necessary insurance or financial coverage. Conducted in close cooperation with the specialist departments on the basis of internal knowledge and technical expertise, the materiality assessment identified the relevant disadvantaged groups. Negative impacts concern people who may not be able to afford insurance coverage due to their financial situation and other groups. Potential barriers to access posed by the (complex) language used in policies could exclude migrants, people with mental illness and the elderly, while people with physical disabilities or pre-existing medical conditions are occasionally excluded from insurance products, such as health insurance.

#### 5.1.2 Data protection

As an insurance company, UNIQA processes a large volume of data due to the nature of the business. Accordingly, data protection and all associated processes play a particularly important role at UNIQA. Failing to roll out internal processes and infrastructure for data protection and information security can result in the risk of data subjects' rights being adversely affected, especially if data becomes accessible to third parties – something that can negatively impact both employees and customers. For UNIQA, data protection violations can result in a financial risk in the form of fines.

#### 5.1.3 Cybersecurity

A lack of internal processes and adequate cybersecurity infrastructure could potentially result in a loss of customer data, which can negatively impact customers. In response, the digitalisation of business processes is guaranteed through comprehensive measures to minimise cyber risk and increase cybersecurity.

#### 5.2 POLICIES RELATED TO CONSUMERS AND END-USERS (S4-1)

#### 5.2.1 Retail business

In the financial year, UNIQA developed an ESG Retail Strategy for its main market, Austria, which takes the outlined impacts and risks into account. Responsibility for the ESG Retail Strategy lies with the Customers & Markets Austria Management Board function.

In the Group Product Development Process Policy, which also falls under the responsibility of the Customers & Markets Austria Management Board function, the target market for each insurance product on the market is defined in accordance with the legal requirements. A description of the suitable customer group is also provided in the policy to permit targeted product sales. The target market definitions are based on certain criteria, including the customer category (consumer, business operator), shared characteristics, desires, objectives and needs, including the consideration of sustainability objectives. For insurance-based investment products, specific criteria such as risk and loss-bearing capacity are also taken into account. The target market is defined and approved by a dedicated committee established for this purpose as part of the product development process.

Diversity and inclusion are also important elements of the ESG Retail Strategy. Special attention is given to increasing the accessibility of products. Individual solutions are developed and offered as required in order to include socially disadvantaged groups and reduce social inequality.

The scope of the ESG Retail Strategy in Austria is clearly defined. The policy focuses on the product development process in the property insurance, liability, accident and motor vehicle business lines and includes customers affected by the impacts and risks identified for these areas. With the establishment of mandatory, clear guidelines for the product development process throughout the Group, the scope of the Group Product Development Process Policy has also been clearly defined.

Retail strategies specific to ESG are yet to be established in the other countries in which UNIQA operates. At present, the measures in place are limited to fulfilling minimum statutory and internal requirements, such as the application of the Product Development Process Policy.

#### 5.2.2 Data protection

The protection of personal data – a fundamental right that concerns the privacy of customers and employees alike – is a matter of particular importance to UNIQA. Considering this, processes and guidelines have been established to ensure that the requirements of employees and customers are met. Related measures are exclusively taken in compliance with national and international frameworks and regulations. A separate dialogue is not maintained with customers in this regard.

The Group-wide Data Protection Management Policy sets out the core functions of the data protection management system. A separate Data Protection Management Standard governs the allocations of tasks, including the assignment of specific data protection tasks and responsibilities to different organisational units.

Clear rules lay down the responsibilities in relation to data protection for individual business processes within the various functional areas. In principle, the division of responsibilities follows the three lines of defence principle. The management of each Group company is responsible for compliance with all data protection requirements and receives assistance from the Group's data protection organisation, which includes the respective data protection officers and data protection coordinators. The Group-wide requirements as well as the plans and tools required for their implementation are defined by the Group Data Protection Officer, who also monitors compliance with all requirements. The data protection officers at the individual Group companies continuously monitor data protection processes and measures. This procedure applies to both internal processes and processes related to corporate customers.

A variety of regulations govern the structure of business processes and the handling of personal data, including the EU General Data Protection Regulation (GDPR), the EU Regulation on Artificial Intelligence (AI Act) and the UN Global Compact. The criteria outlined in these frameworks provide the basis for regulating the handling of personal data in business processes. The latest interpretations and rulings of European and national courts as well as the guiding principles and regulations of the European and national supervisory authorities are also taken into account.

#### 5.2.3 Cybersecurity

A comprehensive cybersecurity policy not only ensures a timely response in the event of an emergency, but it also helps to build trust among customers and promotes the development of innovative and secure digital solutions. It safeguards sensitive personal information, such as health and financial data, against cyber-attacks and ensures that digital services, including health apps and online insurance services, can be securely used. The UNIQA Group Cybersecurity Strategy was developed and implemented across the Group for this purpose. Responsibility for this strategy lies with the Management Board member responsible for Operations, Data & IT.

The Group Cybersecurity Strategy is based on several pillars, which include proactive measures to prevent and protect against cyber-attacks. In order to ensure business continuity, a comprehensive crisis management framework that covers strategic communication as well as structured decision-making has also been established.

5.3 PROCESSES FOR ENGAGING WITH CONSUMERS AND END-USERS ABOUT IMPACTS (S4-2) AND PROCESSES TO REMEDIATE NEGATIVE IMPACTS AND CHANNELS FOR CONSUMERS AND END-US-ERS TO RAISE CONCERNS (S4-3)

#### 5.3.1 Retail business

Customers can express their opinions and provide feedback in a variety of ways. Several different approaches have been established for incorporating customers' views into decision-making processes and measuring their satisfaction on an ongoing basis. A number of processes have been put in place to review the effectiveness of these approaches and to reduce any resulting negative impacts. Customers are informed about the available feedback mechanisms and channels through email invitations to participate in surveys, which they will receive if they have opted in to marketing, or through prompts to submit feedback on their preferred channel. One of these prompts includes the submission of a standard rating based on a fivestar scale, which can be supplemented by free text fields. These free-text comments are analysed using AI technologies to identify topic-based clusters and simplify the subsequent analysis. Such surveys are carried out automatically, especially after new contracts have been concluded, after claims for damages or entitlements have been paid out or rejected, or following contact with an individual customer at a UNIQA location or with customer service. Using a scale of 1-5, with 1 being "not sufficient" and 5 being "very good", customers can indicate whether they are willing to participate in an individual telephone interview. Findings from the customer feedback obtained are then incorporated into the product development. The customer complaints process is governed by a Complaints Management Policy. The policy ensures that virtually every time a customer interacts with UNIQA, they are given ample opportunity to provide feedback and gain additional trust. In general, great importance is attached to careful handling of feedback received. Aside from these structured feedback avenues, detailed interviews with customers who have volunteered to participate are conducted on a regular basis to gain comprehensive insights on a wider scale.

Market research also plays an important role in product development processes, regardless of whether they involve changes to existing products or designing new products. Customer segmentation is similarly based on the continuous evaluation of market research data. Information is generally collected anonymously and does not follow a specified timetable. Market research on sustainability issues with regard to health insurance, motor vehicle insurance and household insurance products was carried out in the financial year. In addition to the insights gained from these findings, the results of the customer surveys are also incorporated into the product development process. The Product Experience department is responsible for implementing the findings, while responsibility for engaging with customers lies with the Management Board members for the Customer & Market Austria and Customer & Market International departments.

#### 5.3.2 Data protection

Data subject rights under data protection legislation constitute core elements of the GDPR and permit data subjects to maintain control over their data. Corresponding processes have been defined and introduced to ensure data subjects' rights are reliably upheld and observed for the duration of the statutory retention periods. One of the most important measures was the creation of a single point of contact with a dedicated e-mail address to which enquiries regarding data subject rights in relation to data protection can be sent. All customers are informed about this central point of contact in the privacy notices they receive at the time their data is collected for each data processing operation. Depending on the type of data processing and the form in which they communicate, customers may receive these privacy notices in paper form, in the app, through various other electronic channels or on the website. The central point of contact ensures that all incoming enquiries are documented, efficiently processed and reliably handled by the legally prescribed deadlines. If the enquiries received reveal systematic shortcomings in the data protection concept, measures are developed, and the Data Protection Management Policy is updated. An electronic complaints management system that complies with data protection legislation has been set up to ensure standardised handling of customer concerns, requests and complaints along with demands made under data protection legislation. Customers can report potential compliance or legal violations through various channels (including anonymous channels. The Compliance team, which can be contacted by e-mail, post or in person, and the UNIQA Whistleblowing Platform are available for this

purpose (see also chapter 6). Information on the complaints management system can also be found on the UNIQA website.

In order to ensure comprehensive follow-up and transparent processing, enquiries regarding data subject rights are recorded and documented by the data protection team. Every case of a suspected violation is carefully evaluated and the potential impacts on existing processes analysed. In accordance with the GDPR, risks affecting the rights and freedoms of natural persons are reported in due time to the data protection authority and, where applicable, to the affected customers and employees. At the same time, measures are being taken to eliminate the risk and prevent future incidents. The measures taken include, in particular, updating the data protection management system and the data protection requirements in ongoing data protection advisory processes on the basis of findings from the case in question. With this remedial approach, it can be ensured that the measures are effective and adhered to in the long term. Regular reports and expert panels provide information to all top management levels and to experts (Management Board, Supervisory Board, management, data protection coordinators) on specific data protection incidents and the measures taken. Raising awareness of the measures taken and exchanges with the specialist departments also help to ensure the effectiveness of the measures. The management of each individual Group company is responsible for compliance with data protection regulations. The data protection organisation provides the support required to ensure that data protection is properly implemented.

Customers and employees receive comprehensive and transparent information on the processing of their data and have the right to obtain information about their data stored by UNIQA and to request the rectification or erasure thereof at any time.

#### 5.3.3 Cybersecurity

Customer requirements in terms of data protection are met through a combination of seamless compliance with ongoing improvements of protective measures. Due to the complexity of the topic, an active dialogue is not maintained with customers on the subject of cybersecurity. The alignment of the cybersecurity policy with legal and regulatory requirements such as the GDPR or the European Union's Digital Operational Resilience Act (DORA) ensures that stakeholders are afforded comprehensive protection. Please consult section 5.5.2 to learn more about

the transparency and processing of customer data, including with respect to the development and implementation of remedial measures.

5.4 TAKING ACTION ON MATERIAL IMPACTS ON CONSUMERS AND END-USERS, AND APPROACHES TO MANAGING MATERIAL RISKS AND PURSUING MATERIAL OPPORTUNITIES RELATED TO CONSUMERS AND END-USERS, AND EFFECTIVENESS OF THOSE ACTIONS (S4-4)

#### 5.4.1 Retail business

A key focus of the ESG Retail Strategy is on promoting comprehensive sustainability awareness among advisors. The aim behind this is to expand their expertise on the topic of sustainability and ensure that they are able to incorporate this knowledge into their conversations with customers in a targeted manner. In the financial year, an ESG Check was rolled out in Austria as an integral part of the product development process. In addition to environmental criteria, this check also incorporates social criteria such as promoting equal opportunity and inclusion (for more information see section 2.5). Dedicated training on the ESG guideline and ESG Check also helps product managers integrate ESG aspects directly into product development.

In the financial year, various IT tools were introduced for the advisory process in Austria to ensure that advisers receive ESG-related support when documenting the requests and requirements of their customers during consultations.

In order to address the social aspects of the ESG Retail Strategy, work is also taking place to improve the accessibility of products. In Austria, for example, pilot projects related to online customer service were carried out in the financial year. A team set up for this purpose handles consultation appointments that customers can independently book on the website. As a result, consultations are available from any location. Customers can also choose from several different languages. Documents such as contracts and informational material have been written and tested in simple language to make them easier for customers to understand.

In the 2024 financial year, a comprehensive process was implemented in Austria to regularly assess all products on

the market. As a result, targeted checks can now be conducted to determine whether products are being sold successfully in the defined target market or whether new framework conditions have necessitated product updates. These criteria are reviewed on the basis of the evaluation of any customer complaints received, a survey conducted among sales employees on the target market definitions and an analysis of key actuarial metrics. For life insurance products, a quantitative and qualitative product assessment is also carried out to ensure that the products in question continue to create added value for customers. In addition, regular information exchanges take place with various advocacy groups.

In the other markets in which UNIQA operates, specific plans and measures are being developed to reduce negative impacts for consumers and end-users and to improve access to products. In addition, various new training formats such as sustainability training for sales employees will be launched in 2025.

#### 5.4.2 Data protection

Comprehensive risk management in compliance with data protection legislation ensures that potential data protection risks are identified at an early stage through risk analyses to permit targeted action to be taken to minimise risk. At UNIQA, data protection is integrated into various management systems, both in terms of operations and strategy. The data protection management system (DPMS) is closely linked to the risk management system and the compliance management system.

One key component of the data protection management system is the provision of comprehensive advice on data protection legislation by the Data Protection department. All employees across the Group can access this advice. Consulting with the Data Protection department is also mandatory for new initiatives and projects related to data protection as part of a standardised process. This procedure ensures that business practices comply with regulatory requirements and do not result in any negative privacy-related impacts for data subjects. The data protection management system also involves a continuous improvement process that culminates in a regular review of data protection regulations and the Data Protection Guideline. In addition, as part of the reactive measures, in its capacity as the second line of defence, the Data Protection department reviews the data breach process and determines whether it is effective and working in the interests of data

subjects with regard to content, timing and actions taken. In addition, remedial action may be taken on the basis of case-by-case assessments in the event of data breaches. Corresponding actions may include the deletion of data, the blocking of devices, password changes and training specific to certain target groups. When UNIQA takes these actions, the affected customers are informed accordingly if their active participation is required. Preventive measures such as implementing technical and organisational precautions, establishing privacy by design and privacy by default principles, authorisation policies, emergency plans and regular security reviews also help to prevent data breaches.

Regular training on the fundamental aspects of data protection and how to handle personal data ensures that all employees are kept up to date on the latest data protection requirements and know how to implement them in their daily work. This reduces the risk of data breaches and increases overall data security within the company. Data protection training is mandatory for all employees and takes place every two years as well as during the onboarding process. Various guidance documents were prepared in the 2024 financial year for the individual specialist departments to provide assistance with the implementation of data protection. For instance, the documents contain instructions on how to use cookies in line with data protection regulations and provide guidance on managing the distribution of roles under data protection legislation. Furthermore, the topic of data protection was more optimally and comprehensively integrated with regard to the use of AI in the consulting process in the financial year. An expanded process for evaluating and monitoring service providers used by UNIQA was also introduced to enable their compliance with data protection legislation to likewise be assessed.

#### 5.4.3 Cybersecurity

For more information on how potential negative impacts for customers that could arise as a result of a cyber incident are handled and related remedial actions, please refer to the procedure outlined in section 5.5.2. Related measures include regular security updates, threat assessments, security policies and the use of state-of-the-art technologies such as firewalls, intrusion detection systems and encryption. Sophisticated tools are used to identify and monitor unusual activity and threats early on. Employees receive training on cybersecurity each year and during their onboarding. They also participate in awareness programmes that help to raise the associated risk awareness. These programmes are updated to cover the latest threats and types of attacks and – depending on the target group - include both theoretical knowledge and practical exercises such as crisis simulations.

The Cybersecurity Action Plan, which is based on the Cybersecurity Strategy, entails a combination of technical, organisational and personnel measures. With regard to technical measures, the primary focus in the financial year was on strengthening network security, automated threat identification, data backups and restoration plans. Organisational measures include the risk assessment, risk management and the incident response plan. Personnel measures encompass training and raising awareness, the recruitment of experts and specialists, and addressing the corporate culture, in particular general handling of the topic of cybersecurity.

A comprehensive resilience management system that combines several approaches to security and crisis management has been introduced to strengthen resilience to cyber threats. Business Continuity Management (BCM) ensures critical business processes continue uninterrupted on the basis of defined plans and processes both during and after an incident.

IT Service Continuity Management (ITSCM) involves the establishment of disaster recovery plans and the regular review of IT risks. In the event of a security breach, an incident response team takes action to minimise the damage and ensure timely system recovery on the basis of clearly defined processes for identifying, mitigating, remediating and analysing security breaches. The plans and measures for managing acute emergency scenarios that jeopardise business operations are enshrined in the emergency management approach along with the coordination of internal and external resources.

In 2025, the focus will be on implementing additional measures, in particular on making the necessary updates to the DPMS to fulfil regulatory requirements in relation to AI and to ensure that the provisions of data protection legislation and data security principles are guaranteed when using innovative technologies. UNIQA's task is to develop and implement specific measures for achieving the defined targets. Monitoring progress on an ongoing basis and updating the action plan where necessary will make a substantial contribution to achieving the defined targets.

## 5.5 TARGETS RELATED TO MANAGING MATERIAL NEGATIVE IMPACTS, ADVANCING POSITIVE IMPACTS, AND MANAGING MATERIAL RISKS AND OPPORTUNITIES (S4-5)

#### 5.5.1 Retail business

Formulation of quantitative targets and defining metrics to help UNIQA manage and leverage the identified impacts, risks and opportunities is currently in progress. The goal over the next few years is to establish a quantitative basis for all UNIQA markets. A corresponding monitoring process can only be set up in the course of establishing quantitative targets.

#### 5.5.2 Data protection

In order to meet regulatory requirements arising in particular from the EU Digital Strategy, it will be necessary, among other things, to adopt a holistic approach to data protection and to further develop the Governance Framework for Data Governance. A data protection action plan sets annual targets for mitigating material risks related to the processing of personal data of employees and customers and for taking appropriate action. For 2025, these targets primarily relate to the measures and legal requirements listed above. Due to the complexity of the topic and the absence of specific targets, no further quantitative or time-sensitive targets can be stated in this regard.

#### 5.5.3 Cybersecurity

In the future, UNIQA will continue to expand its cybersecurity strategy in compliance with regulatory requirements in order to strengthen and guarantee its cyber resilience. This will be achieved in particular through the implementation of the described measures. For example, in 2025, the requirements of the EU Digital Operational Resilience Act (DORA) will be rolled out which, together with the implementation of third-party security risk management and measures to manage security risks, will ensure that consistent standards are upheld and contribute to the fulfilment of third-party security requirements.

The measures in place are continuously reviewed and updated in order to minimise any security risks identified. This procedure also ensures elimination of any vulnerabilities, data integrity, confidentiality and system availability. In addition, regular audits and tests are conducted to strengthen resilience against cyber threats on an ongoing basis.

### 6. Business conduct (ESRS G1)

## 6.1 BUSINESS CONDUCT POLICIES AND CORPORATE CULTURE (G1-1) AND PREVENTION AND DETECTION OF CORRUPTION AND BRIBERY (G1-3)

Based on the guiding principles of "customer first", "simplicity", "integrity", "responsibility" and "community", the corporate strategy needs to be reflected in the corporate culture by the values it proclaims being established as fixed elements of the daily work performed by employees.

A corporate culture that is neither practised nor clearly or sufficiently communicated to employees can hinder employee development and significantly impair their performance in their daily work.

## **6.1.1 Internal policies and the EU Whistleblowing Directive**

UNIQA's corporate culture and the associated guiding principles are set out in the Code of Conduct. The Code establishes internal standards for ethical conduct that go beyond the applicable legal requirements and are binding for employees, and are the basis for relationships with customers, investors and other public bodies. The Code of Conduct has been adopted by the Management Board and communicated to all employees to whom it applies. Policies regarding business integrity and ethical principles are outlined in the Code on the basis of the UNIOA guiding principles. In addition, the Code also focuses on social and environmental aspects, such as etiquette, human rights and labour standards, and environmental protection. The Code of Conduct, the contents of which form part of the annual mandatory compliance training for employees, is publicly available online. Employee surveys and information sessions for employees permit UNIQA to evaluate its corporate culture.

Both the Group Compliance Policy and the Group Compliance Standard describe how the compliance functions are organised and contain regulations on key compliance topics, such as preventing corruption and handing reports of non-compliance. While the Group Compliance Policy applies without limitation to all fully consolidated companies, the Group Compliance Standard applies entirely to

all (re)insurance companies. Certain sections of the Standard apply to branches and non-(re)insurance companies of material importance to UNIQA. Austria ratified the UN Convention against Corruption (UNCAC) in 2006. The Group Compliance Policy governs compliance with the provisions applicable in Austria and requires employees as well as the members of the Management Board and Supervisory Board to comply with the laws and internal regulations on preventing corruption. The UIG Compliance function established at the UNIQA Insurance Group level is responsible for preparing all regulations and introducing training opportunities for employees such as compliance conferences, compliance lectures or compliance presentations.

In 2023, Austria transposed the EU Whistleblowing Directive 2019/1937/EU into national law. Accordingly, UNIQA Insurance Group AG, in its capacity as a holding company, local (re)insurance companies and non-insurance companies that fall within the legal scope of the directive are required to establish internal whistleblowing reporting channels.

A failure to establish adequate safeguards for whistleblowers can deter them from reporting important information and result in negative impacts. A failure to consistently pursue reports of bribery and corruption can negatively impact the corporate culture and employee views on UNIQA's integrity. In light of this, UNIQA set up a whistleblower portal back in 2018 where violations can be reported. (Re)insurance companies and non-insurance companies that fall within the scope of the EU Whistleblowing Directive either handle cases independently through their local compliance functions or through a defined independent body. Group Compliance is the central point of contact for non-insurance companies and for companies that have signed the Whistleblowing Service Agreement. Along with UNIQA employees, third parties may also submit reports of suspected non-compliance. Reports can be sent to the UIG Compliance function or local compliance functions on the portal, by post, by email or in person to a specified independent body, as well as to non-insurance companies that fall within the scope of the EU Whistleblowing Directive. Whistleblowers can report their suspicions by providing their details or, where local law permits, by submitting an anonymous report on the portal.

Once they have received a report, the whistleblowing officers acknowledge receipt of the report and review the case while maintaining the whistleblower's anonymity and ensuring confidentiality. The whistleblower will receive feedback on the status of the case or find out whether it has been concluded within three months.

If allegations are made against an individual who works for UNIQA, the employees in question must be informed of the ongoing investigation, provided that the anonymity of the whistleblower is respected, and the investigation is not jeopardised as a result. The tasks of employees who handle reports of non-compliance are clearly separated from the responsibilities of the persons involved in the matter. In the event that allegations are made against employees, the People department (UNIQA HR) and the Works Council are notified in accordance with the Whistleblowing Works Agreement. Reports are handled in compliance with the dual control principle, whereby individuals against whom the report has been submitted are not permitted to handle the report in question. Whistleblowers enjoy legal protection if they have legitimate reason to believe that the information they reported was true at the time it was reported and that it falls under the scope of the law. In other words, it suffices if they believe the information they reported is correct. Employees are protected against any retaliation and the threat of retaliation arising from a report. The Whistleblowing Directive outlines examples of retaliation, including in particular:

- Suspension, termination of employment contracts or similar measures
- Demotions or being denied a promotion
- Reassignment to other tasks, change of place of work, salary reduction, change in working hours
- Not permitted to participate in training
- Negative performance assessment or issuance of a bad reference
- Disciplinary measures, complaints or other penalties, including financial penalties

In its capacity as an employer, UNIQA acknowledges that any unlawful retaliation against employees can have consequences under the Whistleblower Protection Act. The members of the Management Board and the Supervisory Board as well as the members of the Audit Committee receive an annual compliance report on the number, status and, if applicable, the results of investigations into individual reports. The reports in question may also involve topics such as corruption or bribery.

In order to prevent corruption, UNIQA has defined reporting and approval requirements to regulate payments in kind. Payments in kind, namely donations, sponsorships, gifts and invitations received and issued by employees are documented in the perquisite database, and reviewed and approved by Compliance, as necessary. The perquisite database is based on the Group Compliance Policy, the Group Compliance Standard and the Code of Conduct.

#### 6.1.2 Identification and assessment of risks

Within UNIQA, certain functions are considered particularly vulnerable to corruption and bribery. At (re)insurance companies, these at-risk functions are identified by the local compliance function, whereas at non-(re)insurance companies and branches they are identified by the persons responsible for compliance-related topics. The following at-risk functions and employees have been identified for the (re)insurance companies:

- Members of the Management Board and members of the Supervisory Board and the related Supervisory Board committees
- Employees of the following departments:
- Procurement
- Sales
- Underwriting
- Claims Management
- Money Laundering Prevention and Sanctions
- Employees of the following governance functions pursuant to the Group Governance Policy:
- Compliance
- Actuarial Services
- Internal Audit
- Risk Management
- Employees with the following key functions pursuant to the Group Governance Policy:
- Financial and real estate management
- Reinsurance

In non-(re)insurance companies and branches, which primarily comprise real estate companies, service companies and pension and investment funds, the functions-at-risk vary depending on the business model and internal structures. In any case, the at-risk departments and functions at these companies include management and key management functions. Along with the functions identified for (re)insurance companies, real estate management and property development at the real estate companies and investment management at the pension funds were classified as functions-at-risk.

#### 6.1.3 Training

Compliance risks, such as corruption and bribery, can result in significant economic and legal repercussions. These risks can be further exacerbated by the inadequate provision of sufficient information and training to employees.

Every year, all members of the Management Board and the Supervisory Board as well as employees receive mandatory training on preventing corruption and bribery. The training covers the following topics:

- Anti-corruption, including the definition of corruption and bribery
- Ethical conduct guidelines
- Donations and sponsorships
- Acceptance of benefits and how to properly report them
- Whistleblowing processes, including the reporting and investigation of violations
- Handling conflicts of interest

These training courses can be held in-person, as webinars or as e-learning courses. New employees are required to complete at least one hour of mandatory training on preventing corruption and bribery within the first three months of their employment relationship. The aim is to achieve comprehensive awareness of ethical conduct and legal requirements, and to ensure compliance with the relevant standards. Furthermore, compliance functions and employees of compliance departments must participate in external training at least once a year.

Anti-corruption training	At-risk functions	AMSB <sup>1)</sup>
completed		
Training coverage		
Total (according to head count)	6,030	22
Total number of employees who received training	4,808	20
Percentage of employees who received training	80 %	91%
Delivery method and duration (duration in hours)		
Classroom training	20 min –1 hour	20 min
Computer-based training	20 min –1 hour	20 min
Frequency		
How often training is required	Annually	Annually
Topics covered		
Definition of corruption	Yes	Yes
Policies	Yes	Yes
Donations, sponsorships, small impersonal gifts and reporting	Yes	Yes
Whistleblowing and reporting	Yes	Yes
Conflicts of interest	Yes	Yes

<sup>1)</sup> Administrative, management and supervisory bodies.

#### 6.2 MANAGEMENT OF RELATIONSHIPS WITH SUP-PLIERS (G1-2)

A responsible procurement strategy can positively contribute to achieving a sustainable value chain.

In addition to achieving an optimal price-performance ratio, procurement processes at UNIQA are designed to meet compliance and sustainability requirements. The Group Procurement Policy sets out guidelines to ensure that suppliers are not only economically sustainable but also act in a socially and ecologically sustainable manner. These guidelines are designed to optimise procurement processes on the basis of market comparisons and to ensure compliance requirements are met through adherence to standards. The policy applies to (re)insurance companies and large service providers. The Head of Group Procurement and the Management Board member for Operations, Data & IT are responsible for implementing the policy.

Detailed master data is collected on companies as part of the supplier registration process. Suppliers are expected to comply with and act according to the principles set forth in the UNIOA Code of Conduct. The UNIOA Code of Conduct contains the material, social and ecological criteria in accordance with the UN Global Compact. Annual surveys are conducted for UNIQA's most important suppliers to verify compliance with international human rights standards - including standards stipulated by the International Labour Organisation (ILO) and the United Nations - as well as financial stability as part of the supplier evaluation to identify potential default risks among suppliers. Findings from the third-party risk management process launched in the fourth quarter of 2024 will be available in 2025. Based on this, targeted measures will be developed to reduce potential risks in the supply chain.

## 6.3 CONFIRMED INCIDENTS OF CORRUPTION OR BRIBERY (G1-4)

There were no confirmed incidents of corruption, bribery or money laundering in the financial year. Furthermore, there were no confirmed violations of the law, and no fines imposed in relation to corruption, bribery or money laundering. As a result, no ad hoc measures were required.

For more information on the prevention and detection of corruption and bribery, see section 6.3.

## 6.4 POLITICAL INFLUENCE AND LOBBYING ACTIVITIES (G1-5)

Insufficient policies with regard to responsibilities, political engagement, lobbying activities and donations can result in UNIQA exerting public influence outside its sphere of interest. Political donations are governed by the Group Compliance Policy. Donations to political parties, their affiliated organisations or political candidates are prohibited under the policy. In line with strict requirements, only sponsorships of events organised by the aforementioned groups, as well as advertisements in the media of these groups, are permitted. In the financial year, no political donations were made.

One key task within the Legal & Compliance department, which is assigned to the Finance & Risk Management Board department, consists of coordinating lobbying activities, particularly in connection with participation in the "Insurance Europe" and "Association of Austrian Insurance Companies" interest groups. The focus here is on key regulatory issues that affect both UNIQA's core business activities and its social responsibility.

UNIQA supports the efforts of the European Commission to mobilise private capital for investments in a climate-neutral Europe through the Action Plan for Sustainable Finance and the European Green Deal. The legislative projects being pursued to this end, including the Disclosure Regulation, the Taxonomy Regulation, the Corporate Sustainability Reporting Directive and the Corporate Sustainability Due Diligence Directive, do however present certain challenges for insurers due to their complexity and the short time frame for implementation.

UNIQA also supports the European Commission's objective of making it easier for consumers to access financial products. However, the changes discussed in the context of the European Retail Investor Strategy, such as placing limits on commissions for insurance sales and introducing cost benchmarks, could make access to insurance-based investment products more difficult. After all, professional commission-based insurance advice helps all customers gain easier access to insurance products, avoids underand over-coverage, and facilitates comparisons.

Digital innovations and artificial intelligence not only offer new economic opportunities, but also pose a number of challenges. A regulatory framework that does not hamper existing regulations while simultaneously opening up opportunities for digital innovation in Europe is required in this regard.

In order to provide transparency and comprehensive information with regard to its lobbying activities, UNIQA Insurance Group AG is registered in the EU Transparency Register under the number 908990192864-67. In addition, no members of UNIQA's Management Board or Supervisory Board have held a position in public administration or with the regulatory authorities in the two years prior to their appointment.

#### Notes to the Consolidated Financial Statements

#### **GENERAL INFORMATION**

UNIQA Insurance Group AG is a company domiciled in Austria. The address of the company's registered office is Untere Donaustrasse 21, 1029 Vienna, Austria. The Group's business activities mainly comprise the business with property and casualty, as well as health and life insurance.

The shares of UNIQA Insurance Group AG are listed on the prime market segment of the Vienna Stock Exchange. The company is registered in the company registry of the Commercial Court of Vienna under FN 92933t. And is subject to the regulatory requirements of European and Austrian supervisory authorities (Financial Market Authority, European Insurance and Occupational Pensions Authority). The requirements include in particular the quantitative and qualitative solvency requirements.

Unless otherwise stated, these consolidated financial statements are prepared in € thousand. Rounding differences may occur when totalling rounded amounts and percentages. The functional currency at UNIQA is the euro. The reporting date is 31 December.

#### **Accounting principles**

The consolidated financial statements were prepared in line with the International Financial Reporting Standards (IFRSs) as applicable in the European Union (EU). The additional requirements of Section 245a(1) of the Austrian Commercial Code and Section 138(8) of the Austrian Insurance Supervision Act were taken into account.

#### Use of judgements and estimates

The consolidated financial statements require the Group Management Board to make judgements, estimates and assumptions that relate to the application of accounting policies and the amounts stated for the assets, liabilities, income and expenses. Actual results may differ from these estimates. Estimates and their underlying assumptions are reviewed on an ongoing basis. Revisions to estimates are recorded prospectively. Risks related to the consequences

of climate change were taken into account in the measurement of assets and liabilities, such as in the context of the impairment test for assets as well as in the calculation of technical provisions.

Discretionary judgements and assumptions regarding the future which could have a significant impact on these Consolidated Financial Statements are described in the following notes:

Note 2.1: Investment property (assumptions used in determining fair values)

Note 2.2: Financial assets accounted for using the equity method (assumptions and models used in STRABAG SE's earnings estimates)

Note 2.3: Other investments and unit-linked and indexlinked life insurance investments (determination of fair values and calculation of expected credit losses)

Note 3: Insurance contracts (assumptions and models for the calculation of assets and liabilities from insurance and reinsurance contracts)

Note 4.2: Intangible assets (assumptions used in determining goodwill)

Note 6.2: Deferred taxes (assessment of the ability to realise deferred tax assets)

Note 7.1.1: Defined benefit plans (calculation of the present value of the defined benefit obligations)

The following table provides a summary of the measurement standards for the individual asset and liability items:

#### Statement of financial position item

#### Standard of measurement

Assets	
Property, plant and equipment	Amortised cost
- property, plant and equipment that constitute underlying items	Fair value
Intangible assets	
- with determinable useful life	Amortised cost
- with indeterminable useful life	At lower of acquisition cost or recoverable amount
Investments	
Investment property	Amortised cost
Investment properties that constitute underlying items	Fair value
Investments accounted for using the equity method	At lower of amortised pro-rata value of the equity or recoverable amount
Other investments	
Financial assets at fair value through profit or loss	Fair value
Financial assets at fair value through other comprehensive income	Fair value
Financial assets at amortised cost	Amortised cost
Unit-linked and index-linked life insurance investments	Fair value
Assets arising from insurance contracts	As per the measurement of liabilities arising from insurance contracts
Assets arising from reinsurance contracts	As per the measurement of liabilities arising from insurance contracts
Receivables and other assets	Amortised cost
Deferred tax assets	Undiscounted measurement applying the tax rates that are expected for the period in which an asset is realised or a liability met
Cash	Amortised cost
Assets in disposal groups held for sale	Lower of carrying amount and fair value less cost to sell
Liabilities	
Subordinated liabilities	Amortised cost
Liabilities arising from insurance contracts	Actuarial measurement using the relevant measurement methods in accordance with IFRS 17
Liabilities arising from reinsurance contracts	Actuarial measurement using the relevant measurement methods in accordance with IFRS 17
Financial liabilities	
- Liabilities from bonds and loans	Amortised cost
- Derivative financial instruments	Fair value
- Lease liabilities	Amortised cost
Other provisions	
- from defined benefit obligations	Actuarial valuation applying the projected unit credit method
- other	Present value of future settlement value
Liabilities and other items classified as equity or liabilities	At amortised cost or present value of the future settlement amount

## CHANGES IN MAJOR ACCOUNTING POLICIES AS WELL AS NEW AND AMENDED STANDARDS

With the exception of the following changes, the outlined accounting policies were consistently applied to all periods presented in these consolidated financial statements.

## Amendments to be applied for the first time

The Group applied the following amendments to standards with the initial application date of 1 January 2024. None of the new regulations arising from this have a significant impact on UNIQA's assets, liabilities, financial position and profit or loss.

### **Amended standards**

IFRS 1, IFRS 7, IFRS 9, IFRS 10, IAS 7

First-time application by UNIQA

Amendments	s to be applied for the first time	
IAS 1	Amendments to IAS 1 Presentation of Financial Statements: Classification of Liabilities as Current or Non-current	1 January 2024
IFRS 16	Amendments to IFRS 16 Leases: Lease Liability in a Sale and Leaseback	1 January 2024
IAS 7, IFRS 7	Amendments to IAS 7 Statement of Cash Flows and IFRS 7 Financial Instruments: Disclosures: Supplier Finance Arrangements	1 January 2024

## New and amended standards to be applied in the future

The IASB has also published a range of new standards that will be applicable in the future. UNIQA does not intend to adopt these standards early. From today's point of view, no material impacts are expected on the Group's assets, liabilities, financial position and profit or loss. The impacts of the new IFRS 18 standard are being analysed.

1 January 2026

No

### **SEGMENT REPORTING**

The accounting and measurement methods of the segments that are subject to mandatory reporting correspond with the consolidated accounting and measurement methods. Earnings before taxes for the segments were determined taking the following components into consideration: Summation of the IFRS profits/(losses) in the individual companies, taking the elimination of net investment income in the respective segment and impairment of goodwill into consideration. All other consolidation effects (profit/(loss) for the period of associates, elimination of intercompany profits/(losses) and other cross-segment effects) are included in "Consolidation". The segment profit/(loss) thus obtained is reported to the Management Board of UNIQA Insurance Group AG for managing the Group in the following operating segments:

UNIQA Austria – includes the Austrian insurance business.

UNIQA International – includes all international primary insurance companies and international service companies as well as investment management companies and pension funds. This segment is divided on a regional basis into the following main areas:

- Central Europe (CE Poland, Slovakia, Czechia and Hungary)
- Eastern Europe (EE Romania and Ukraine)
- Southeastern Europe (SEE Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Kosovo, Montenegro, North Macedonia and Serbia)
- Western Europe (WE Liechtenstein)
- Administration

Reinsurance – includes UNIQA Re AG (Zurich, Switzerland) and the reinsurance business of UNIQA Insurance Group AG.

Group functions – includes the remaining items for UNIQA Insurance Group AG (net investment income and administrative costs) as well as all other remaining Austrian and international service companies.

Group reinsurance relationships are presented in a simplified manner for management and reporting purposes. Starting in this financial year, reinstatement premiums are also presented for intra-Group reinsurance relationships – similarly to the external reinsurance. The previous year's figures were restated accordingly.

Derivative financial instruments	12,721	12,721	6,673	6,673
Lease liabilities	82,606	82,606	84,823	84,823

Financial assets and financial liabilities are recognised and measured in the statement of financial position according to the rules of IFRS 9. Financial assets are recognised for the first time on the settlement date. They are derecognised when the contractual rights to cash flows from an asset expire or the rights to receive the cash flows in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred.

### 2. INVESTMENTS

### 2.1 Investment property

Land and buildings, including buildings on third-party land, which are held as long-term investments to earn rentals or for capital appreciation or both and which do not constitute underlying items in life and health insurance are measured using the cost model. These investment properties are amortised on a straight-line basis over a useful life of 15 to 80 years and are recognised under the item "Net investment income".

In accordance with IAS 40.32A, those properties that represent underlying items in life and health insurance with participation are measured at fair value.

The fair value is determined by means of expert's opinions. These expert's opinions are prepared on the basis of earnings-oriented valuation techniques. It requires making assumptions about the future, principally concerning the capitalisation and discount rate, the expected utilisation (vacancy rate), the development of future rental charges and the condition of the land and buildings. Property value, location, usable area and usage category for the property are also taken into account.

For this reason, all measurements of the fair value for the land and buildings come under Level 3 of the hierarchy in accordance with IFRS 13. The valuation techniques respond to the underlying assumptions and parameters.

For instance, any reduction in the discount rate applied would result in an increase in the values ascertained for the land and buildings if the other assumptions and parameters remained unchanged.

Conversely, any reduction in the expected utilisation or the expected rental charges would, for instance, result in a decrease in the values ascertained for the land and buildings if the other assumptions and parameters remained

unchanged. Measurement-relevant parameters are continuously updated. The assumptions relating to the reporting date are determined on the basis of the expert's best estimate, taking current market conditions into account.

The rental income generated from investment property in the financial year totalled €139,404 thousand (2023: €130,428 thousand).

Land prices +5 %	1.0	1.0

## 2.2 Financial assets accounted for using the equity method

Investments in associates are accounted for using the equity method. They are initially recognised at acquisition cost, which also includes transaction costs. After initial recognition, the consolidated financial statements include the Group's share in profit/(loss) for the period and in changes in other comprehensive income until the significant influence ends.

UNIQA reviews at each reporting date whether there are any indications that the investment in associated companies is impaired. If this is the case, the impairment requirement is calculated as the difference between the carrying amount of the investment in the associate and the corresponding recoverable amount and recognised separately in profit/(loss) for the period. An impairment loss is reversed in the event of an advantageous change in the estimates used to determine the recoverable amount.

<sup>1)</sup> Estimate for 31 Dec. 2024 based on financial information as at 30 June 2024 on STRABAG SE available as at the reporting date

As at the reporting date 31 December 2024, UNIQA held a 17.0 per cent stake in STRABAG SE (31 December 2023: 15.7 per cent). UNIQA treats STRABAG SE as an associate due to contractual arrangements. As part of the accounting using the equity method, an assessment of the share in STRABAG SE was made, based on the financial information published at 30 June 2024, for the period up until 31 December 2024.

The fair value of the shares is based on the stock market price at 31 December 2024 and amounts to €774,322 thousand (2023: €649.254 thousand).

In the second half of 2024, the shares from the capital increase were merged with the regular ISIN with legal effect. This increased UNIQA's shareholding in STRABAG SE by 1.27 per cent.

## 2.3 Other investments and unit-linked and indexlinked life insurance investments

The classification and measurement of financial assets under IFRS 9 is based on the business model and the SPPI criterion ("Solely Payments of Principal and Interest").

Financial assets are divided into the following classification categories:

Other investments At 31 December 2024 In € thousand	Fixed-income securities	Variable-income securities	Loans and other investments	Derivative financial instruments	Total
Financial assets at fair value through profit or loss	2,310,610	1,449,558	1,602	742	3,762,511
Mandatory	2,310,610	1,449,558	1,602	742	3,762,511
Financial assets at fair value through other comprehensive income	12,997,638	199,804	0	0	13,197,442
Mandatory	12,997,638	0	0	0	12,997,638
Designated	0	199,804	0	0	199,804
Financial assets at amortised cost	0	0	483,369	0	483,369
Total	15,308,248	1,649,362	484,971	742	17,443,323

Other investments At 31 December 2023 In € thousand	Fixed-income securities	Variable-income securities	Loans and other investments	Derivative financial instruments	Total
Financial assets at fair value through profit or loss	2,272,009	1,292,910	951	15,850	3,581,719
Mandatory	2,272,009	1,292,910	951	15,850	3,581,719
Financial assets at fair value through other comprehensive income	12,835,537	188,646	0	0	13,024,182
Mandatory	12,835,537	0	0	0	12,835,537
Designated	0	188,646	0	0	188,646
Financial assets at amortised cost	0	0	600,273	0	600,273
Total	15,107,546	1,481,556	601,224	15,850	17,206,175

A reclassification of financial assets is only possible if the business model in which a financial asset is held has changed. UNIQA only expects such changes to the business model in very rare cases. Reclassifications are to be performed prospectively in these cases.

## Financial assets at fair value through profit or loss (mandatory)

Financial assets must be measured at fair value through profit or loss if they

- are held within the framework of an "other" business model in accordance with IFRS 9, or
- the contractual cash flows of the asset do not represent solely payments of principal and interest on the outstanding principal ("SPPI criterion" is not met).

All unit-linked and index-linked life insurance investments are assigned to an "other" business model and are therefore required to be classified and measured at fair value through profit or loss.

All value changes are recorded in profit/(loss) for the period.

Unit-linked and index-linked life insurance investments At 31 December 2024 In € thousand	Fixed-income Va securities	ariable-income securities	Loans and other investments	Investments under investment contracts	Total
Financial assets at fair value through profit or loss	1,752,058	2,221,543	138,411	247,724	4,359,736

Unit-linked and index-linked life insurance investments At 31 December 2023 In € thousand	Fixed-income Va securities	ariable-income securities	Loans and other investments	Investments under investment contracts	Total
Financial assets at fair value through profit or loss	1,817,816	2,020,661	175,458	282,439	4,296,374
Total	1,817,816	2,020,661	175,458	282,439	4,296,374

## Financial assets (required to be) measured at fair value through other comprehensive income

Financial assets are required to be recognised at fair value through other comprehensive income if they are

- held as part of a "hold-and-sell" business model in accordance with IFRS 9, and
- the contractual cash flows of the asset represent solely payments of principal and interest on the outstanding principal ("SPPI criterion" is met).

Financial assets at fair value through other comprehensive income are initially measured at fair value plus directly attributable transaction costs. The subsequent measurement takes place at fair value. Changes in market value are generally recognised in other comprehensive income. Changes resulting from the effective interest method and foreign currency translation are recognised in profit/(loss) for the period. Expenses and income from impairments of the model for expected credit losses are recognised both in profit/(loss) for the period and in other

comprehensive income. In the case of derecognition of financial assets, the accumulated other comprehensive income is reclassified to profit/(loss) for the period.

## Financial assets at fair value through other comprehensive income (designated)

For equity instruments, an irrevocable option exists at the date of addition to reclassify them as at fair value through other comprehensive income ("FVOCI option"). This option can be exercised individually for each equity instrument.

UNIQA applies the FVOCI option for selected strategic participations and equity investments.

All value changes are recorded in other comprehensive income. A reclassification of value changes recorded in other comprehensive income to profit/(loss) for the period is not permitted upon derecognition.

fair value through other comprehensive income	250	0			25	0

These mainly comprise shares in Raiffeisen Bank International AG.

#### Financial assets at amortised cost

Financial assets are measured at amortised cost if they

- are held as part of a "hold" business model in accordance with IFRS 9, and
- the contractual cash flows of the asset represent solely payments of principal and interest on the outstanding principal ("SPPI criterion" is met).

Financial assets at amortised cost are initially recognised at acquisition cost plus directly attributable transaction costs. Changes resulting from the effective interest method, foreign currency translation and impairments are recognised in profit/(loss) for the period.

#### **Business model criterion**

To assess the relevant business models, UNIQA focuses in particular on the strategic management of the investments. As an insurance company, UNIQA holds financial assets mainly to finance liabilities from insurance contracts.

Under other investments, UNIQA divides the business models into "hold-and-sell", "hold" and "other". Financial assets under other investments are mainly allocated to the "hold-and-sell" business model. Other investments without the intention to sell, such as term deposits and loans, are allocated to the "hold" business model. Other investments are allocated to the "other" business model if they are primarily managed and assessed on a fair value basis, such as in the case of venture capital or restructurings.

#### **SPPI** criterion

When the SPPI criterion is reviewed, the characteristics of the contractual cash flows are analysed. To analyse the cash flows, UNIQA uses both the specific contracts (such as securities prospectuses) and (semi-)automated IT support from external information systems. External information systems are usually relied upon for exchange-traded securities such as government bonds and corporate bonds because these exchanges record the characteristics of the contractual cash flows in standardised databases.

## Determination of fair value – significant estimates

A range of accounting policies and disclosures requires the determination of the fair value of financial and non-financial assets and liabilities. UNIQA has defined a control framework with regard to the determination of fair value. This includes a measurement team, which bears general responsibility for monitoring all major measurements of fair value, including Level 3 fair values, and reports directly to the respective Member of the Management Board.

A regular review is carried out of the major unobservable inputs and the measurement adjustments. If information from third parties (e.g. price quotations from brokers or price information services) is used to determine fair values, the evidence obtained from third parties is examined in order to determine whether it meets the requirements of IFRSs. The level in the fair value hierarchy to which these measurements are attributable is also tested. Major items in the measurement are reported to the Investment Committee.

As far as possible, UNIQA uses data that are observable on the market when determining the fair value of an asset or a liability. Based on the inputs used in the valuation techniques, the fair values are assigned to different levels in the fair value hierarchy:

- Level 1: quoted prices (unadjusted) in active markets for identical assets and liabilities. At UNIQA, these primarily involve quoted shares, quoted bonds and quoted investment funds.
- Level 2: measurement parameters that are not quoted prices included in Level 1 but which can be observed for the asset or liability either directly (i.e. as a price) or indirectly (i.e. derived from prices), or are based on prices from markets that have been classified as inactive. The parameters that can be observed here include, for example, exchange rates, yield curves and volatilities. At UNIQA, these include in particular quoted bonds that do not fulfil the conditions under Level 1, along with structured products.
- Level 3: measurement parameters for assets or liabilities that are not based or are only partly based on observable market data. The measurement here primarily involves application of the discounted cash flow method, comparative procedures with instruments for which there are observable prices and other procedures. As there are often no observable parameters, the estimates used can have a significant impact on the measurement result. At

UNIQA, Level 3 primarily includes other equity investments, private equity and hedge funds as well as structured products that do not fulfil the conditions under Level 2.

If the inputs used to determine the fair value of an asset or a liability can be assigned to different levels of the fair value hierarchy, the entire fair value measurement is assigned to the respective level of the fair value hierarchy that corresponds to the lowest input significant for the measurement overall.

UNIQA recognises reclassifications between different levels of the fair value hierarchy at the end of the reporting period in which the change occurred.

The measurement processes and methods are as follows:

#### Financial instruments measured at fair value

For the measurement of capital investments, techniques best suited to the establishment of corresponding value are applied. The following standard measurement procedures are applied to financial instruments classified in Levels 2 and 3:

- Market approach
- The measurement method in the market approach is based on prices or other applicable information from market transactions which involve identical or comparable assets and liabilities.
- Income approach
   The income approach corresponds to the method
   whereby the future (expected) payment flows or earnings
   are inferred on a current amount.

## Transfers between Levels 1 and 2

In the reporting period transfers from Level 1 to Level 2 were made in the amount of €921,792 thousand (2023: €535,582 thousand) and from Level 2 to Level 1 in the amount of €505,313 thousand (2023: €951,190 thousand).

These are attributable primarily to changes in trading frequency and trading activity.

### **Sensitivities**

## Fixed-income securities

The most important unobservable input in the measurement of fixed-income securities is the specific credit spread. In order to be able to measure these securities in a discounted cash flow model, the spreads are determined using a selection of reference securities with comparable characteristics. For the fixed-income securities in Level 3, an increase in the discount rate by 100 basis points results in a 3.7 per cent reduction in value (2023: 4.6 per cent). A reduction in the discount rate by 100 basis points results in a 4.0 per cent increase in value (2023: 3.6 per cent).

#### Other

Other securities under Level 3 mainly comprise private equity funds and other participations. Private equity funds are measured based on the net asset values which are determined by the fund manager using specific unobservable inputs for all underlying portfolio positions. This is done in accordance with the International Private Equity and Venture Capital Valuation (IPEV) Guidelines.

## **Securities lending transactions**

Securities loaned within the framework of securities lending continue to be recognised in the statement of financial position, as the significant opportunities and risks are not transferred through the lending. In return, UNIQA receives collateral in the form of securities, which are accordingly not recognised in the statement of financial position. As at the reporting date, the carrying amount of the financial assets lent in the category "Fixed-income securities measured at fair value through other comprehensive income" from securities lending transactions amounted to €643,791 thousand (2023: €526,158 thousand). The equivalent value of the collateral received is €691,204 thousand (2023: €571,583 thousand). The components of these transactions recognised in profit or loss are reported under "Net investment income".

## Carrying amounts for loans and other investments

In € thousand

The currency losses in net investment income amount to €-1,149 thousand (2023: €5,064 thousand).

Current income from fixed-income securities measured at fair value through other comprehensive income includes current interest income according to the effective interest method in the amount of €387,460 thousand (2023: €355,268 thousand). In the category "Financial assets at amortised cost", these amount to €53,042 thousand (2023: €41,872 thousand).

## Impairment – significant estimates

Expected credit losses are calculated using the 3-stage model for debt instruments measured at amortised cost or at fair value through other comprehensive income. Financial instruments measured at fair value through profit or loss and equity instruments measured at fair value through other comprehensive income ("FVOCI option") are not subject to the impairment model.

To determine the expected credit losses, UNIQA uses a credit deterioration model in which the amount of the risk provision to be recognised is based on the change in the default risk of a financial instrument following its addition. The risk provision is also recognised for expected losses and therefore represents a prospective impairment in the amount of the present value of the expected credit losses. The expected credit losses are determined as at the measurement date as the difference between the discounted contractual cash flows and the risk-weighted cash flows. The scenario-based risk weighting of the cash flows is carried out using the probability of default and the loss given default. The model that UNIQA uses to determine expected credit losses aims to come up with an undistorted and scenario-weighted sum. It does this by taking into account the time value of money as well as data on current economic conditions and their future forecasts that are available at the measurement date without unreasonable time and cost. The probabilities of default also include forward-looking information and take the macroeconomic development of the unemployment rate into account as well as the high-yield spreads.

The probability of default is the probability that debtors will be unable to meet their payment obligations, either within the next twelve months or over the entire remaining term. The loss given default corresponds to the expectation of how much the loss of a financial asset will be in the event of default.

UNIQA obtains most of the data used to calculate the probability of default and the loss given default from external data sources. The probability of default is determined at issuer level, and the loss given default is allocated on the basis of long-term averages of individual classes of financial instruments. In cases where specific input data is not completely available from external data sources (e.g. financial assets that are not externally rated), the risk parameters were allocated on the basis of benchmarks of comparable instruments and expert assessments.

The time value of money (which is needed to determine the expected credit losses) is the effective interest rate of the respective financial asset, determined at the time when the financial asset was acquired.

The expected credit loss of a financial instrument is determined based on the assigned impairment level on the measurement date either as the present value of the expected defaults over the next twelve months or as the present value of the expected defaults over the entire remaining term.

At each measurement date, all financial assets within the scope of the impairment model are assigned to an impairment level.

For financial instruments in Level 1, an impairment is recognised in the amount of the 12-month expected credit loss (12-month ECL). The 12-month ECL represents a portion of the total expected credit losses (lifetime ECLs) that result from default events on a financial instrument that are possible within twelve months after the reporting period. Financial instruments for which no significant increase in the credit risk was determined on the measurement date as well as financial instruments first recognised on the measurement date are assigned to Level 1. Furthermore, instruments with a low default risk (investment grade) are regularly assigned to Level 1 of the impairment model. UNIQA makes use of the option of not analysing a significant increase in credit risk for instruments with a low default risk (investment grade - in UNIQA's model up to the equivalent of a rating level of BBB-) on the measurement date.

For Level 2 financial instruments, an impairment is recognised in the amount of the present value of the expected credit losses over the entire maturity. Financial instruments for which a significant increase in the credit risk was identified on the measurement date are assigned to Level 2.

For Level 3 financial instruments, an impairment is recognised in the amount of the present value of the expected credit losses over the entire maturity. Financial instruments viewed as having diminished creditworthiness on the measurement date are assigned to Level 3.

UNIQA assesses a significant increase in credit risk overall on the basis of quantitative and qualitative criteria. To make this quantitative assessment, the probability-of-default curve over the lifetime at the measurement date is compared with the forward-looking probability-of-default curve over the lifetime at the time of initial recognition. A significant increase in credit risk is normally assumed whenever there is a relative doubling of the probability of default since the date of purchase. If a significant increase in credit risk is determined on the measurement date, an allocation to "Level 2" is made. As a backstop for the identification of a significant increase in the credit risk of a financial instrument, contractual cash flows are assumed to be overdue at more than 30 days.

In the overall assessment, a qualitative evaluation of the level allocation for Level 1 or Level 2 is also carried out based on external market indicators and by subject matter experts. In the qualitative assessment, particular consideration is given to factors such as a significant change in contractual terms, a borrower's ability to repay their other exposures, as well as external factors with a potentially significant influence on the borrower's ability to repay.

An allocation to "Level 3" (credit-impaired financial assets) of the impairment model is made if one or more events with an adverse effect on the expected future cash flows of the financial asset occur. Among others, UNIQA considers the following events to be indicators:

- significant financial difficulties on the part of the issuer or borrower:
- default of or overdue contractual cash flows;
- financial concessions by lenders;
- increased likelihood of insolvency or restructuring proceedings;
- disappearance of an active market due to the financial difficulties of the financial asset; and

• financial assets with a large discount that already reflects the credit losses incurred.

In addition, a financial instrument is assigned to Level 3 if contractual cash flows are more than 90 days in default. To assess whether a financial asset is credit-impaired, the indicators are considered both individually and collectively.

# Expected credit losses on fixed-income securities measured at fair value through other comprehensive income

Changes in value that are recognised on the basis of the impairment model in accordance with IFRS 9 for expected credit losses can include both losses and reversals. In the financial year, a surplus of reversals of losses was recorded in the category "Financial assets measured at fair value through other comprehensive income" in the amount of  $\$ 32,813 thousand (2023: recognition of losses in the amount of  $\$ -30,642 thousand).

### 3. INSURANCE CONTRACTS

Insurance and reinsurance contracts along with investment contracts with a discretionary participation feature are recognised in accordance with the accounting provisions for insurance contracts (IFRS 17).

## Judgements and estimates

## **Judgements**

Information on judgements that have a material effect on the amounts reported in the Consolidated Financial Statements is provided below:

- Identification of insurance contracts, reinsurance contracts and investment contracts with discretionary participation features: Assessment of whether a significant insurance risk is transferred, and the contracts thus fall within the scope of IFRS 17, or whether there are any contracts with direct participation features.
- Determination of the valuation unit: identification of portfolios of insurance contracts and determination of groups that would have a negative impact at initial recognition and those where there is no significant likelihood that they will have a negative impact at initial recognition.
- Variable fee approach: assessment of the applicability of the variable fee approach for contracts with direct profit participation.
- Premium allocation approach: applicability of the premium allocation approach for long-term contracts.
- Estimates of future cash flows: estimate of the expected cash flows associated with fulfilment of the contract.
- Acquisition cash flows: determination of whether the acquisition cash flows can be allocated directly.
- Interest rate assumptions: determination of the yield curves to be used for discounting.
- Measurement: determination of the method for calculating the risk adjustment for non-financial risks and the coverage units provided.

## Assumptions and estimates

Changes in the key assumptions listed below could materially change the fulfilment cash flows in the following financial year. However, these changes would lead to an adjustment of the contractual service margin and would not affect the carrying amount of the insurance contracts unless the changes result from onerous contracts or do not relate to future benefits:

- Property and casualty insurance contracts: assumptions related to claims development and claims frequency.
- Health and life insurance policies: assumptions for estimates of future cash flows related to mortality, longevity, disability or morbidity, customer behaviour (lapse) and profit participation rate.

The assumptions on discount rates and cost development have an impact on all business lines.

Significant assumptions and estimates in connection with calculating the fulfilment cash flows, the contractual service margin and the investment component are explained below.

### **Fulfilment cash flows**

Fulfilment cash flows comprise:

- estimates of future cash flows,
- discounting to reflect the time value of money and the financial risks associated with future cash flows, and
- risk adjustment for non-financial risk.

The objective of **estimating future cash flows** is to determine the expected value of a range of scenarios that reflect the full scope of all possible outcomes. The cash flows from each scenario are discounted and weighted, taking into account the estimated probability that this outcome will lead to an expected present value. UNIQA applies stochastic modelling if the cash flows are influenced by complex underlying factors, and they therefore do not react linearly to changes in the economic environment. This is the case, for example, with profit-participating contracts. If this is not the case, a deterministic calculation is used.

The estimates of future cash flows incorporate, in an unbiased way, all reasonable and supportable information available without undue cost or effort about the amount, timing and uncertainty of those future cash flows. The information is based on company-specific data provided that the estimates do not contradict observable market data, and the assumptions take future developments sufficiently into account. When estimating the cash flows, UNIQA takes into account current expectations of future events that might affect those cash flows. Expectations of future changes in legislation that would change or discharge the present obligation or create new obligations under the existing insurance contract are not taken into account until the change in legislation is substantively enacted.

Cash flows within the boundary of an existing insurance contract relate directly to the fulfilment of the contract, including those cash flows for which UNIQA can decide the amount or maturity at its own discretion. These cash flows include premiums, insurance benefits, acquisition cash flows and other costs incurred to fulfil the contract.

Insurance acquisition cash flows result from the sale of insurance contracts and are directly attributable to the portfolio to which the contract belongs. Other costs recognised in the cash flows are:

- claims handling costs,
- administrative costs associated with the servicing of a contract, including recurring commissions, and
- asset management costs.

Acquisition cash flows and other costs also include fixed and variable overhead costs that are directly attributable to the settlement of insurance contracts. Such overheads are allocated to groups of contracts using methods that are systematic and rational, and are consistently applied to all costs that have similar characteristics.

The distribution of acquisition and administrative costs is based on the premiums written for the respective group of insurance contracts. The distribution of costs for processing claims is based on the actual claims of the respective group of insurance contracts.

Insurance contracts of one group can influence the cash flows to policyholders of another group or be influenced by these (**mutualisation**). This is the case, for example, when the policyholders share the returns on the same specified pool of underlying items with policyholders of other contracts and the guarantee agreement of one group leads to a reduction in another group's revenue.

Mutualisation has an impact on the measurement of the fulfilment cash flows of the groups concerned. The fulfilment cash flows of a group include all payments to policyholders from other groups resulting from the contract conditions, while all payments to policyholders of the group that have already been included in the fulfilment cash flows of another group must not be taken into account.

The contract boundaries determine which future cash flows are to be included in the measurement of a group of insurance contracts. Cash flows are within the boundary of an insurance contract if they result from substantive rights and obligations that exist during a specific period in which the Group can compel the policyholders to pay the premium or in which UNIQA has a substantive obligation to provide the policyholders with insurance contract services.

## Significant assumptions used in the calculation of future cash flows

#### Property and casualty insurance

Future cash flows from premiums are estimated using contract data taking future lapses by policyholders into account. The lapse rates are derived from past experience at product group level.

Loss or cost ratios and associated payment patterns are derived from past experience to estimate future cash flows from future service and costs. Where necessary, judgements are also made as to the extent to which past trends can also be expected in the future, as well as whether new trends should be taken into account.

Reserves for incurred claims that have not yet been settled, including incurred claims that have not yet been reported, are usually estimated using generally accepted statistical triangular methods (such as chain ladder or Bornhuetter-Ferguson) on the basis of the years in which they occurred. These methods assume that the company's own past experience provides a sufficiently good indication of future claim payments. Other best practice methods (such as methods based on claims frequency and loss amounts) are only used in exceptional cases. The selection of the appropriate procedure for the respective sub-portfolio is a key discretionary decision. Finally, the future cash flows are estimated from the claims payments determined in this way using settlement patterns also derived from past experience.

#### Health insurance and life insurance

The assumptions for the best estimate described below are determined based on past, present and expected developments. These are reviewed and updated at least once per year.

### Assumptions on profit participation

The policyholder's assumed profit participation for the corresponding life insurance business is derived for each economic scenario using the management rules. The profit participation is derived in accordance with the applicable statutory profit participation regulations.

# Cost assumptions

Cost assumptions are based on the directly attributable actual costs incurred in the years prior to the measurement date. Future additional costs are taken into account in the cost allocation, whereas extraordinary costs are eliminated. The costs expected along the projection period are based on the performance of the portfolio, with differences in the administrative expenditure taken into account in accordance with relevant contractual features, such as higher administrative expenditure for contracts with mandatory premiums as compared with those that are premium-free.

#### Lapse assumptions

Lapse rates are based on an analysis of previous lapse rates and the average for comparable financial years. For new products, the lapse assumptions are based on similar products from the past.

### Assumptions on commissions

The commission estimates are based on the applicable commission agreements.

#### Assumptions on mortality and disability-morbidity

Mortality and disability-morbidity assumptions are based on the best estimate for future events. Past developments and external demographic forecasts are used here.

### Interest rate assumptions

All cash flows are discounted using the adjusted risk-free yield curve, which reflects the special features of the cash flows and the liquidity features of the insurance contracts. The risk-free base rates for all relevant currencies are calculated using swap and government bonds market data. The underlying market data sources and the parameters required for the interpolation and extrapolation of the risk-free base curves are harmonised with those of EIOPA. The risk-free curve including adjustments is extrapolated to a final forward interest rate after the last liquid market data point. The ultimate forward rate reflects the long-term real interest rate and inflation expectations and is updated in accordance with the EIOPA parameters.

The risk-free yield curve is adjusted by an illiquidity premium in order to reflect the liquidity feature of the insurance contracts. Illiquidity adjustments are determined by calculating risk-adjusted spreads on government and corporate bonds within the portfolio of the respective entity. Cash flows that fluctuate based on the yields of the underlying items are adjusted to account for the effects of this volatility using risk-neutral modelling techniques and discounted using the risk-free interest rates including the illiquidity adjustment.

## Assumptions on cash flows to be paid to policyholders

Insurance contracts without direct profit participation often give rise to cash flows to policyholders over which the entity has some discretion. The basis on which the contractual obligations are determined must be defined at the beginning of the contract in order to determine how any change in the discretionary cash flows is to be identified. A change in the discretionary cash flows is regarded as relating to future service, and adjusts the contractual service margin accordingly.

#### Risk adjustment for non-financial risk

Risk adjustment is the amount that would be required as consideration for bearing the uncertainty about the amount and timing of the cash flows that arises from non-financial risk. This reflects the diversification benefit of insurance contracts issued, which is in line with the consideration demanded and reflects the extent of risk aversion.

In property and casualty insurance, the risk adjustment is determined using the confidence level method. The cost-of-capital method is applied in health insurance and life insurance.

For proportional reinsurance contracts in property and casualty insurance, the risk adjustment for non-financial risk is derived from that of the primary insurance. The basis for this is the ratio between the gross and net liability for incurred claims.

### Confidence level method

The probability distribution of all expected future cash flows is estimated and the risk adjustment for non-financial risk is calculated as the difference between the median of the future cash flows and the value-at-risk, measured with a percentile of 75 per cent.

### Cost of capital method

The risk adjustment for non-financial risks is calculated using a cost of capital rate, which is applied to the required capital amount for all future years. The resulting capital requirement is discounted using a risk-free yield curve adjusted for illiquidity. The required principle is determined by estimating the probability distribution of all future present values of the cash flows and determining the capital required to meet the contractual obligations with a confidence level of 99.5 per cent over the term of the contracts. The cost of capital rate is the additional consideration that

investors would demand for exposure to non-financial risk. The cost of capital rate is 6 per cent (2023: 6 per cent).

### Contractual service margin

The contractual service margin is a component of an asset or liability for a group of insurance contracts and represents unearned profit on a group of insurance contracts that the entity will recognise once future insurance contract services are provided.

An amount of the contractual service margin for a group of insurance contracts is recognised in profit or loss in each period to reflect the insurance contract services provided under the group of insurance contracts in that period.

#### Determination of the coverage units

The number of coverage units in a group of insurance contracts is the quantity of benefits provided under the contracts in the group.

These benefits include:

- insurance coverage (coverage for an insured event);
- investment-related services (for insurance contracts with direct profit participation): concerns the management of underlying items on behalf of the policyholder; and
- investment-return services (for insurance contracts with no direct profit participation).

The amount recognised in profit or loss is based on the number of coverage units in a group. This number is determined by considering for each contract the quantity of the benefits provided under the contract and its expected coverage period. The coverage units are reviewed once a year and adjusted if necessary.

# Basis for determining the coverage units

Property and casualty insurance products	
	Premiums written adjusted for inflation
Health insurance products	
	Number of existing insurance contracts
	adjusted for inflation and weighted by annual net premiums
Life insurance products	
Endowment assurance	Sum insured
Risk insurance	Sum insured
Unit-linked and index-linked life insurance	Sum insured
	Liability for remaining coverage for investment services and
Pension insurance	pension for insurance benefits
Insurance contracts with participation features	Liability for remaining coverage except for pensions
Reinsurance	
	Reinsurance premiums

For unit-linked and index-linked life insurance, the sum insured represents both insurance benefits and investment benefits – the risk portion is allocated to insurance benefits, while the liability for remaining coverage is allocated to investment benefits.

The time value of money is taken into account when determining the coverage units in life insurance.

The risk mitigation option in accordance with IFRS 17.B115 is not utilised.

# **Investment component**

For the identification of investment components, the amount is to be determined that an insurance contract requires UNIQA to repay to a policyholder in all circumstances, regardless of whether an insured event occurs. Investment components may not be recognised in either insurance revenue or insurance service expenses.

In life insurance, the investment component within the coverage period is calculated from the lower of the surrender value and the amount contractually agreed for the insurance benefit. At the end of the coverage period, the investment component is calculated using the maturity benefit.

# Applicable accounting policies

Insurance contracts are contracts under which a significant insurance risk is assumed. Investment contracts are contracts that do not transfer a significant insurance risk and that do not include discretionary participation features. They fall under the scope of IFRS 9 (Financial Instruments).

UNIQA holds both inward and outward reinsurance contracts. The carrying amount of the portfolios from inward reinsurance contracts (assumed reinsurance) is shown together with the carrying amount of the primary insurance contract portfolios.

Insurance contracts can be divided into contracts with direct profit participation and contracts without profit participation. Insurance contracts with direct profit participation are those for which, at inception:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the entity expects to pay to the policyholder an amount equal to a substantial share of the fair value returns on the underlying items; and
- the entity expects a substantial proportion of any change in the amounts to be paid to the policyholder to vary with the changes in fair value of the underlying items.

For insurance contracts that meet the aforementioned criteria, the variable fee approach is mandatory. Whether the aforementioned criteria are met is assessed at inception of the contract and may not be reassessed at a later date unless the contract is modified. In addition, the variable fee approach is applied in the long-term business of health insurance as well as in unit- and index-linked life insurance.

All other insurance contracts and reinsurance contracts held are classified as insurance contracts without direct profit participation features and accordingly measured using the general measurement model or, if the conditions are met, the premium allocation approach.

# Measurement unit and recognition

#### **Insurance contracts**

Insurance contracts are aggregated into groups for measurement purposes. A group of insurance contracts is determined by identifying portfolios of insurance contracts subject to similar risks and managed together. The defined portfolios are subdivided as follows:

- a group of contracts that are onerous at initial recognition;
- a group of contracts that at initial recognition have no significant possibility of becoming onerous subsequently; and
- a group of the remaining contracts in the portfolio.

The aforementioned groups are further subdivided by underwriting years, as only contracts sold within one year may be included in the same group.

In respect of the obligation to form annual cohorts, which prevents contracts issued more than one year apart from each other from being included together in a group of insurance contracts, an option was established as part of the adoption of IFRS 17 into EU law. According to this option, the European Commission allows users in the EU to not apply the requirement under IFRS 17.22 for certain contracts. UNIQA will make use of this option and apply it in connection with participating contracts. For these contracts, new business is presented in the cohort of the transition date.

Primary insurance contracts and inwards reinsurance contracts are recognised at the earliest of the following dates:

- the beginning of the coverage period of the group of contracts;
- the date when the first payment from a policyholder in the group becomes due; or
- at the time it involves a loss for the group.

The group of insurance contracts is determined on initial recognition and the composition of the groups may not be reassessed subsequently. If the recognition criteria are met, the contract is allocated to an existing group of insurance contracts or, if the contract may not be allocated to the existing groups, a new group is formed.

#### Reinsurance contracts held

The grouping of reinsurance contracts held (outward reinsurance) is based on the same principles as for primary insurance, with the exception that reinsurance contracts cannot be onerous.

A group of reinsurance contracts must be recognised at the following dates:

- proportional reinsurance contracts: at the time of initial recognition of any underlying insurance contract;
- non-proportional reinsurance contracts: at the beginning of the coverage period of the group. However, if a group of onerous underlying insurance contracts is recognised, recognition is at that date, provided the related reinsurance contract was in force at or before that date.

Reinsurance contracts in property and casualty insurance are mostly non-proportional contracts.

The separation between assets and liabilities from insurance and reinsurance contracts is carried out in accordance with IFRS 17.78, which stipulates that portfolios of insurance and reinsurance contracts that are assets must be recognised separately from those that are liabilities.

#### **Acquisition cash flows**

Acquisition cash flows are allocated to the groups of insurance contracts using a systematic method if direct allocation to the group is possible, otherwise this takes place at portfolio level. In order to take account of changes in assumptions, the inputs for the allocation method used are reviewed at the end of each reporting period.

When applying the premium allocation approach, the option of recognising acquisition cash flows in the income statement for insurance contracts with a term of up to one year is not exercised.

#### **Contract boundaries**

All the future cash flows within the boundary of each contract in the group are included in the measurement of a group of insurance contracts. Whether the cash flows are within the contractual limit is determined as follows:

### Insurance contracts (including assumed reinsurance)

Cash flows are within the boundary of an insurance contract if they arise from substantive rights and obligations that exist during the reporting period in which the policyholder is compelled to pay the premiums or in which UNIQA has a substantive obligation to provide the policyholder with insurance contract services.

A substantive obligation to provide insurance contract services ends when:

- UNIQA has the practical ability to reassess the risks of the particular policyholder and, as a result, can set a price or level of benefits that fully reflects those risks; or
- if these criteria are not met for an individual contract but are met for a portfolio and the pricing of the premiums for the coverage period to date does not take into account the risks that relate to future periods.

#### **Reinsurance contracts**

Cash flows are within the contract boundaries if they arise from substantive rights and obligations that exist during the reporting period in which UNIQA is compelled to make payments to the reinsurer or in which UNIQA has the right to receive services from the reinsurer.

The right to receive services from the reinsurer ends when:

- the reinsurer has the practical ability to reassess the risk assumed and is able as a result to set a price or benefit level that fully reflects those risks, or
- has a substantive right to cancel the coverage.

The contract limits are reassessed at the end of each reporting period.

#### Measurement

# Contracts that are not measured using the premium allocation approach

#### Insurance contracts - initial measurement

UNIQA measures a group of insurance contracts at initial recognition as the sum of the fulfilment cash flows and the contractual service margin. The fulfilment cash flows include estimates of future cash flows, an adjustment reflecting the time value of money and financial risks, and a risk adjustment for non-financial risk.

The risk adjustment for non-financial risk is derived separately from the other estimates and represents the compensation for bearing the uncertainty about the amount and timing of the cash flows that arises from non-financial risk.

The contractual service margin for a group of insurance contracts depicts the unearned profit that UNIQA will generate with the future provision of services. If there is a net cash inflow on initial recognition, a contractual service margin is recognised in order to avoid profit recognition. The fulfilment cash flows are offset by the recognition of the contractual service margin, thereby resulting in a provision for future policy benefits of zero on initial recognition.

If there is a net outflow of funds, the contracts are onerous. This amount is recognised in the income statement and reported as a loss component within the liability for remaining coverage. The reversal of the loss component is recognised as a reduction in expenses in the item "insurance service expenses".

The determinations under the initial recognition also apply to the variable fee approach. The differences between the general measurement model and the variable fee approach only arise in the subsequent measurement and relate to the roll-forward of the contractual service margin and the determination of the technical financial result.

#### Insurance contracts - subsequent measurement

Since UNIQA also prepares interim financial statements applying IAS 34, the accounting option regarding the treatment of accounting estimates made in interim financial statements must be observed. An entity has an accounting option to change the treatment of accounting estimates made in previous interim financial statements when applying IFRS 17 in subsequent interim financial statements and in the annual reporting period. UNIQA applies the year-to-date approach, i.e. the treatment of accounting estimates in previous interim financial statements is changed and thus the annual result is not affected by estimates in interim financial statements.

The measurement of the fulfilment cash flows is based on current estimates of future cash flows, current discount rates and current estimates of the risk adjustment for non-financial risks at each reporting date. The change in fulfilment cash flows is recognised as follows:

• The contractual service margin is adjusted in the event of any changes in connection with future benefits. If the fulfilment cash flows increase then the contractual service margin is reduced; if they decrease then the contractual service margin is increased. If an increase in the fulfilment cash flows exceeds the amount of the contractual service margin, this is reversed in full and the excess amount is recognised as a loss in the insurance service expenses. If the fulfilment cash flows are subsequently reduced, this is recognised as income in the technical result until the accumulated losses have been recovered. A contractual service margin is again created for the excess.

- Any change that is in connection with current and past benefits is recognised in the income statement under insurance service expenses.
- Effects of changes in connection with financial assumptions are recognised through profit or loss under insurance finance income or, in cases where the OCI option is applied, divided between insurance finance income and other comprehensive income.

The contractual service margin for a group of contracts measured using the **general measurement model** is calculated as of the end of the financial year from the opening balance adjusted by:

- the contractual service margin for new contracts;
- the interest accreted on the carrying amount of the contractual service margin during the reporting period (applying the discount rate determined at the date of initial recognition);
- the changes in fulfilment cash flows relating to future service;
- the effect of any currency exchange differences; and
- the amount recognised as insurance revenue due to the provision of benefits.

The aforementioned changes in fulfilment cash flows relating to future benefits include:

- experience adjustments arising from premiums received in the period that relate to future service, and related cash flows (such as insurance acquisition cash flows);
- changes in estimates of the present value of the future cash flows in the liability for remaining coverage, except for the fair value of the money and the financial risk;
- deviations with regard to the investment component in life insurance:
- changes in the risk adjustment for non-financial risk that relate to future service.

Because a change in discretionary cash flows is considered as a future service, an adjustment is made to the contractual service margin.

For insurance contracts measured using the **variable fee approach**, there are differences in the subsequent measurement of the contractual service margin compared to the general measurement model.

A contract with direct participation features exists if UNIQA has the obligation to pay the policyholder an amount equal to the fair value of the underlying items as well as a variable fee that is retained in exchange for the future service provided by the insurance contract. The variable fee comprises the share to which UNIQA is entitled depending on the varying underlying items.

The contractual service margin for a group of contracts measured using the **variable fee approach** is calculated as of the end of the financial year from the opening balance adjusted by:

- the contractual service margin of any new contracts;
- the change in the amount of UNIQA's share of the fair value of the underlying items unless the decrease in the amount of the company's share exceeds the carrying amount of the contractual service margin and a loss component would therefore have to be recognised or adjusted;
- the changes in the fulfilment cash flows relating to future service unless the increase in the fulfilment cash flows would exceed the carrying amount of the contractual service margin and therefore a loss component would have to be recognised or adjusted;
- the effect of any currency exchange differences; and
- the amount recognised as insurance revenue because of the transfer of insurance contract services.

The components to be considered in determining the changes in the fulfilment cash flows related to future service are the same as in the general measurement model, but are measured using current discount rates, and also include the change in the effect of the time value of money and financial risks not arising from the underlying items.

# Loss component

Once a loss is recognised for onerous insurance contracts and a loss component is formed within the provision for future policy benefits, future changes in the fulfilment cash flows must be allocated systematically to the loss component of the liability for remaining coverage as well as to the liability for remaining coverage with no loss component as part of the subsequent measurement.

Changes in the fulfilment cash flows that must be taken into account in the systematic allocation:

- estimated value of the present value of future cash flows for claims and expenses that are eliminated from the liability for remaining coverage due to insurance service expenses;
- changes in the risk adjustment for non-financial risk recognised in profit or loss because of the release from risk;
   and
- insurance finance income or expenses.

The systematic allocation is calculated as the share of the loss component divided by the present value of future cash outflows plus the risk adjustment for non-financial risk. In addition, the variable fee approach takes into account the company's share of the change in the fair values of the underlying items divided by the expected claims and expenses.

Systematic allocation means that the total amounts allocated to the loss component at the end of the term (coverage period) of a group of contracts is equal to zero.

Any subsequent decreases in the fulfilment cash flows due to changes in the estimated future cash flows relating to future service as well as any subsequent increases in the company's share of the fair value of the underlying items do not result in a split between the liability for remaining coverage with a loss component and the liability for remaining coverage without a loss component. An allocation to the loss component must only be made until this has been reduced to zero.

### Reinsurance contracts held

The general measurement model is applied to measure the reinsurance ceded, albeit with some modifications.

# Initial measurement

Assumptions that are consistent with those of the underlying insurance contracts are used to measure the present value of the estimated future cash flows for the group of reinsurance contracts held. The reinsurer's default risk is also taken into account, including the effects of collateral and losses from disputes. The default risk is assessed as at each reporting date and any changes are recognised in the income statement.

An amount corresponding to the amount of risk being transferred to the reinsurer is recognised as the risk adjustment for non-financial risk.

The requirements for calculating the contractual service margin as part of initial recognition are modified to take account of the fact that there is no unrealised gain on a group of reinsurance contracts held, but rather a net cost or net gain on the acquisition of the reinsurance.

At the time of initial recognition therefore, the contractual service margin represents any net costs or net gains, which are measured as follows:

- fulfilment cash flows.
- the amount of assets or liabilities recognised in previous periods that is derecognised as at that date,
- any cash flows that occur at the time of the initial recognition,
- gains from the recognition of any loss-recovery component;
- however, if the net costs relate to insured events prior to the acquisition of the group of reinsurance contracts held, these costs are recognised immediately as an expense.

#### Subsequent measurement

The carrying amount of the contractual service margin at the end of the reporting period is measured as the carrying amount determined at the start of the reporting period, adjusted for:

- the effects of any new contracts added to the group;
- interest accreted on the carrying amount of the contractual service margin, measured at historical interest rates;
- realisation of income from the coverage of onerous primary insurance contracts (loss-recovery component);
- reversal of the loss-recovery component, provided that this reversal does not relate to changes in the fulfilment cash flows for the group of reinsurance contracts held;

- changes in the fulfilment cash flows, measured at the discount rates applicable on initial recognition, to the extent that the change relates to future service unless the change results from a change in the fulfilment cash flows from onerous primary insurance contracts;
- effects of any exchange rate differences on the contractual service margin;
- release of the contractual service margin recognised in profit or loss due to the benefits received in the period.

A loss-recovery component can only be recognised if the reinsurance contract held is concluded at the same time as or before the recognition of the underlying onerous insurance contracts. The amount for the loss-recovery component, which adjusts the contractual service margin and is recognised in profit or loss, is determined as follows:

Multiplying the reported profit or loss from the underlying insurance contracts by the percentage of claims on the underlying insurance contracts that are expected to be reimbursed by the reinsurer.

# Contracts measured using the premium allocation approach

The measurement is based on the premium allocation approach if the following criteria are met:

- if the coverage period of each contract in the group is one year or less (taking the specific contract boundaries into account); or
- if it can be expected that the measurement of the liability for remaining coverage would not differ materially from the one that would be produced applying the general measurement model. This is not the case if significant variability in the fulfilment cash flows is expected when a group is initially recognised, which would influence the measurement of the liability for remaining coverage during the period before a loss occurs.

These criteria apply predominantly in the area of property and casualty insurance. If the criteria are not met, the general measurement model is used. For contracts with an average term of one to three years, the premium allocation approach is applied. This approach was derived from sensitivity analyses by comparing the amount of the liability for remaining coverage calculated using the general measurement model and the premium allocation approach.

For contracts with an average term of more than three years, an estimate must be made regarding the stability of the liability for remaining coverage. This assessment is based on a calculation model in which non-financial assumptions (risk adjustment for non-financial risks, costs, loss ratio and lapse probability) and financial assumptions (interest rate) are stressed after one year. The deviation of the liability for remaining coverage between each stressed scenario and the basic scenario is compared with a defined threshold value.

The reinsurance contracts in property and casualty insurance are measured in their entirety using the premium allocation approach for the following reasons:

- the majority of reinsurance contracts are based on claim years with a duration of one year; and
- a concept was created for contracts based on the subscription year which addresses the contract term and the variability of the fulfilment cash flows. All contracts have an average term of up to three years.

In health insurance, there are only one-year reinsurance contracts, which is why measurement using the premium allocation approach is permissible.

Reinsurance contracts in life insurance are measured according to the premium allocation approach if the contracts have a contract limit of up to one year and the coverage period is also up to one year.

For the initial recognition of insurance and reinsurance contracts measured using the premium allocation approach, the carrying amount of the liability for remaining coverage corresponds to the premiums received minus the insurance acquisition cash flows.

As part of the subsequent measurement of insurance and reinsurance contracts measured using the premium allocation approach, the carrying amount of the liability for remaining coverage is increased by the premiums received in the period and the amortisation of acquisition cash flows. This is offset by a reduction in the carrying amount due to the insurance benefits provided in the reporting

period (recognised as insurance revenue) and from acquisition cash flows in the reporting period. The liability for remaining coverage is not discounted as the contracts do not contain any significant financing components.

The liability for remaining coverage is increased through profit or loss following a determination during the coverage period that a group of contracts is onerous. The loss to be recognised results from the difference between the liability for remaining coverage measured using the premium allocation approach and the (discounted) fulfilment cash flows determined using the general measurement approach, which relates to future insurance coverage.

In the case of prepayments of premiums by the policy-holder, a financing component is calculated and recognised separately from the technical result. This means that fair value effects are taken into account when determining the technical provisions.

The liability for incurred claims is measured at the value of the fulfilment cash flows in relation to the claims incurred. The estimated values of future cash flows are discounted.

#### Reinsurance contracts held

The same accounting methods are generally used for the measurement of reinsurance contracts as for primary insurance contracts.

If onerous groups of insurance contracts in primary insurance are covered by reinsurance business ceded, a loss-recovery component is recognised and the carrying amount of the liability for remaining coverage from reinsurance is adjusted.

# **Derecognition of insurance contracts**

Insurance contracts are derecognised if the obligation specified in the insurance contract has expired, been satisfied or cancelled. They are also derecognised in the event of changes to the contract in the following cases:

 The modified contract terms would have meant that at initial recognition:

- the modified contract would not have fallen within the scope of IFRS 17;
- various components would have had to be separated from the host insurance contract, resulting in a different insurance contract;
- the modified contract would have had a substantially different contract boundary; or
- the modified contract would have been included in another group of contracts.
- There is a change in the contract category with or without direct participation features.
- The criteria for applying the premium allocation approach are no longer met as a result of the contract modifications.

For contract modifications that do not result in derecognition, the changes in cash flows are treated as changes in estimated fulfilment cash flows. The exercise of a right provided for in the contractual conditions does not constitute an adjustment to the contractual conditions.

#### Recognition

Disclosures in the consolidated statement of financial position are made at portfolio level. The carrying amounts of the portfolios, depending on whether they represent an asset or a liability, are added up and accordingly disclosed separately. These disclosure criteria must also be applied to the reinsurance contracts held, which must also be reported separately from primary insurance. The respective carrying amounts of inwards reinsurance are included in primary insurance.

The amounts recognised in the consolidated income statement and other comprehensive income are to be disaggregated into an insurance service result, comprising insurance revenue and insurance service expenses, and insurance finance income or expenses. Investment components may not be recognised in either insurance revenue or insurance service expenses.

The balances of reinsurance held must also be recognised separately from the amounts of primary insurance in the income statement and in other comprehensive income. In contrast to primary insurance, there is an option to report the insurance service result for the reinsurance as a single amount. UNIQA makes use of this option.

All the changes in the risk adjustment of non-financial risk can be shown in the insurance service result. The changes do not need to be broken down into a technical result and a technical financial result. UNIQA makes use of this option.

# Insurance revenue: Contracts that are not measured using the premium allocation approach

Insurance revenue represents the amount of consideration for the provision of services under insurance contracts and represents the change in liability for remaining coverage. The expected consideration should cover the following items:

- The losses expected for the reporting period at the beginning of the year and the costs allocated to the contracts. Amounts allocated to the loss component of the liability for remaining coverage, repayments of investment components, insurance acquisition cash flows and transaction-based taxes collected on behalf of third parties (e.g. insurance tax) are excluded from this.
- The change in the risk adjustment for non-financial risks. This does not include changes that relate to future service (adjustment of the contractual service margin), or amounts allocated to the loss component of the liability for remaining coverage.
- Amount of the contractual service margin recognised in profit or loss for the services provided in the period.
- Experience adjustments for premium receipts that relate to current and past service.
- The part of the premium which relates to the offsetting of acquisition cash flows. The allocation is made pro rata temporis to the reporting period to be allocated. Assuming that insurance contracts are priced in such a way that the insurance acquisition cash flows are earned back, the same amount is also recognised as insurance service expenses.

# Insurance revenue: Contracts measured using the premium allocation approach

Under the premium allocation approach, the insurance revenue for a period corresponds to the amount of premium revenues expected for the period. To allocate the service provided under the insurance contract to the current period, the expected premium revenues are allocated on the basis of the passage of time.

## Insurance service expenses

Insurance service expenses are recognised in the income statement as soon as they are incurred and include:

- incurred claims and other incurred insurance service expenses,
- amortisation of the acquisition cash flows,
- loss component and the reversal of this loss component,
- adjustments to the provisions for unsettled claims (excluding those adjustments from discounting),
- insurance service expenses may not include any investment components.

#### Insurance service result from reinsurance held

The insurance service result includes the amounts reimbursed by the reinsurer, the premiums allocated to the period, and any gains or losses from the change in the loss-recovery component.

#### Technical financial result

Changes in the carrying amount resulting from the effect of changes in the time value of money and financial risk must be reported under insurance finance income or expenses.

Insurance finance income or expenses also includes changes in the underlying items.

For both the general measurement model and the variable fee approach, the OCI option in accordance with IFRS 17.88(b) is applied where the respective allocated financial instruments on the asset side are also measured through other comprehensive income. This option is

exercised at the level of the portfolio of insurance contracts. The amounts not recognised in other comprehensive income are determined by systematic allocation over the term of the group of insurance contracts and recognised in the income statement.

The discount rate ("locked-in yield curve") determined at initial recognition is applied for contracts measured according to the general measurement model and the premium allocation approach.

For contracts measured using the general measurement model and for which changes in the assumptions related to financial risks have a substantial effect on the amounts paid to policyholders, the allocation is made on the basis of a constant rate over the remaining duration of the group of contracts.

For contracts measured using the variable fee approach, the amounts recognised in the income statement correspond to the amount recognised in profit or loss for the underlying reference values.

The tables below show the changes in net assets and liabilities from insurance contracts. After the presentation of the change in the liability for remaining coverage and the liability for incurred claims from primary insurance and reinsurance, the change in the measurement components of contracts that are not measured using the premium allocation approach is presented for primary insurance and reinsurance contracts.

In order to enable a reconciliation to the status as at 31 December 2023, the shares of the income statement attributable to the discontinued operation are included in the following tables. A reconciliation to the consolidated income statement is not possible for individual items, as the shares attributable to the discontinued operation are not included in the consolidated income statement for the comparative period in accordance with the provisions of IFRS 5.

The following table shows the insurance revenue per business line and broken down into contracts that are measured according to the premium allocation approach and those that are not measured in accordance with the premium allocation approach.

### 4. OTHER NON-CURRENT ASSETS

# 4.1 Property, plant and equipment

Property, plant and equipment are generally accounted for using the cost model.

Gains on the disposal of property, plant and equipment are recorded under the item "Other non-technical income", while losses are recorded under "Other non-technical expenses".

If the use of a property changes and an owner-occupied property becomes an investment property, the property is reclassified as investment land and buildings with the carrying amount at the date of the change.

Property, plant and equipment are depreciated on a straight line basis over a useful life for buildings of 15 to 80 years and for technical systems and operating and office equipment of 2 to 20 years. Depreciation methods, useful lives and residual values are reviewed on every reporting date and adjusted if necessary. Depreciation of property, plant and equipment is recognised in profit/(loss) for the period after cost sharing in the technical result and other non-insurance service expenses.

In accordance with IAS 16.29A, the land and buildings that represent underlying items in life and health insurance with participation features are measured at fair value. Investment property is measured using the same model.

#### Leases

There are around 2,100 contracts throughout the entire Group which fall within the scope of the standard and for which UNIQA is lessee. Nearly all contracts are simple standard contracts. These relate mainly to land and buildings and vehicles and partly to office furniture and equipment. A significant portion of the capitalised usage rights consists of a small number of contracts concluded for an indefinite period for which estimates had to be made regarding their duration and the exercise of termination options. The terms on which the calculation of these contracts is based are up to 48 years. The average term of the remaining contracts is between three and five years.

The discount rate used to determine the liability consists of the risk-free interest rate adjusted for country risk, creditworthiness and a repayment factor.

Leases with a contractual term of less than twelve months and low value assets were not recognised. Leases where the underlying asset value does not exceed a new value of €5 thousand and those with a contract term of less than twelve months were not recognised.

Cash outflows for leases	-19,457	-15,552

# 4.2 Intangible assets

#### Goodwill

### Ascertainment and allocation of goodwill

For the purposes of the impairment test, goodwill was allocated to the following cash-generating units (CGUs), which correspond to the countries in which UNIQA operates. Exceptions to this relate to the SIGAL Group, in which the three countries Albania, Kosovo and North Macedonia were combined into one CGU due to their similar development and organisational links, and the Telemedi Group, which has its registered office in Poland but is not a joint CGU with the insurance group in Poland:

- UNIQA Austria
- Albania/Kosovo/North Macedonia as subgroup of the SIGAL Group
- Bulgaria
- Poland
- Telemedi Group
- Czechia
- Hungary

# Goodwill by CGU In € thousand

31/12/2024 31/12/2023

Albania/Kosovo/North Macedonia as subgroup of		
the SIGAL Group	0	20,973
Bulgaria	5,411	5,411
Poland	44,662	43,998
Telemedi Group	10,261	10,108
Czechia	229,288	233,647
Hungary	13,000	13,970
UNIQA Austria	37,737	37,737
Other	3,522	2,386
Total	343,880	368,229

The goodwill allocated to the SIGAL Group CGU was reclassified to assets in disposal groups held for sale.

### Impairment test for goodwill

The impairment test was performed during the preparation of the financial statements. In order to test the impairment for goodwill, the recoverable amount of the CGUs is determined. Impairment is recognised when the recoverable amount of a CGU is less than its value to be covered, consisting of goodwill and the proportional net assets. Impairment losses on goodwill are recognised in the profit/(loss) for the period under "Amortisation of VBI and impairment of goodwill".

# $\label{lem:potential} \textbf{Determination of the recoverable amount-significant} \\ \textbf{estimates}$

The recoverable amount of the CGUs with goodwill allocated is calculated on the basis of value in use by applying generally accepted measurement principles by means of the dividend discount method. The budget projections (detailed planning phase) of the CGUs, the estimate of the long-term net profits achievable by the CGUs and long-term growth rates (perpetuity) are used as the starting point for determination of the capitalised value.

The capitalised value is determined by discounting the future profits with a suitable capitalisation rate after assumed retention to strengthen the capital base. In the process, the capitalised values are separated by the three business lines, which are then totalled to yield the value for the CGU.

# Cash flow forecast (multi-phase model)

Phase 1: Five-year company planning

The detailed company planning generally encompasses a period of five years. The company plans used for the calculation are the result of a structured and standardised management dialogue. This includes an integrated reporting and documentation process and takes into account empirical values from previous planning periods as well as UNIQA's sustainability strategy and associated climate-related aspects. The plans are formally approved by the Group Management Board and also include material assumptions regarding the combined ratio, capital earnings, market shares and the like.

### Phase 2: perpetuity growth rate

The last year of the detailed planning phase is used as the basis for determining cash flows in phase 2. The perpetuity growth rate is based on medium-term growth forecasts of the respective national economy. The underlying growth assumptions depend on the geographical location and range from 1 to 3 per cent. Various studies and statistical analyses were used as sources to provide a basis for determining the growth rates in order to consistently and realistically reflect the market situation and macroeconomic development. The reference sources include our own research, as well as country risks, growth rate estimations and multiples published by Damodaran (NYU Stern).

#### Determining the capitalisation rate

The assumptions with regard to risk-free interest rate, market risk premium and business line betas made for determining the capitalisation rate are consistent with the parameters used in the UNIQA planning and controlling process. They are based on the capital asset pricing model.

In order to depict the economic situation of income values as accurately as possible, considering the volatility on the markets, the capitalisation rate was calculated as follows: A uniform risk-free interest rate according to the Svensson method (a 30-year spot rate of German federal bonds) was used as a base interest rate.

The beta factor was determined on the basis of the monthly betas over the last ten years for a defined peer group. The betas for the non-life, life and health insurance business lines were determined using the revenues in the relevant business lines of the individual peer group companies. The health insurance business line, which is strongly focused on the Austrian market, is operated in a manner similar to life insurance. A uniform beta factor for personal insurance is therefore used in relation to the health and life business lines.

In Austrian measurement practice, the market risk premium is derived at the reporting date from the implied market return based on capital market data. The growth factor is derived in the same manner as the growth in the profit from ordinary activities in the impairment test.

An additional country risk premium was defined in accordance with Professor Damodaran's models. The country risk premium in accordance with the Damodaran method is calculated as follows: The spread of credit default swap spreads (CDS spreads) in a rating class of "riskfree" US government bonds is determined starting from the rating of the country concerned (Moody's). Then the spread is adjusted by the amount of the volatility difference between equity and bond markets.

The calculation also factored in the inflation differential for countries outside the eurozone. In general, the inflation differential represents inflation trends in different countries and is used as a key indicator in assessing competitiveness. In order to calculate the inflation differential, the deviation of the inflation forecast for the country of the CGU in question in relation to the inflation forecast for a risk-free environment (Germany, in this case) was used. This is adjusted annually in the detailed planning by the expected inflation, and is subsequently applied for perpetuity with the value of the last year of the detailed planning phase.

The sale of the SIGAL Group was agreed in November 2024. As the goodwill is covered by the agreed purchase price, it did not undergo an additional test for impairment in the financial year.

### Capitalisation rate 2024

Capitalisation rate 2024		Discount factor	Discount factor perpetuity	
In per cent	Property/ casualty	Life & health	Property/ casualty	Life & health
Bulgaria	10.8	11.0	10.2	10.4
Austria	8.8	9.0	8.8	9.0
Poland	11.8	12.1	9.8	10.1

Bulgaria	10.0	10.3	10.5	10.8
Austria	8.7	8.7	8.7	8.7
Poland	12.3	12.6	9.9	10.2
Czechia	10.1	10.4	9.0	9.3
Hungary	14.0	14.3	12.0	12.3

<sup>1)</sup> The discount rate ranges listed for the SIGAL Group relate to the spread over the respective countries grouped under these headings.

# Sensitivity analyses

Sensitivity analyses with regard to the capitalisation rate and the main value drivers are performed in order to substantiate the results of the calculation and estimation of the value in use.

These analyses show that sustained surpluses on the part of the individual CGUs are highly dependent on the actual development of these assumptions within the individual national or regional economies (GDP, insurance density, purchasing power parities particularly in the CEE markets) as well as the associated implementation of the individual profit goals. The greatest uncertainty with regard to the forecasts and the associated assessment of the future market situation is due to the further impact of the war in Ukraine and of future interest rate developments.

In the event that the insurance markets develop very differently from the assumptions made in those business plans and forecasts, impairment losses may have to be recognised on the goodwill carried.

A sensitivity analysis shows that only a combination of an interest rate increase of 100 bps and a simultaneous change in cash flows of -10 per cent would result in a shortfall in the value in use of €44.5 million for the CGU Poland and €15.6 million for the CGU Czechia. A change in only one of these two parameters does not result in a shortfall in the value in use.

#### Other intangible assets

Other intangible assets include both purchased and internally developed software, which is depreciated on a straight-line basis over its useful economic life of 2 to 20 years.

Costs that are incurred at the research stage for internally developed software are recognised through profit or loss for the period in which they were incurred. Costs that are incurred in the development phase are deferred provided that it is foreseeable that the software will be completed, there is the intention and ability for future internal use, and this will result in a future economic benefit.

The amortisation of other intangible assets is reported in the profit/(loss) for the period after cost sharing in the technical result and other non-insurance service expenses.

#### Measurement of non-financial assets

The carrying amounts of non-financial assets – excluding deferred tax assets – are reviewed at every reporting date to determine whether there is an indication for impairment. If this is the case, the recoverable amount of the asset is estimated. The goodwill and intangible assets under development are tested for impairment when a triggering event occurs. If there is none, an annual test is done.

Impairment losses on goodwill are not reversed. In the case of other assets, an impairment loss is reversed only to the extent that it does not increase the carrying amount of the asset above the carrying amount that would have been determined net of depreciation or amortisation had no impairment loss been recognised.

# Portfolio values and non-insurance deferred acquisition costs

The values of life, property and casualty insurance policies in accordance with IFRS 17 as well as pension fund contracts relate to expected future margins from purchased operations. They are recognised at their fair value at the acquisition date. The redemption of the current value of business in force follows the progression of the estimated gross margins. The amortisation of the value of business in force is recognised in the profit/(loss) for the period under "Amortisation of VBI and impairment of goodwill".

Deferred acquisition costs not related to contracts are accounted for in accordance with IFRS 15. These are essentially contracts for the management of pension and investment funds. They recognise costs that would not have been incurred if the contract had not been concluded. The amortisation is carried out pro rata temporis over the term of the underlying contracts.

# 5.2 Cash

Cash in foreign currencies is measured at the exchange rate in effect on the reporting date. The cash and cash equivalents in the Consolidated Statement of Cash Flows correspond to the item "Cash and cash equivalents" in the consolidated balance sheet.

# 5.3 Assets and liabilities held for sale and discontinued operations

#### Sale of Raiffeisen Life

The sale of the 75 per cent stake in the Limited Liability Company "Insurance Company Raiffeisen Life" (Russia, Moscow; "Raiffeisen Life") decided at the Supervisory Board meeting on 23 August 2023 was completed on 4 October 2024. The assets and liabilities that were stated by the closing date under the item "Assets and liabilities in disposal groups held for sale" were derecognised accordingly.

The profit and loss of the discontinued operation is presented in the consolidated income statement under the item "Profit/(loss) from discontinued operations (after tax)" and was previously reported in the UNIQA International segment. The profit/(loss) from discontinued operations includes the current result received by UNIQA by 4 October 2024, costs to sell of €700 thousand (2023: €216 thousand).

# Sale of the SIGAL Group

At the Supervisory Board meeting on 21 November 2024, UNIQA Insurance Group AG decided to sell the shares held in SIGAL UNIQA Group AUSTRIA sh.a. (Albania, Tirana) together with the equity investments held by it as listed below, to the founder and minority shareholder Avni Ponari:

- SIGAL LIFE UNIQA Group AUSTRIA sh.a (Albania, Tirana)
- SIGAL UNIQA Group AUSTRIA sh.a. (Kosovo, Pristina)
- SIGAL LIFE UNIQA Group AUSTRIA sh.a (Kosovo, Pristina)
- UNIQA AD Skopje (North Macedonia, Skopje)
- UNIQA Life AD Skopje (North Macedonia, Skopje)

A decision was also taken at the same time to exercise the existing option agreement to acquire a further 3.07 per cent of the shares with the other minority shareholder. Following the acquisition of these shares, 90 per cent of the shares in SIGAL UNIQA Group AUSTRIA sh.a. will be sold. The existing option agreement with the minority shareholder Avni Ponari was suspended with the signing of the sale agreement and will be cancelled once the sale is completed.

The expected sales price is around €66,500 thousand. The sale is expected to be completed in the second quarter of 2025 once all the necessary regulatory approvals have been obtained.

The assets and liabilities are recognised in the consolidated balance sheet under assets and liabilities in disposal groups held for sale. The SIGAL Group does not constitute a business line in accordance with IFRS 5 and is therefore not recognised in the profit/(loss) from discontinued operations.

#### 6. TAXES

# 6.1 Income tax

Dme tax 1–12/20241-	-12/2023
74,563	28,981
26,097	8,713
-6,977	65,543
93,684	103,236
	74,563 26,097 -6,977

An expected Group tax rate of 23 per cent (2023: 24 per cent) was generally applied in all segments. A corporate income tax rate of 23 per cent has been applicable in Austria since 1 January 2024. National tax regulations in conjunction with life insurance profit participation may lead to a different calculated income tax rate.

# **Group taxation**

In Austria, UNIQA exercises the option of forming a group of companies for tax purposes. There are two tax groups with the parent companies UNIQA Insurance Group AG and PremiQaMed Holding GmbH.

The group members are generally charged or relieved by the corporation tax amounts attributable to them by the parent groups through the distribution of their tax burden in the tax group. Losses from foreign group members are also included within the scope of taxable profits. The tax realisation for these losses is accompanied by a future tax obligation to pay income taxes at an unspecified point in time. A corresponding provision is therefore formed for future subsequent taxation of foreign losses.

# 6.2 Deferred taxes

The calculation of deferred taxes is based on the specific tax rates of each country, which were between 9 and 33 per cent in the financial year (2023: between 9 and 24 per cent).

The deferred tax assets and deferred tax liabilities stated in the consolidated statement of financial position performed as follows:

### Net deferred tax

In € thousand

At 1 January 2023	200,662
Changes recognised in profit/(loss)	-65,543
Changes recognised in other comprehensive income	-202,546
Changes due to changes in basis of consolidation	-3,135
Reclassifications held for sale	-1,422
Foreign exchange differences	65
At 31 December 2023	-71,918
At 1 January 2024	-71,918
Changes recognised in profit/(loss)	6,977
Changes recognised in other comprehensive income	22,787
Reclassifications held for sale	965
Foreign exchange differences	-1,204
At 31 December 2024	-42,393

Changes recognised in other comprehensive income relate essentially to measurements of financial instruments and insurance and reinsurance contracts as well as remeasurements of defined benefit obligations.

The differences between the tax carrying amounts and the carrying amounts in the IFRS consolidated statement of financial position have the following effect:

In € thousand

31/12/2024 31/12/2023

Technical items	93,602	89,939
Investments	247,758	333,565

Investments	125,597	96,070
Other items	230,435	289,951
Total	515,032	605,016
Netting effect	-382,054	-453,882
Total after netting	132,978	151,134
Net deferred tax	-42,393	-71,918

The temporary differences in connection with shares in subsidiaries and associates for which no deferred tax liabilities were recognised amounted to €1,900,151 thousand (2023: €1,741,860 thousand).

An assessment of the ability to realise deferred tax assets for tax losses not yet used, tax credits not yet used and deductible temporary differences requires an estimate of the amount of future taxable profits. The resulting forecasts are based on business plans that are prepared, reviewed and approved using a uniform procedure throughout the company. Especially convincing evidence regarding the value and future chance of realisation of deferred tax assets is required under internal Group policies if the relevant Group company has suffered a loss in the current or a prior period.

The deferred tax assets presented include €27,501 thousand (2023: €2,816 thousand) attributable to tax loss carryforwards. Deferred tax assets from loss carryforwards in the amount of €111,963 thousand (2023 corrected: €125,081 thousand) were not recognised, as a realisation of these in the near future cannot be assumed, taking maturities into account.

The tax loss carryforwards of €640,729 thousand (2023: €598,912 thousand) are forfeited as follows, with "more than 5 years" also including tax loss carryforwards with no forfeit date of €538,210 thousand (2023: €460,086 thousand).

In € thousand

Bulgaria	0	155
Total	640,729	598,912

#### 6.3 Global minimum tax rate

As UNIQA's annual revenue exceeds the threshold of €750 million which is relevant for applying the global minimum tax rate, UNIQA is subject to the 15 per cent global minimum tax rates for corporate groups that went into effect 1 January 2024.

This results in an additional income tax expense of €500,000. The Safe Harbour Rules are satisfied in most of the countries in which UNIQA operates.

UNIQA is applying the exemption from recognising and disclosing deferred tax assets and deferred tax liabilities in connection with the global minimum tax.

### 7. OTHER PROVISIONS

In € thousand

31/12/2024 31/12/2023

Defined benefit obligations	385,298	423,043
Long-service provision	11,693	12,206
Other provisions	163,701	139,842
Total	560,693	575,090

# 7.1 Social capital

# 7.1.1 Defined benefit plans

The defined benefit obligations comprise individual contractual pension obligations, individual contractual bridge payments, and pension allowances in accordance with association recommendations.

The calculation is carried out annually using the projected unit credit method (PUC method). If the calculation results in a potential asset, the asset recognised is limited to the present value of any economic benefit available in the form of future refunds from the plan or reductions in future contributions to the plan. Any valid minimum funding requirements are included in the calculation of the present value of the economic benefit.

Remeasurement of net liabilities from defined benefit plans are recognised directly in other comprehensive income. The remeasurement includes the actuarial gains and losses, the income from plan assets (not including projected interest income) and the effect of any asset ceiling. The net interest expense (income) is calculated on the net defined benefit liability (asset) for the reporting period by applying the discount rate. The discount rate was used to measure the defined benefit obligation at the start of the annual reporting period. This discount rate is applied to net liabilities (assets) from defined benefit plans on this date. Any changes in net liabilities (assets) from defined benefit plans resulting from contribution and benefit payments over the course of the reporting period are taken into account. Net interest expenses and other expenses for defined benefit plans are recognised through profit or loss in profit/(loss) for the period.

If a plan's defined benefits are changed or a plan is curtailed, the resulting change in the benefit relating to past service costs or the gain or loss on the curtailment is recognised directly in profit/(loss) for the period. Gains and losses from the settlement of a defined benefit plan are recognised at the date of the settlement.

#### **Pension entitlements**

Individuals who have received an individual contractual agreement can generally claim a pension when they reach the age of 60 or 65, subject to certain conditions. The amount of the pension generally depends on the number of their years of service and their last salary before leaving their active employment. In the event of death, the spouse of the individual entitled to the claim receives a pension at 60 per cent, 50 per cent or 40 per cent depending on the policy. The pensions are suspended for any period in which a termination benefit is paid, and their value is generally guaranteed. The pensions that are based on individual policies or on association recommendations are financed through provisions. The final pension contribution which guarantees a fixed cash value for when the beneficiary begins their retirement is set aside during the contribution phase and transferred to the pension fund at the time of retirement. The financing is specified in the pension fund's business plan, in the works council agreement and in the pension fund contract.

### **Termination benefit entitlements**

In the case of employees of Austrian companies whose employment began prior to 31 December 2002 and has lasted three years without interruption and who have not switched voluntarily to a defined contribution scheme, the employee is entitled to termination benefits when the employment is terminated, unless the employee resigns, leaves without an important reason or is dismissed.

# 7.1.2 Defined contribution plans

Obligations for contributions to defined contribution plans are recognised as expenses through profit or loss as soon as the associated work is performed. Prepaid contributions are recognised as assets if an entitlement to refund or reduction of future payments arises. The defined contribution plan is financed largely by UNIQA.

# **Pension entitlements**

Board members, special policyholders and active employees in Austria are subject to a basic defined contribution pension fund scheme. The beneficiaries are also entitled to a final pension fund contribution which guarantees them a fixed cash value when they begin their retirement. Since the first pension to be paid out to the beneficiaries has a fixed benefit amount, this commitment is to be classified as a defined benefit in the contribution phase. The works council agreement states the extent to which a final pension fund contribution is provided to the beneficiary's individual assurance cover account in the event of a transfer to the old-age pension or of an incapacity to work or the death of a participant. UNIQA has no obligations during the benefit phase.

# Contributions to company pension funds

Under the defined contribution company pension scheme, the employer pays the fixed amounts into company pension funds. The contributions to the company pension funds amounted to €6,571 thousand (2023: €5,979 thousand). The employer has satisfied their obligation by making these contributions.

# 7.1.3 Employees

Personnel expenses In € thousand	1-12/20241-12/202

The presentation does not include the average number of salaried employees in the discontinued operation.

# 8. EQUITY

# 8.1 Subscribed capital and capital reserves

The share capital is comprised of 309,000,000 no-par value bearer shares. Capital reserves include unallocated capital reserves, which primarily result from share premiums.

A dividend in the amount of  $\[ \in \]$ 0.57 per share was paid on 19 June 2024. This corresponds with a distribution in the amount of  $\[ \in \]$ 174,970 thousand. Subject to the approval of the Annual General Meeting, a dividend payment in the amount of  $\[ \in \]$ 0.60 per share is planned for the financial year, which equates to a distribution in the amount of  $\[ \in \]$ 184.179 thousand.

# 8.2 Treasury shares

# Treasury shares

# **Authorisations of the Management Board**

In accordance with the resolution of the Annual General Meeting dated 3 June 2024, the Management Board is authorised to increase the company's share capital up to and including 30 June 2029 with the approval of the Supervisory Board by a total of up to €80,000,000 by issuing up to 80,000,000 no-par value bearer or registered shares in exchange for payment in cash or in kind, one time or several times.

In accordance with the resolution of the Annual General Meeting dated 6 June 2023, the Group Management Board was again authorised to acquire, with the approval of the Supervisory Board, treasury shares for a period of 30 months from 6 June 2023. The proportion of the share capital represented by newly acquired shares, together

with the proportion of other treasury shares that the company has already acquired and still holds, may not exceed 10 per cent of the share capital. The authorisation to acquire treasury shares also includes the acquisition of shares in the company by subsidiaries of the company.

The treasury shares held via UNIQA Österreich Versicherungen AG stem from the merger of BL Syndikat Beteiligungs Gesellschaft m.b.H., the transferor, with UNIQA Insurance Group AG, the transferee, in 2016. These shares held are not to be counted towards the 10 per cent limit.

# 8.3 Capital management

Capital management takes place with due regard to the regulatory and statutory requirements. Available own funds and risk capital requirements are defined and calculated in accordance with Delegated Regulation EU 2015/35 of 10 October 2014 for Solvency II requirements.

The eligible own funds comprise the consolidated Tier 1 capital, which essentially consisted of the subscribed share capital including the allocated share premium account and the reconciliation reserve. The Tier 2 capital consists entirely of subordinated liabilities. Tier 3 own fund items are mainly net deferred tax assets.

In the context of Group management, the appropriate coverage of the solvency capital requirement in accordance with Solvency II on a consolidated basis is constantly monitored. Active capital management is implemented in order to ensure that the individual Group companies and the Group as a whole have a reasonable capital base at all times. Aside from the five-year planning, another objective of active capital management is also to actively guarantee UNIQA's financial capacity, including under difficult economic conditions, in order to safeguard the continued existence of the insurance business.

In addition to the regulatory requirements to meet solvency capital/minimum capital requirements, UNIQA has also set itself a target capitalisation for the Group in the form of a solvency capital ratio – i.e. the eligible own funds in relation to the solvency capital requirement – of at least 180 per cent. The solvency capital ratio is managed using strategic measures which result in a reduction in the capital requirements and/or increase the amount of existing capital.

UNIQA also takes the potential impact on the rating by recognised rating agencies into account in the capital management process. Standard & Poor's (S&P) currently applies a credit rating of "A−" to UNIQA Insurance Group AG. UNIQA Österreich Versicherungen AG, UNIQA Re AG and UNIQA Towarzystwo Ubezpieczeń S.A. each have a rating of "A". The supplementary capital bond issued in 2015 (originally: €500.0 million, outstanding balance: €326.3 million, Tier 2, first call date: 27 July 2026), the subordinated bond issued in 2020 (€200.0 million, Tier 2, first call date: 9 July 2025) and the subordinated bond issued in 2021 (€375.0 million, Tier 2, first call date: 9 June 2031) are rated "BBB" by S&P.

# 8.4 Non-controlling interests

Non-controlling interests are measured at the acquisition date with their proportionate share in the identifiable net assets of the acquired entity.

Changes in the share in a subsidiary that do not result in a loss of control are recognised directly as equity transactions with non-controlling interests.

# 9. FINANCIAL LIABILITIES

#### 9.1 Subordinated liabilities

In July 2015, UNIQA Insurance Group AG successfully placed a subordinated capital bond (Tier 2) to the value of €500 million with institutional investors in Europe. The bond is eligible for netting as Tier 2 capital under Solvency II. The bond is scheduled for repayment after a period of 31 years and subject to certain conditions, and can only be cancelled by UNIQA after eleven years have elapsed and under certain conditions. The coupon equals 6.00 per cent per annum during the first eleven years. After that, a variable interest rate applies. The bond has been listed on the Vienna Stock Exchange since July 2015. The issue price was set at 100 per cent.

In July 2020, a subordinated bond was also issued in the amount of €200 million at an issue price of 99.507 per cent of the nominal amount. With a term of 15.25 years, it can be terminated for the first time at any time between 9 July 2025 and 9 October 2025, subject to certain conditions. The annual interest rate amounts to 3.25 per cent for the first 5.25 years, after which a variable interest rate applies. The bond is eligible for netting as Tier 2 capital under Solvency II. By issuing a green bond, UNIQA has committed to finance or refinance suitable assets in accordance with the Green Bond Framework at the same level as the issue proceeds. The bond issue has been listed on the Vienna Stock Exchange since July 2020.

<sup>&</sup>lt;sup>2</sup>) The summarised financial information corresponds to the amounts before intercompany eliminations

UNIQA placed a subordinated bond with a nominal value of €375 million in December 2021. This bond was issued to refinance higher-interest bonds issued in previous years. It is scheduled for repayment after a period of 20 years subject to certain conditions and can be cancelled by UNIQA for the first time at any time between 9 June 2031 and 9 December 2031, under certain conditions. The interest rate is 2.375 per cent for the first ten years, after which a variable interest rate applies. The issue price was set at 99.316 per cent of the nominal amount. The subordinated bond is eligible as Tier 2 basic own funds in accordance with the regulatory requirements. By issuing a green bond, UNIQA has committed to making investments in accordance with the Green Bond Framework at the same level as the issue proceeds.

# 9.2 Financial liabilities

In July 2020 UNIQA Insurance Group AG issued a senior bond in the amount of €600 million at an issue price of 99.436 per cent of the nominal amount. The senior bond has a term of ten years at a nominal interest rate of 1.375 per cent.

Total	679,622	642,525
Of which:		
Expenses for the provision of medical services	180,858	169,868
Expenses of pension and investment funds	19,625	19,061
Expenses not directly attributable to insurance		
companies and other expenses	479,139	453,596

# 12. OTHER DISCLOSURES

# 12.1 Group holding company

UNIQA's Group holding company is UNIQA Insurance Group AG. In addition to its duties as Group holding company, this company also performs the duties of a reinsurer.

# 12.2 Remuneration for the Management Board and Supervisory Board

Since 1 July 2020, the members of the Management Board of UNIQA Insurance Group AG assume a dual operational role in their function, as they also hold the Management Board function at UNIQA Österreich Versicherungen AG. This identical composition of the Management Board in both companies enables efficient management of UNIQA. Since 1 July 2020, all employment contracts of the members of the Management Board have been with UNIQA Insurance Group AG, which has paid out all remuneration since this date.

# Remuneration of the Management 1-12/20241-12/2023 Board

In € thousand

Fixed remuneration <sup>1)</sup>	5,349	4,858
Variable remuneration <sup>2)</sup>	2,841	3,586
Multi-year share-based remuneration <sup>3)</sup>	1,337	1,327
Current remuneration	9,527	9,771

The fixed salary components include remuneration in kind equivalent to €77 thousand (2023: €81 thousand)

The remuneration system was amended with effect from 1 July 2024 based on the renewed remuneration policy established by the Supervisory Board on 10 April 2024, which was the subject of a vote at the company's Annual General Meeting on 3 June 2024. The short-term incentive (STI) and the multi-year share-based remuneration long-term incentive plan (LTI) together are capped at 100 per cent of the fixed salary. The STI will therefore account for 65 per cent of the annual fixed-income in future (previously 100 per cent), and the LTI (grant value) will account for 35 per cent in future (previously 50 per cent). Conversely, the fluctuation margin for annual fixed salaries for the members of the Executive Board was increased, taking into account relevant benchmarks for comparable

companies. The new system applies on a pro rata basis from 1 July 2024 with regard to the 2024 reporting year.

For the 2020 financial year no short-term incentive was made, due to Covid-19. For the 2021 financial year, payments of  $\in$ 1,102 thousand are expected in 2025. For the 2022 financial year, payments of  $\in$ 1,102 thousand are expected in 2026. For the 2023 financial year, payments of  $\in$ 1,174 thousand are expected in 2027. For the 2024 financial year, payments of  $\in$ 3,882 thousand are expected to be made in the years 2025 and 2028.

As part of the multi-year share-based remuneration (long-term incentive plan (LTI), payments amounting to €1,337 thousand were made to the members of the Management Board of UNIQA Insurance Group AG in 2024 from the 2020 LTI allocation. For the subsequent years 2025 to 2028, a payment of €6,330 thousand is expected for 1,183,526 virtual shares allocated up to 31 December 2024.

For pension commitments and pension liability insurance to cover these commitments for the members of the Management Board, a total of  $\[ \in \]$ 1,025 thousand was paid in the reporting year (2023:  $\[ \in \]$ 896 thousand). The pension liability insurance amounts to  $\[ \in \]$ 589 thousand (2023:  $\[ \in \]$ 332 thousand). The amount expended on pensions in the reporting year for former members of the Management Board and their surviving dependents was  $\[ \in \]$ 2,278 thousand (2023:  $\[ \in \]$ 2,147 thousand).

The remuneration of the members of the Supervisory Board for their work in the 2023 financial year was €1,180 thousand. Provisions of €1,213 thousand have been recognised for the remuneration to be paid for their work in the 2024 financial year. Daily allowances and cash outlays of €193 thousand (2023: €148 thousand) were paid out in the financial year. Since 14 April 2020, the members of the Supervisory Board of UNIQA Insurance Group AG who are also members of the Supervisory Board of UNIQA Österreich Versicherungen AG have received their daily allowances and remuneration exclusively from UNIQA Insurance Group AG despite their dual function. These daily allowances and remunerations therefore also cover the Supervisory Board activities at UNIQA Österreich Versicherungen AG.

The variable remuneration does not include deferred components from the short-term incentive (STI) of the 2020 financial year for financial year 2024.

<sup>3)</sup> The long-term incentive (LTI) as a variable remuneration component corresponds to a share-based payment agreement which entitles the holder to receive a cash settlement after a four-year term if agreed tar get values are reached.

# 12.3 Share-based payment agreement with cash settlement

A share-based remuneration programme has been in place for the members of the Management Boards of UNIQA Insurance Group AG and UNIQA Österreich Versicherungen AG since the 2013 financial year. As part of this programme, UNIQA virtual shares are granted conditionally for each financial year on the basis of allocation values defined in the service contract, based on the average price of UNIQA ordinary shares in the period of six months prior to the start of the performance period. Cash payments subject to agreed limits are provided for at the end of a performance period of four years for the individual annual tranches or depending on certain performance targets.

The selected key performance targets aim to ensure a relative market-based performance measurement and an absolute performance measurement depending on UNIQA's company-specific targets. The performance targets, including performance periods up to 2022, comprised the total shareholder return (TSR) of UNIQA ordinary shares compared to the TSR of the shares in the companies in the DJ EURO STOXX TMI Insurance, the net combined ratio (CoR) in UNIQA's property and casualty insurance segment and the return on risk capital (RoRC: the return on economically required capital), with these targets each weighted equally by one third to determine overall target achievement.

Under IFRS 9/17, which will apply from the 2023 financial year, the target CoR will no longer be shown. For performance periods from 2023 onwards, two ESG targets were therefore included in the LTI programmes instead of the CoR target. These are the "Weighted Average Carbon Intensity" (WACI), which aims to reduce the average emissions intensity of the companies in UNIQA's asset portfolio, and the "Science Based Target Initiative" (SBTi), which aims to increase the proportion of companies in UNIQA's asset portfolio that have undertaken commitments to reduce emissions. Only direct investments by UNIQA in the relevant companies in the asset portfolio are taken into account for this. The two ESG targets are each weighted at 20 per cent to determine overall target achievement. The TSR and RoRC targets will be reduced from one third each to 30 per cent each.

A transitional regulation applies to the LTI programmes for 2021 and 2022. The annual target achievement(s) of the CoR target (until 2022) and the annual target achievement(s) of the two ESG targets from 2023 (within the four-year overall performance period) are determined and an average of these three key figures is calculated, which is weighted by one-third to determine the overall target achievement. The TSR and RoRC targets each have an unchanged weighting of one-third.

The programme stipulates annual investments in UNIQA shares with a holding period also of four years in each case.

The cash settlement is calculated as follows for each tranche of shares: Payment =  $A \times B \times C$ 

A = number of virtual shares awarded for the performance period.

B = average price of the UNIQA ordinary share in the period of six months before the end of the performance period.

C = degree of target achievement at the end of the performance period for the targets mentioned above. The maximum target achievement is 200 per cent.

The fair value on the date that share-based payment awards are granted is recognised as expense over the period in which the unconditional entitlement to the award is obtained. The fair value is based on expectations with respect to achievement of the defined key performance targets. Changes in measurement assumptions result in an adjustment of the recognised provision amounts affecting income. Obligations from share-based remuneration are stated under "Other provisions".

As at 31 December 2024 a total of 1,183,526 virtual shares (2023: 1,215,805) were relevant for the measurement. The fair value of share-based remuneration (excluding nonwage labour costs) at the reporting date amounts to €6,330 thousand (2023: €5,590 thousand).

# 12.4 Relationships with related companies and persons

Companies in the UNIQA Group maintain various relationships with related companies and persons.

Related companies refer to companies which exercise either a controlling or a significant influence on UNIQA. The group of related companies also includes the non-consolidated subsidiaries and associates of UNIQA.

Related persons include the members of the Supervisory Board and the Management Board as well as their close relatives. This also includes the members of management in key positions at those companies that exercise either a controlling or a significant influence on the UNIQA Group.

# 12.5 Other financial obligations and contingent liabilities

# Options received

There is an option to acquire further shares in the Telemedi Group. For the acquisition of the remaining 24.2 per cent in the Telemedi Group, an "option agreement" was concluded in the 2023 financial year with the minority shareholder with an exercise period of 2 or 3 years, according to which the capital shares can be acquired in accordance with an agreed purchase price formula. However, the structure of this leads to 100 per cent inclusion for the purposes of consolidated accounting and no non-controlling interests are to be recognised. Future payments resulting from the option agreement are recognised as current expenses in the exercise period in accordance with IAS/IFRS regulations – as 100 per cent have already been recognised in the consolidated financial statements.

There is also an option to acquire further shares in Mavie Work Deutschland GmbH (Germany, Munich). A description of this can be found under "Basis of consolidation".

# 12.6 Expenses for the auditor of the financial statements

The statutory auditor fees in the financial year were €2,995 thousand (2023: €2,159 thousand); of which €558 thousand (2023: €538 thousand) is attributable to the annual audit, €2,359 thousand (2023: €1,564 thousand) to other auditing services and €78 thousand (2023: €57 thousand) to other general services.

# 12.7 Consolidation principles

#### **Subsidiaries**

Subsidiaries are entities controlled by UNIQA. A company is considered to be controlled if:

- UNIQA is able to exercise power over the relevant entity,
- UNIQA is exposed to fluctuating returns from the participation and
- the level of returns can be influenced due to the power exercised.

The financial statements of subsidiaries are included in the consolidated financial statements from the date control begins until the date control ends.

#### Loss of control

If UNIQA loses control over a subsidiary, the subsidiary's assets and liabilities and all associated non-controlling interests and other equity components are deleted from the accounts. Any resulting profit or loss is recognised in profit/(loss) for the period. Any retained interest in the former subsidiary is measured at fair value at the date of the loss of control.

#### Investment in associates

Associates are all the entities over which UNIQA has significant influence but does not exercise control or joint control over their financial and operating policies. This is generally the case as soon as there is a voting share of between 20 and 50 per cent or a comparable significant influence is guaranteed legally or in practice via other contractual regulations. Inclusion in the basis of consolidation is based on the proportionate equity (equity method).

#### Pension and investment funds

Controlled pension and investment funds are included in the consolidation unless the relevant fund volumes were considered to be immaterial when viewed separately and as a whole. A fund is regarded as controlled if:

 UNIQA determines the relevant activities of the fund, such as the definition of the investment strategy and short and medium-term investment decisions,

- UNIQA has the risk of and the rights to variable successes of the fund in the form of distributions and participates in the performance of the fund assets, and
- the determining power over the relevant activities is exercised in the interest of UNIQA by determining the investment objectives and the individual investment decisions.

#### Basis of consolidation

31/12/2024 31/12/2023

Consolidated companies		
Austria	34	32
Other countries	61	61
Associates		
Austria	4	4
Consolidated pension and investment funds		
Austria	4	4
Other countries	9	9

Shares in non-consolidated subsidiaries and associated companies not accounted for using the equity method are allocated to the category "Variable-income securities" as "Financial assets at fair value through profit or loss" and recognised under "Other investments".

### Transactions eliminated on consolidation

Intragroup balances and transactions and all income and expenses from intragroup transactions are eliminated when consolidated financial statements are prepared.

# **Business combinations**

If the Group has obtained control, it accounts for business combinations in line with the acquisition method. The consideration transferred for the acquisition and the identifiable net assets acquired are measured at fair value. Any profit from an acquisition at a price below the fair value of the net assets is recognised directly in profit/(loss) for the period. Transaction costs are recognised as expenses immediately.

The consideration transferred does not include any amounts associated with the fulfilment of pre-existing relationships. Such amounts are generally recognised in profit/(loss) for the period.

Any contingent obligation to pay consideration is measured at fair value at the acquisition date. If the contingent consideration is classified as equity, it is not revalued, and a settlement is accounted for within equity. Otherwise, later changes in the fair value of the contingent consideration are recognised in the profit/(loss) for the period.

# 12.8 Basis of consolidation

#### Initial consolidation

The initial consolidation took place in the second quarter of 2024 for OPERATOR MEDYCZNY CENTRUM Sp. z o.o. (Poland, Warsaw). In the third quarter of 2024, the initial consolidation took place for Mavie Next GmbH (Vienna) and the fourth quarter saw initial consolidation for Mavie Work GmbH (Vienna).

# **Restructuring processes**

In the third quarter of 2024, R-FMZ Immobilien Holding GmbH (Vienna) was deconsolidated due to the contribution to UNIQA Sustainable Business Solutions GmbH (formerly: UNIQA Retail Property GmbH (Vienna)) with retroactive effect to 31 December 2023.

# Acquisition

In the third quarter of 2024, 100 per cent of the shares in Wronia 31 GmbH (Vienna) were acquired. The purchase price is almost equal to the share capital acquired.

#### **Business combination**

UNIQA acquired 50.1 per cent of the shares in Mavie Work Deutschland GmbH (formerly wellabe GmbH) (Germany, Munich) on 2 August 2024. Together with the 5.94 per cent already held and the capital increase carried out in the course of the acquisition, UNIQA now holds 63.63 per cent of the capital shares. Option agreements for the acquisition of the remaining 36.37 per cent were entered into with the remaining shareholders with an exercise period of 2 or 3 years, after which the capital shares can be acquired in accordance with an agreed purchase price formula. However, the structure of these leads to 100 per cent inclusion in the consolidated financial statements and no non-controlling interests are to be recognised. The different structure for the option agreements means that part of the resulting future payments must be treated as a purchase price component and part is recognised as a current expense in the exercise period. The company is recognised in the "Group functions" segment and in the health insurance business line.

# Assets and liabilities from business combinations at acquisition date

In € thousand

# 12.9 Foreign currency translation

# Functional currency and reporting currency

The items included in the financial statements for each operating subsidiary are measured based on the currency that corresponds to the currency of the primary economic environment in which the subsidiary operates (functional currency). The consolidated financial statements are prepared in euros which is UNIQA's reporting currency.

# Transactions in foreign currencies

Transactions in foreign currencies are translated into the functional currency of the Group entity at the exchange rate on the date of the transaction or, in the case of remeasurement, at the time of measurement.

Monetary assets and liabilities denominated in a foreign currency on the reporting date are translated into the functional currency at the closing rate. Non-monetary assets and liabilities measured at fair value in a foreign currency are translated at the rate valid on the date the fair value is calculated. Currency translation differences are generally recognised in profit/(loss) for the period. Non-monetary items recognised in a foreign currency at historical cost are stated with the historical exchange rate. This does not give rise to a currency translation difference.

# Foreign operations

Assets and liabilities from foreign operations, including the goodwill and fair value adjustments that result from the acquisition, are translated into euros at the closing rate on the reporting date. Currency translation differences are reported in other comprehensive income and recognised in equity as a part of the accumulated profits in the item "Differences from currency translation" if the foreign exchange difference is not attributable to non-controlling interests.

Income and expenses from foreign operations are translated at the average of the monthly closing rates.

# 13. SIGNIFICANT EVENTS AFTER THE REPORTING DATE

#### STRABAG – Court judgement in Kaliningrad (Russia)

On 20 January 2025, a Russian special court handed down a judgement against STRABAG SE (Villach, (STRABAG)) and the core shareholders of the STRABAG syndicate, which also includes UNIQA. In the judgement, however, the court only ordered AO Raiffeisenbank (Russia, Moscow) to pay around €2 billion in damages to MKAO "Rasperia Treiding Limited" (Russia, Kaliningrad, (Rasperia)) and in return granted it the STRABAG shares held by Rasperia. UNIQA does not hold a stake in AO Raiffeisenbank, which means there are no direct effects on UNIQA. The judgement is not enforceable in Austria due to existing EU sanctions. Irrespective of this, UNIQA will be appealing against the judgement. From the current perspective, there are therefore no significant effects on UNIQA's assets, earnings and financial condition.

# 14. RISK REPORT

# 14.1 Risk strategy

# **Principles**

UNIQA's strategic objectives are directly linked to the company's risk strategy. The cornerstones of the risk strategy are based on the business strategy and the risks it entails. A clear definition of the risk preference creates the foundation for all business policy decisions.

# Organisation

UNIQA's core business is to relieve customers of risk, pool the risk to reduce it and thereby generate profit for the company. The focus is on understanding risks and their particular features. To ensure a strong focus on risk, UNIQA has created a separate risk function on the Group's Management Board with a Group Chief Risk Officer (CRO) who is also acting concurrently as Group Chief Financial Officer (CFO). In the Group companies, the Chief Risk Officer is also a part of the Management Board. This ensures that decision-making is risk-based in all relevant bodies. UNIQA has established processes that make it possible to identify, analyse and manage risks.

The risk profile is regularly validated at all levels of the hierarchy and discussions are held in specially instituted committees with the members of the Management Board. Internal and external sources are consulted to obtain a complete picture of the risk situation. UNIQA regularly checks for new threats both in the Group and in the subsidiaries.

# Risk-bearing capacity and risk appetite

UNIQA assumes risk in full awareness of its risk-bearing capacity. This is defined as the capacity to absorb potential losses from extreme events so that medium- and long-term objectives are not put in danger.

The Solvency Capital Requirement (SCR) is at the centre of risk-related decisions. The SCR corresponds with a company-specific risk assessment based on a partial internal model for market risks and non-life risks, as well as on the standard model according to Solvency II for the other categories of risk. As such, it corresponds to the regulatory risk calculations under the Solvency II framework. Based on this approach, we aim to achieve a solvency capital ratio of at least 180 per cent. Immediate steps will be taken to improve the capital position if the marginal value falls below 135 per cent.

Non-quantifiable risks, in particular operational risk, litigation risk and strategic risk are identified and assessed as part of the risk assessment process. This assessment is then used as the basis for implementing any necessary risk mitigation measures.

The risk strategy defines which risks are to be assumed and which are to be avoided. Within the scope of the strategy process, risk appetite is defined based on UNIQA's risk-bearing capacity. This risk appetite is then used to determine tolerances and limits, which provide a sufficient early warning system for the company to initiate prompt corrective action in the event of any deviation from targets. UNIQA counters risks that fall outside the defined risk appetite, such as reputational risk, with proactive measures, transparency and careful assessment.

# **Opportunities**

Risk also means opportunity. UNIQA regularly analyses trends and risks that have an impact on society and therefore on customers and UNIQA itself. Employees throughout the company are involved in order to recognise and analyse trends at an early stage, produce suitable action plans and develop innovative approaches.

# 14.2 Risk management system

The focus of risk management with management structures and defined processes is the attainment of UNIQA's and its Group companies' strategic goals.

UNIQA's risk management guidelines form the basis for a uniform standard at different company levels. The guidelines are approved by the CFO/CRO and the Group Executive Board and describe the minimum requirements in terms of organisational structure and process structure.

In addition to the Group Risk Management Guidelines, similar guidelines have also been prepared and approved for the Group companies. The Risk Management Guidelines at company level were approved by the Management Board of the UNIQA Group companies and are consistent with UNIQA's Risk Management Guidelines.

# Organisational structure (governance)

The detailed setup of the process and organisational structure of risk management is set out in UNIQA's Risk Management Guidelines. They reflect the principles embodied in the concept of "three lines" and the clear differences between the individual "lines".

# First line: Risk management within the business activity

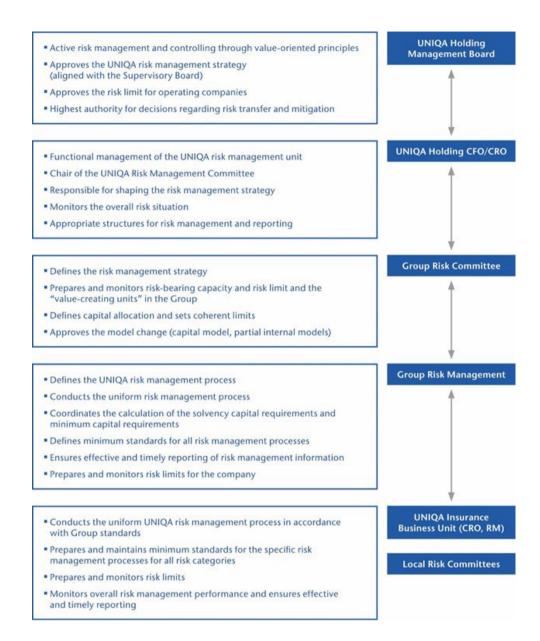

Those responsible for business activities must develop and put into practice an appropriate risk control environment to identify and monitor the risks that arise in connection with the business and processes.

# Second line: Supervisory functions including risk management functions

The risk management function and the supervisory functions, such as controlling, must monitor business activities without encroaching on operational activities.

# Third line: internal audit

This enables an independent review of the formation and effectiveness of the entire internal control system, which comprises risk management and compliance (e.g. internal auditing).

The relevant responsibilities are shown accordingly in the overview above. In addition, the Supervisory Board at UNIQA Insurance Group AG receives comprehensive risk reports at Supervisory Board meetings.

# Risk management process

UNIQA's risk management process delivers periodic information about the risk profile and enables the top management to make the decisions for the long-term achievement of objectives.

The process concentrates on risks relevant to the company and is defined for the following risk categories:

- market risk/asset-liability management risk (ALM risk),
- credit risk/default risk,
- liquidity risk,
- concentration risk,
- underwriting risk (property and casualty insurance, health and life insurance),
- · operational risk,
- · emerging risk,
- · reputational risk,
- · contagion risk and
- · strategic risk.

A Group-wide, standardised risk management process regularly identifies, evaluates and reports on risks to UNIQA and its Group companies within these categories of risk.

Sustainability risks or ESG risks include risks related to the sustainability factors of environment, social/employee and governance ("ESG"). They are not considered as a separate risk category, but are taken into account as part of the existing ten risk categories. Climate change represents the central sustainability risk with respect to the environmental sustainability factor. Climate-related risks arise in the form of physical risks and transition risks.

Physical risks arise from the increase in extreme weather events such as floods, earthquakes, storms and heat waves, as well as the rise in average temperature. Transition risks on the other hand are adjustment risks that arise from the transition to a low-carbon economy. These include e.g. risks associated with the change in climate policy, the renewal of technologies and the change in market preferences. In addition to the effect of physical risks on the frequency and amount of claims, there may be further effects from transition risks on UNIQA's assets, liabilities, financial position and profit or loss, particularly in connection with the capital investment strategy pursued.

Risk identification is the starting point for the risk management process, systematically recording all major risks and describing them in as much detail as possible. Different approaches are used in parallel in order to identify risks to the maximum extent possible, with all categories of risk, subsidiaries, processes and systems included in this process.

The risk categories of market risk, underwriting risks and default risk are evaluated at UNIQA by means of quantitative methods either based on the Solvency II standard approach or the partial internal model (for non-life or market risks). Furthermore, risk drivers are identified for the results from the standard approach and analysed to assess whether the risk situation is adequately represented (in accordance with the Company's Own Risk and Solvency Assessment (ORSA)). All other risk categories are evaluated quantitatively or qualitatively with their own risk scenarios.

UNIQA attaches great importance to risk awareness, particularly in the first line of defence, in order to ensure effective risk awareness and compliance with regulatory requirements. Group Risk Management promotes this through targeted initiatives. These measures raise awareness of risks and support minimisation of operational risk.

# 14.3 Activities and objectives in 2024

Based on external and internal developments, activities in 2024 focused on the following:

- Capital market environment
- Sustainability (ESG)
- Cyber risk, Digital Operational Resilience Act
- (DORA) and AI Act
- Business continuity management (BCM) risks

# Capital market environment

Inflation has no longer represented a primary risk for UNIQA since 2024 year-end, as the economic impact has been largely offset by targeted measures. These measures have helped to mitigate the effects of inflation on the business model and ensure stable profitability. Nevertheless, macroeconomic factors such as interest rates and credit spreads remain relevant influencing factors that need to be observed.

#### Sustainability (ESG)

UNIQA has successfully created a solid basis for managing sustainability risks in recent years and implemented further key measures in 2024. These included identifying and addressing sustainability risks at an early stage, adapting strategies to new regulations on a continuous basis and developing and analysing climate scenarios in order to prepare for climate-related risks more effectively. A complete materiality analysis was also carried out. Limit monitoring was further developed through increased automation of data analysis, which enabled a more comprehensive assessment of sustainability risks and a responsible investment policy.

# Cyber risk, Digital Operational Resilience Act (DORA) and Al Act

UNIQA is facing increasing cyber threats due to its growing dependence on digital technologies, with threats that include phishing attacks, ransomware and social engineering, which constitute a risk to customer data and sensitive information in particular. In order to minimise these risks, UNIQA has developed a comprehensive cyber security strategy based on measures such as regular reviews of the IT infrastructure, the implementation of a Security Operations Center and efforts to raise employee awareness of these issues. The introduction of the DORA is also intended to strengthen resilience in the financial sector through stricter cyber security standards. Furthermore, UNIQA has actively encouraged the use of AI and generative AI to leverage productivity improvements and innovative applications in line with regulatory requirements, while covering all three lines of defence through raising awareness, ensuring training initiatives and providing clear guidelines.

# Business continuity management (BCM) risks

UNIQA also implemented scenario-based crisis management training in 2024 aimed at strengthening resilience, with the work of the crisis management team put into real-life practice and with potentials for improvement identified and subsequently integrated into crisis management plans. In addition, the second line of defence regularly reviewed compliance with security governance and assessed key controls in various business units.

# 14.4 Challenges and priorities in risk management for 2025

#### Full internal model

In view of the many challenges both for UNIQA and the Financial Market Authority , the decision was taken in 2024 to continue the "Full internal model" project with an adjusted timetable. The current plan is to expand and optimise the model in stages. The aim now is to finalise the full internal model by 2027 before submitting this for official approval. UNIQA will use and further develop the model internally in the defined business lines until then in order to create a solid basis for final implementation.

# Cyber risk and DORA

UNIQA has prioritised strengthening cyber security and compliance with the new DORA regulations (Digital Operational Resilience Act) for 2025. In the face of increasing threats such as from phishing and ransomware, the plan is

to provide comprehensive protection for the IT infrastructure and data in order to avoid financial losses, reputational damage and disruptions to operations. One key element of this involves the additional introduction of a Security Information and Event Management (SIEM) system and a Security Operations Center (SOC) in order to detect and ward off threats in real time. Training for employees also increases awareness of cyber risks, while appropriate cyber insurance covers the financial consequences of any possible attacks. UNIQA's focus overall in 2025 is on strong cyber resilience and compliance with the new DORA regulations in order to counter current and future threats effectively.

# Al Act (Artificial Intelligence Act)

UNIQA recognises the significant opportunities and challenges arising from advances in artificial intelligence (AI) and machine learning (ML), particularly in areas such as statistical modelling, generative AI applications and datadriven decisions. While UNIQA is exploring generative AI for applications such as automated customer communication and knowledge transfer, the company is also aware of the risks associated with this, including data protection and compliance with intellectual property regulations. UNIQA has already implemented a robust governance framework aimed at minimising these risks. UNIQA will strive in 2025 to continue using AI and ML technologies responsibly, increase productivity and improve customer communication.

# 14.5 Risk profile

UNIQA's risk profile is very heavily influenced by the life and health insurance portfolios of UNIQA Österreich Versicherungen AG. This situation means that market risk plays a central role in UNIQA's risk profile.

The Group companies in Central Europe operate in the property and casualty business lines as well as in the life and health insurance business lines. In the CEE region, the property and casualty sectors are the most dominant.

31/12/2024 31/12/2023

This structure is important to UNIQA, because it offers a high level of diversification from the life and health business lines that dominate in the Austrian companies.

The distinctive risk features of the regions are also reflected in the risk profiles determined by using the internal measurement approach.

# Market and credit risks

The strength of the market and credit risks depends on the structure of the capital investment and its allocation to the different asset categories. The table below shows investments classified by asset category.

Asset allocation In € thousand	31/12/2024	31/12/2023
Fixed-income securities	13,480,828	13,296,476
Real estate assets	2,382,317	2,411,947
Pension fund	1,824,492	1,808,177
Equity investments and other stocks	1,105,420	1,022,366
Shares and equity funds	1,447,745	1,276,852
Time deposits	404,415	520,399
Other investments	80,299	95,660
Total	20,725,515	20,431,878

However, the market and credit risks not only have an impact on the value of investments, but also influence the level of technical liabilities. Thus, there is – particularly in life insurance – a dependence between the (price) growth of assets and liabilities from insurance contracts. UNIQA manages earnings expectations and the risks of assets and liabilities from insurance contracts as part of the ALM process. The objective is to ensure sufficient liquidity while retaining the greatest possible security and balanced risk in order to achieve a return on capital that is sustainably higher than the guaranteed performance of the technical liabilities. To do this, assets and liabilities are allocated to different accounting groups.

The following two tables show the main accounting groups generated by the various product categories.

Assets In € thousand	31/12/2024	31/12/2023
Long-term life insurance contracts with guaranteed interest and profit participation	10,266,088	10,515,489
Long-term unit-linked and index-linked life		
insurance contracts	4,354,843	4,291,320
Long-term health insurance contracts	5,383,823	5,046,235
Short-term property and casualty insurance		
contracts	6,005,756	5,884,178
Total	26,010,509	25,737,221

These values refer to the following items:

Land and buildings for own use

Net liabilities of insurance and

- Investment property
- Investments accounted for using the equity method
- Other investments
- Unit-linked and index-linked life insurance investments
- Cash

reinsurance contracts In € thousand		
Long-term life insurance contracts with guaranteed interest and profit participation	9,640,489	9,865,889
Long-term unit-linked and index-linked life insurance contracts	3,927,167	3,919,669
Long-term health insurance contracts	3,933,883	3,644,153
Short-term property and casualty insurance contracts	4,039,677	3,915,834
Total	21,541,217	21,345,545

These values refer to the following items:

- Liabilities arising from insurance contracts
- Assets arising from insurance contracts
- Liabilities arising from reinsurance contracts
- Assets arising from reinsurance contracts

Furthermore, the net liabilities from insurance and reinsurance contracts are shown in the following two tables, broken down by region and, for property and casualty insurance, by business line.

# Net liabilities of insurance and reinsurance contracts (by region)

31/12/2024 31/12/2023

Other forms of insurance	87,203	63,438
Total	4,039,677	3,915,834

The market and credit risk is broken down into interest rate, credit spread, equity, currency and market concentration risk.

The **interest rate risk** arises on all asset and liability items of the statement of financial position whose value fluctuates as a result of changes in risk-free yield curves or associated volatility. Given the high proportion of interest-bearing securities in the assets, interest rate risk forms an important part of market risk. The interest rate risk is actively managed as part of the ALM-based investment strategy.

The following table shows the maturity structure of fixedincome securities.

Exposure by term In € thousand	31/12/2024	31/12/2024 31/12/2023		
Up to 1 year	824,118	598,058		
More than 1 year up to 3 years	1,576,842	1,612,605		
More than 3 years up to 5 years	1,834,590	1,906,495		
More than 5 years up to 7 years	1,353,903	1,750,013		
More than 7 years up to 10 years	2,153,269	2,219,369		
More than 10 years up to 15 years	1,583,269	1,645,037		
More than 15 years	4,154,838	3,564,899		
Total	13,480,828	13,296,476		

Since the interest rate risk is particularly relevant in life insurance as a result of the long-term liabilities, the focus below is placed on this business line.

The difference between the change in assets and the change in technical provisions resulting from a change in interest rates is used as the basis for managing the interest rate risk and/or the duration gap. During the annual ALM process, it is determined from a strategic point of view which budgets for interest rate risk can be accepted at the operating company level.

The discount rate that may be used in the costing when new business is written in most UNIQA companies takes into account a maximum discount rate imposed by the relevant local supervisory authority. In all those countries where this is not the case, appropriate prudent, market-based assumptions are made by the actuaries responsible for the calculation. In our core market of Austria, the maximum interest rate since 1 July 2022 is 0 per cent per annum. However, the portfolio also includes older contracts with different discount rates. In the relevant markets of the UNIQA Group, these rates amount to as much as 4.0 per cent per annum. The following table provides an overview of the average technical discount rates by region and currency.

Average technical discount rates, core business by region and currency	EUR	USD	Local currency
Austria (AT)	2.0		
Central Europe (CE)	2.8		3.1
Eastern Europe (EE)	3.0	3.1	2.7
Southeastern Europe (SEE)	2.7	3.1	1.3

As these interest rates are guaranteed by the insurance company, the financial risk lies in not being able to generate these returns. Since classic life insurance business predominantly invests in interest-bearing securities, the unpredictability of long-term interest rate trends is the most significant financial risk for a life insurance company. The investment and reinvestment risk comes from the fact that premiums received in the future must be invested at an interest rate guaranteed at the time of conclusion. However, it is entirely possible that no appropriate securities will be available at the time that the premium is received. Future income must also be reinvested at the discount rate at a minimum. For this reason, UNIOA has already decided to only offer products in its key markets that are based on a low or zero discount rate. One example of this in Austria is the sale of deferred pension products with a discount rate of 0 per cent.

The **credit spread risk** refers to the risk of changes in the price of asset or liability items in the statement of financial position, as a consequence of changes in credit risk premiums or associated volatility, and is ascertained for individual securities in accordance with their rating and duration. When investing in securities, UNIQA chooses securities with a wide variety of ratings, taking into consideration the potential risks and returns.

The following table shows the credit quality of those fixedincome securities that are neither overdue nor written down, based on their ratings.

<b>Exposure by rating</b> In € thousand	31/12/2024 31/12/202			
AAA	2,219,777	2,877,848

Not rated	722,317	766,739		
Total	13,480,828	13,296,476		

**Equity risk** arises from movements in the value of equities and similar investments as a result of fluctuations in international stock markets, and therefore, stems in particular from the asset categories "Equity investments and other stocks" and "Equities". The effective equity weighting is controlled by hedging with the selective use of derivative financial instruments.

<b>Equities index</b>	EUR (EUR	CZK (PX)

5 years	20.35 % 21.13				
10 years	22.99 % 24.52				

Foreign currency risk is caused by fluctuations in exchange rates and associated volatility. Given the international nature of the insurance business, UNIQA invests in securities denominated in different currencies, thus following the principle of ensuring matching liabilities with assets in the same currency to cover liabilities at the coverage fund or company level. Despite the selective use of derivative financial instruments for hedging purposes, it is not always possible on cost grounds or from an investment point of view to achieve complete and targeted currency matching between the assets and liabilities. The following tables show a breakdown of assets and liabilities by currency.

Currency risk		31/12/2024

Total	28,150,959	25,420,840

The following tables show the most important market risks in the form of key sensitivity figures, along with their impact on equity and profit/(loss) for the period. Depending on the measurement principle to be applied, any future losses from the measurement at fair value may result in different fluctuations in profit/(loss) for the period or in other comprehensive income. The key figures are calculated theoretically on the basis of actuarial principles and do not take into consideration any diversification effects between the individual market risks or countermeasures taken in the various market scenarios.

In addition to figures from the established market and credit risk models (MCEV, SCR, etc.), stress tests and sensitivity analyses are used to measure and manage market and credit risk and their components.

Sensitivities for other investments are determined by simulating each scenario for each individual item, keeping all other parameters constant in each case.

In **life insurance** the interest rate assumptions are the crucial influencing factor on the liability adequacy test and deferred acquisition costs. For this reason, the effects of the implicit new money assumption (including reinvestments) are shown below.

In **non-life insurance**, the liability for incurred claims is formed based on reported claims and applying accepted statistical methods. One crucial assumption here is that the pattern of claims observed from the past can be sensibly extrapolated for the future. Additional adjustments need to be made in cases where this assumption is not possible.

The calculation of claim provisions is associated with uncertainty based on the time required to process claims. In addition to the normal chance risk, there are also other factors that may influence the future processing of the

claims that have already occurred. In particular, the reserving process for court damages in property and casualty insurance should be mentioned here. A reserve estimate is prepared here for these damages based on expert assessment, although this estimate can be exposed to high levels of volatility specifically with major damage at the start of the process for collecting court costs.

1,808,177

15,625,133

The partial internal model in property and casualty insurance is a suitable instrument for quantifying the volatility involved in processing. Following analysis of these model results, the determination was made that a deviation of 5 per cent from the basic provision calculated could represent a realistic scenario. Based on the current liability for incurred claims of  $\{4,348.5 \}$  million (excluding additional provisions such as provisions for unsettled claims) in the Group on a gross basis, this would mean an increase in loss expenses by  $\{2,174.3 \}$  million.

In health insurance (similar to life technique), only tariffs with a discount rate of 0.5 per cent have been sold since 1 July 2021. Together with measures to reduce the assumed interest rate in the portfolio, an average discount rate of approx. 2.4 per cent was achieved as at 31 December 2023. A reduction in the capital earnings by 100 bp (based on 2024 investment results) would reduce the earnings before taxes by €52.8 million.

# Liquidity risk

Ongoing liquidity planning takes place in order to ensure that UNIQA is able to meet its payment obligations over the next twelve months.

Obligations with a term of more than twelve months are covered by investments with matching maturities as far as possible within the framework of the ALM process and the strategic guidelines. In addition, a majority of the securities portfolio is listed in liquid markets and can be sold

quickly and without significant markdowns if cash is required.

### Concentration risks

UNIQA strives to keep concentration risks as low as possible.

These could arise, for example, from the transfer of insurance business to individual reinsurance companies to an inappropriate extent. This can have a material impact on UNIQA's results if an individual reinsurance company is in arrears (or in default). UNIQA controls this risk with an internal reinsurance company that is responsible for selecting external reinsurance parties, taking into account strict guidelines for avoiding material concentration risks.

However, concentration risk can also arise among other things from the composition of balance sheet items reported in the assets. Throughout the investment period, the company continuously checks to ensure that the investment volumes in securities of individual issuers do not exceed certain limits in relation to the total investment volume, defined according to the respective credit rating.

### **Underwriting risks**

The underwriting risks are subdivided into non-life insurance, health insurance and life insurance.

The underwriting risk in **non-life insurance** is broken down into the three risk categories of premium, reserve and catastrophe risk.

Premium risk is defined as the risk that future benefits and expenses in connection with insurance operations will exceed the premiums collected for the insurance concerned. Such a loss may also be caused in insurance operations by exceptionally significant, but rare loss events, known as major claims or shock losses. Natural disasters represent another threat from events with low frequency but high losses. This risk includes financial losses caused

by natural hazards, such as floods, storms, hail or earthquakes. In contrast to major individual claims, insurance companies in this case refer to cumulative losses.

Coupon payments

The reserve risk describes the risk that the technical provisions recognised for claims that have already occurred are insufficient. This is referred to as a run-off loss. The claim reserve is calculated using actuarial methods. External factors, such as changes in the amount or frequency of claims, legal decisions, repair and/or handling costs, can lead to differences compared with the estimate.

To counter and actively manage these risks, UNIQA runs a number of processes integrated into its insurance operations. For example, a Group policy specifies that new products may only be launched if they satisfy certain profitability criteria. Major claims and losses from natural catastrophes are appropriately managed by means of special risk management in the underwriting process (primarily in corporate activities) and by the provision of suitable reinsurance capacity.

In connection with claim reserves, guidelines also specify the procedures to be followed by local units when recognising such reserves in accordance with IFRSs. A quarterly monitoring system and an internal review process safeguard the quality of the reserves recognised in the whole of the Group.

An essential element in risk assessment and subsequently risk management is the use of the non-life partial model. This risk model uses stochastic simulations to quantify the risk capital requirement per risk category at company and Group level.

<sup>1)</sup> Contractual maturities based on the first possible termination date

The **health insurance business** is operated primarily in Austria. As a result, risk management in this line focuses mainly on Austria.

Health insurance is a loss insurance which is calculated under consideration of biometric risks and is operated in Austria similar to life technique.

The main techniques for risk mitigation in health insurance are the adjustment of future profit participations and the premium adjustment, which is carried out in compliance with legal and contractual framework conditions. These measures are crucial for the underlying risk models and contain detailed information and regulations, particularly with regard to profit participation. In practice, conventional risk-mitigation techniques are also relevant here.

For health insurance they include:

- prudent setting of the discount rate at a level that is expected to be earned in the long term;
- risk selection and thereby targeted pre-selection of prospective customers for insurance products, for example through health checks;
- careful selection of the termination rate probabilities (death and lapse) in order to calculate adequate premiums for the benefits to be expected;
- the consideration of premium adjustment clauses in various health insurance products in order to be able to adjust premiums in line with changes in the calculation principles in case of changes in the expected values; and
- reinsurance solutions are applied to partial portfolios where necessary.

In addition to these conventional risk mitigation techniques, an ongoing process for managing portfolios has been established. This process is carried out annually by determining and evaluating the need for rate adjustments. The effectiveness of the risk mitigation techniques described for the health business is assessed by comparing invoices and actual benefits as well as by calculating contribution margin calculations.

In **life insurance**, the underwriting risk is generally defined as the risk of loss or adverse developments affecting the value of insurance liabilities. It is divided into the categories of mortality, longevity, disability-morbidity, lapse, expense, revision and catastrophe risk.

The mortality risk depends on possible fluctuations in mortality rates due to an increase in deaths which would have an adverse effect on the expected benefits to pay on risk insurance policies.

Longevity risk refers to the adverse effects of random fluctuations in mortality rates that are attributable to a decline in the mortality rate. The insurer is thereby exposed to the risk that the anticipated life expectancy in the calculation of the premium will be exceeded in real terms and that the expenditure for pension payments will be higher than planned.

The disability-morbidity risk is caused by possible adverse fluctuations in disability, sickness and morbidity rates compared to what they were at the time the premium was calculated.

The lapse risk arises from the fluctuations in policy cancellation, termination, renewal, capital selection and surrender rates of insurance policies. Overall, it represents the uncertainty regarding customer behaviour.

The expense risk refers to adverse effects due to fluctuations in the administrative costs of insurance and reinsurance contracts.

The revision risk results from fluctuations in the revision rates for annuities due to changes in the legal environment.

The catastrophe risk results from significant uncertainty in relation to pricing and the assumptions made in the creation of provisions for extreme/exceptional events. The most relevant risk in this context is an immediate drastic increase in mortality rates: in this case, death benefits in the risk portfolio could not be fully financed by the risk premium collected.

In the context of life insurance, the main techniques for risk mitigation are the adjustment of future profit participations or a corresponding premium adjustment as well as additional reinsurance policies, which are carried out in compliance with legal and contractual framework conditions. These measures are crucial for the underlying risk models and contain detailed information and regulations, particularly with regard to profit participation. In practice, profitable new business supports the risk-bearing capacity of the existing portfolio, whereby careful risk selection (e.g. health checks) and cautiously chosen calculation principles for premiums are essential cornerstones when designing products. By including premium adjustment clauses, the potential to reduce risk can be improved, especially in the risk and occupational disability portfolio.

### Operational risk

Operational risk includes losses that are caused by insufficient or failed internal processes, as well as losses caused by systems, human resources or external events.

The operational risk includes legal risk, but not reputation or strategic risk. Legal risk is the risk of uncertainty due to lawsuits or uncertainty in the applicability or interpretation of contracts, laws or other legal requirements. At UNIQA, legal risks are monitored on an ongoing basis, and reports are made to the Group Management Board. UNIQA's risk management process also defined the risk process for operational risks in terms of methodology, workflow and responsibilities. A risk manager is responsible for compliance in all Group companies.

A distinctive feature of operational risk is that it can surface in all processes and departments. This is why operational risk is identified and evaluated in every operational company at a very broad level within UNIQA. Risks are identified with the help of a standardised risk catalogue that is regularly checked for completeness.

According to international standards, UNIQA – as a financial service provider – forms part of the critical infrastructure of key importance to the national community. If this infrastructure were to fail or become impaired, it would cause considerable disruption to public safety and security or lead to other drastic consequences.

As a rule, emergencies, crises and disasters are unexpected events for which it is impossible to plan, although systems and processes can be put in place to deal with such events. The systems and processes must then be treated as a special responsibility of management and must be dealt with professionally, efficiently and as quickly as possible.

UNIQA has implemented a business continuity management system covering the issues of crisis prevention, crisis management and business recovery (including business emergency plans). The UNIQA BCM model is based on international rules and standards and is developed on a continuous basis.

# **Emerging risk**

Emerging risk refers to newly arising or changing risks that are difficult to quantify and can have a significant impact on an organisation. Among the main drivers of the changing risk landscape are new economic, technological, socio-political and ecological developments and the increasing interdependencies between them, which may lead to a growing concentration of risk. In addition, a changing business environment – the further development of regulatory rules, the increased expectations of stakeholders and the shift in risk perception – must be taken into account.

### Reputational risk

Reputational risk describes the risk of loss that arises because of possible damage to the company's reputation, because of a deterioration in prestige, or because of a negative overall impression caused by negative perception by customers, business partners, shareholders or supervisory agencies. Reputational risks that occur in the course of core processes such as claim processing or advising and service quality are identified, evaluated and managed as operational risks in the Group companies.

# Contagion risk

Group risk management analyses whether the reputation risk observed in the Group or in another unit may occur, and whether the danger of "contagion" within the Group is possible. The analyses performed guard against contagion risk.

### Strategic risk

Strategic risk refers to the risk that results from management decisions or insufficient implementation of management decisions that may influence current or future income or solvency. This includes the risk that arises from management decisions that are inadequate because they ignore a changed business environment. Like operational and reputational risks, strategic risks are evaluated on an ongoing basis.

The following table shows a sensitivity analysis of changes in the most significant underwriting risks and market risks with their impact on assets and technical provisions in accordance with Solvency II. UNIQA has aligned its management processes with the requirements under Solvency II and uses these for control purposes.

The differences between the calculations of insurance contracts under Solvency II and IFRS 17 are primarily due to differences in the scope of the costs taken into account, different contractual limits and the different discount rates applied.

In accordance with IFRS 17, only costs that can be directly allocated to an insurance contract can be recognised. Under Solvency II on the other hand, the full cost approach is used for the measurement of technical obligations.

- Both sets of rules include contract boundaries in the modelling of future cash flows. Solvency II is primarily based around the risk perspective, while IFRS 17 focuses on the insurance contract itself. These different approaches also have an impact on supplementary insurance policies: In accordance with IFRS 17, these are based on the main insurance cover, while Solvency II sets different standards in this regard. A further difference can be seen in outwards reinsurance contracts. Under Solvency II, the term of the contract is based on the primary insurance contract, while IFRS 17 takes into account the contract terms under the reinsurance contract.
- Strict regulatory definitions apply under Solvency II with regard to the discounting of the cash flows calculated for the term. By contrast, the derivation of the interest rate and the determination of the risk margin in accordance with IFRS 17 is based on principle and is at the company's discretion.

Despite these differences, UNIQA considers the risk sensitivities determined in accordance with Solvency II to be a suitable basis for the measurements in accordance with IFRS 17.

The technical provisions in accordance with Solvency II amount to €4,188 thousand (2023: €3,890 thousand) in property and casualty insurance and to €14,358 thousand (2023: €14,524 thousand) in life insurance.

The changes in the base value shown must be considered in isolation in each case. This means that different sensitivities cannot be added together to derive a cumulative change in the base value.

Sensitivity analysis	31/12/2024	31/12/2023
----------------------	------------	------------

In € thousand	Impact on assets	mpact on liabilities	Impact on assets	Impact on liabilities
Underwriting risks

Credit spread risk corporate bonds (+ 50 bp)	-170,310	-112,872	-187,450	7,172
Credit spread risk government bonds (+50 bp)	-461,568	-235,533	-428,726	-99,652

### 14.6 Reinsurance

The Group Management Board determines, directly and indirectly, the strategic contents of its reinsurance policy with its decisions regarding risk and capital policy. The structure of the purchasing of external reinsurance is linked to the risk management process, thus enabling the risk capital to be relieved.

Reinsurance structures support the continuous optimisation of the required risk capital and the management of the use of this risk capital. Great importance is attached to the maximum use of diversification effects. Continuous analysis of reinsurance purchasing for efficiency characteristics is an essential component of internal risk management processes.

UNIQA Re AG in Zurich, Switzerland, is responsible for the operational implementation of these tasks. It is responsible for and guarantees the implementation of the reinsurance policy issued by the Group Management Board. UNIQA Re AG is available to all Group companies as the risk carrier for their reinsurance needs. The assessment of the exposure of the portfolios assumed by the Group companies is of central importance. Periodic risk assessments have been performed for years in the interest

of a value-based management of the capital commitment. Extensive data are used to assess risk capital requirements for the units in question and their reinsurance programmes are structured in a targeted manner.

For the property and casualty insurer, promises of performance for protection against losses resulting from natural hazards frequently represent by far the greatest stress on risk capital due to the volatile nature of such claims and the conceivable amount of catastrophic damages. UNIQA has taken this into account by setting up a specialised unit. Exposure is constantly monitored and evaluated at the country and Group levels in cooperation with internal and external authorities. UNIQA substantially eases the pressure on its risk capital through the targeted utilisation of all applicable diversification effects and the launching of an efficient retrocession programme.

UNIQA Re AG has assumed almost all of the UNIQA Group's required reinsurance business ceded in the reporting period. A portion of the cessions required is only transferred directly to external reinsurance companies in exceptional cases, such as when purchasing facultative reinsurance. The Group assumes reasonable deductibles in the retrocession programmes based on risk and value-based approaches.

# Approval for publication

These consolidated financial statements were prepared by the Management Board as at the date of signing and approved for publication.

# Auditor's Report

#### **Report on the Consolidated Financial Statements**

# **Audit Opinion**

We have audited the consolidated financial statements of UNIQA Insurance Group AG, Vienna, and its subsidiaries (the Group), which comprise the consolidated balance sheet as at 31 December 2024, the consolidated income statement, the consolidated statement of comprehensive income, the consolidated statement of cash flows and the consolidated statement of changes in equity for the financial year then ended, and the notes to the consolidated financial statements.

In our opinion, the accompanying consolidated financial statements comply with legal requirements and give a true and fair view of the financial position of the Group as at 31 December 2024, and of its financial performance and cash flows for the financial year then ended in accordance with International Financial Reporting Standards as adopted by the EU (IFRSs) and the additional regulations of section 245a Austrian Company Code and the supplementary provisions of section 138 para. 8 Austrian Insurance Supervision Act.

# **Basis for Opinion**

We conducted our audit in accordance with Regulation (EU) No. 537/2014 (hereinafter EU Regulation) and Austrian Generally Accepted Standards on Auditing. Those standards require the application of the International Standards on Auditing (ISAs). Our responsibilities under those provisions and standards are further described in the "Auditor's Responsibilities for the Audit of the Consolidated Financial Statements" section of our report. We are independent of the Group in accordance with Austrian Generally Accepted Accounting Principles and professional requirements, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained until the date of the auditor's report is sufficient and appropriate to provide a basis for our opinion by this date.

# **Key Audit Matters**

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the financial year. These matters were addressed in the context of our audit

of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

We have structured key audit matters as follows:

- Description
- Audit approach and key observations
- Reference to related disclosures

### 1. Measurement of goodwill

Description

Goodwill in the amount of EUR 344 million is tested for impairment at least once a year and additionally whenever there is an indication for impairment. The impairment tests carried out for this purpose require the Management Board to make discretionary decisions, estimates and assumptions, which particularly includes budgeted cash flows in the individual cash-generating units, future market conditions, growth rates and capital costs. Changes in these assumptions as well as in the methods used may have a material impact on measurement.

Due to the matter described, we considered the testing of goodwill for impairment as a key audit matter and have taken it into account in the course of our audit.

· Audit approach and key observations

### We:

- evaluated the implemented processes and work flows regarding measurement as well as tested selected key controls,
- compared the accounting and measurement methods with the accounting provisions of IAS 36,
- examined whether the calculation method of the impairment test is appropriate and assessed the significant discretionary decisions and assumptions,
- verified the derivation of the capital costs and juxtaposed it to a calculation we made ourselves and
- compared the company planning approved by the Management Board and Supervisory Board with the cash flows included in the impairment test.

The accounting and measurement methods applied are in accordance with IFRSs. We consider the underlying assumptions and measurement parameters to be plausible and reasonable.

### • Reference to related disclosures

Refer to chapter "Use of discretionary decisions and estimates" under General information in the notes as well as "4.2. Intangible assets" in the notes to the consolidated financial statements

# 2. Measurement of liabilities from insurance contracts in life insurance and health insurance

Description

In the consolidated financial statements of the Company, liabilities in the amount of EUR 22,196 million (78% of the consolidated balance sheet total) are reported in the item "liabilities from insurance contracts". Thereof liabilities in the amount of EUR 17,617 million (62% of the consolidated balance sheet total) are attributable to life and health insurance. Within life and health insurance, EUR 17,025 million relate to the aggregate policy reserve that is measured pursuant to the variable fee approach (VFA) or the general measurement model (GMM). The contractual service margin that is also included in the balance sheet item in the amount of EUR 5,032 million represents the as of yet unrealised profit from a group of insurance contracts. The percentage that is attributable to this financial year is released via the income statement based on defined coverage units.

Insofar as the aforementioned liabilities are measured according to the two mentioned measurement models, the measurement is based on complex actuarial methods relying on comprehensive assumptions about future developments of the insurance portfolios to be measured, with particular attention to the present values of the estimated future cash flows being affected by potential uncertainties. These uncertainties arise from the methods used and the determined actuarial assumptions related to interest rates, investment returns, mortality, invalidity, longevity, costs and policyholder behaviour.

Due to the significant monetary importance and the complex determination of the underlying assumptions and estimates by the Management Board, we have identified the measurement of liabilities from insurance contracts in life and health insurance as a key audit matter and have taken it into account in the course of our audit.

Audit approach and key observations

#### We:

- evaluated the implemented processes and work flows regarding measurement of liabilities from insurance contracts in life and health insurance and assessed the appropriateness of selected key controls to determine assumptions and make estimates,
- assessed the presentation and processing of used cash flows and other input data in the used IT systems,
- verified the underlying assumptions for calculating the estimate of future cash flows.
- verified the approach for determining interest rates for discounting cash flows as well as for determining the risk adjustment,
- compared the determined coverage units with the requirements of IFRS 17 and verified the appropriate release of the contractual service margin in the period in which the margin arises as well as
- verified the accuracy and measurement of additional significant closing entries not included in the subsidiary ledger.

The accounting and measurement methods applied are in accordance with IFRSs. We consider the underlying assumptions and measurement parameters to be plausible and reasonable.

#### Reference to related disclosures

Refer to chapter "3. Insurance contracts" in the notes to the consolidated financial statement

# 3. Measurement of liabilities from insurance contracts in property and casualty insurance

Description

In the consolidated financial statements of the Company, liabilities in the amount of EUR 22,196 million (78% of the consolidated balance sheet total) are reported in the item "liabilities from insurance contracts". Thereof liabilities in the amount of EUR 4.579 million (16% of the consolidated balance sheet total) are attributable to property and casualty insurance. Within the liabilities from insurance contracts, EUR 3.723 million of property and casualty insurance relate to the "provision for claims outstanding" that covers the expectations of realised but outstanding insurance claims. These represent the Company's expectation of future payments for known and unknown claims as well as the associated expenses. Different methods are used by the Company to estimate these obligations. Additionally, the measurement of this provision requires a significant degree of judgment by the Company's Management Board regarding the assumptions to be made, such as expense ratios or claim settlement patterns.

The Management Board also has a significant degree of judgment in determining the discount rate for calculating the provision. Product lines with low claims frequency, high individual claims or long claims settlement periods generally face increased estimation uncertainties.

Due to their significant monetary importance, the discretion exercised by the Management Board, and the associated estimation uncertainties, we have identified the measurement of liabilities from insurance contracts in property and casualty insurance as a key audit matter and have taken it into account in the course of our audit.

Audit approach and key observations

### We:

- evaluated the implemented processes and work flows regarding measurement of liabilities from insurance contracts in property and casualty insurance and assessed the appropriateness of selected key controls to determine assumptions and make estimates,
- assessed the presentation and processing of used cash flows and other input data in the used IT systems,
- compared the actuarial methods and key assumptions applied with generally accepted actuarial methods and examined whether they are suitable for measuring the technical liabilities,

- assessed the appropriateness and integrity of the data and assumptions included in the measurement and verified the claim settlement processes, and
- recalculated the amount of provisions for selected product lines, particularly these with large provision amounts or increased estimation uncertainties.

The accounting and measurement methods applied are in accordance with IFRSs. We consider the underlying assumptions and measurement parameters to be plausible and reasonable.

Reference to related disclosures

Refer to chapter "3. Insurance contracts" in the notes to the consolidated financial statements

#### Other Information

Management is responsible for the other information. The other information comprises the information included in the Group Report 2024, but does not include the consolidated financial statements, the management report for the Group and our auditor's report thereon.

We obtained the corporate governance report and the consolidated non-financial statement prior to the date of this auditor's report; with the rest of the Group Report 2024 expected to be made available to us after that date.

Our opinion on the consolidated financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the consolidated financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed on the other information that we obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

# Responsibilities of Management and the Audit Committee for the Consolidated Financial Statements

Management is responsible for the preparation of the consolidated financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU (IFRSs) and the additional regulations of section 245a Austrian Company Code and the supplementary provisions of section 138 para. 8 Austrian Insurance Supervision Act, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

The Audit Committee is responsible for overseeing the Group's financial reporting process.

# Auditor's Responsibilities for the Audit of the Consolidated Financial Statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the EU Regulation and with Austrian Generally Accepted Standards on Auditing, which require the application of ISAs, will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with the EU Regulation and with Austrian Generally Accepted Standards on Auditing, which require the application of ISAs, we exercise professional judgment and maintain professional skepticism throughout the audit.

#### We also:

- identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risks of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- plan and perform the group audit to obtain sufficient appropriate audit evidence regarding the financial information of the entities or business units within the Group as a basis for forming an opinion on the consolidated financial statements. We are responsible for the direction, supervision and review of the audit work performed for purposes of the group audit. We remain solely responsible for our audit opinion.

We communicate with the Audit Committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Audit Committee with a statement that we have complied with all relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, on measures taken to eliminate identified threats or on applied safeguards.

From the matters communicated with the Audit Committee, we determine those matters that were of most significance in the audit of the consolidated financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

# Report on Other Legal and Regulatory Requirements Comments on the Management Report for the Group

Pursuant to Austrian Generally Accepted Accounting Principles, the management report for the Group is to be audited as to whether it is consistent with the consolidated financial statements and as to whether the management report for the Group was prepared in accordance with the applicable legal regulations. Regarding the consolidated non-financial statement contained in the management report for the Group, it is our responsibility to examine whether it has been prepared, to read it and to consider whether it is, based on our knowledge obtained in the audit, materially inconsistent with the consolidated financial statements or otherwise appears to be materially misstated.

Management is responsible for the preparation of the management report for the Group in accordance with Austrian Generally Accepted Accounting Principles and the provisions of the Austrian Insurance Supervision Act.

We conducted our audit in accordance with Austrian standards on auditing for the audit of the management report for the Group.

#### **Opinion**

In our opinion, the management report for the Group was prepared in accordance with the applicable legal regulations, comprising the details in accordance with section 243a UGB, and is consistent with the consolidated financial statements.

#### Statement

Based on the findings during the audit of the consolidated financial statements and due to the obtained understanding concerning the Group and its circumstances no material misstatements in the management report for the Group came to our attention.

# Additional Information in Accordance with Article 10 of the EU Regulation

We were elected as statutory auditor at the ordinary general meeting dated 6 June 2023. We were appointed by the Supervisory Board on 22 December 2023. Besides that, we were elected as auditor for the following financial year by the ordinary general meeting on 3 June 2024 and appointed by the Supervisory Board on 19 September 2024. We have audited the Company for an uninterrupted period since 31 December 2013.

We confirm that the audit opinion in the "Report on the Consolidated Financial Statements" section is consistent with the additional report to the Audit Committee referred to in Article 11 of the EU Regulation.

Vienna 17 March 2025 We declare that no prohibited non-audit services (Article 5 para. 1 of the EU Regulation) were provided by us and that we remained independent of the audited company in conducting the audit.

### **Responsible Engagement Partner**

Responsible for the proper performance of the engagement is Robert Fink, Austrian Certified Public Accountant.

PwC Wirtschaftsprüfung GmbH

Robert Fink Austrian Certified Public Accountant

signed

This report is a translation of the original report in German, which is solely valid. Publication and sharing with third parties of the consolidated financial statements together with our auditor's report is only allowed if the consolidated financial statements and the management report for the Group are identical with the German audited version. This auditor's report is only applicable to the German and complete consolidated financial statements with the management report for the Group. For deviating versions, the provisions of section 281 para. 2 UGB apply.

# **Independent Assurance Report**

To UNIQA Insurance Group AG, Vienna

We have performed a limited assurance engagement of the consolidated sustainability reporting included in the section "Sustainability Statement" of UNIQA Insurance Group AG, Vienna, for the financial year ended as at 31 December 2024.

# Conclusion Based on a Limited Assurance Engagement

Based on the procedures performed and evidence obtained nothing has come to our attention that causes us to believe that the consolidated sustainability reporting included in the management report for the Group in the section "Sustainability Statement" does not comply, in all material aspects, with the requirements of Article 29a of the Directive 2013/34/EU, including:

- compliance with the European Sustainability Reporting Standards (hereinafter ESRS) including carrying out the process to identify the information to be reported pursuant to ESRS (hereinafter "Materiality Assessment Process"), and its presentation in disclosure "1.6.1.1 Description of the process to identify and assess material impacts, risks and opportunities (IRO-1)", and
- compliance with the reporting requirements pursuant to Article 8 of the Taxonomy Regulation (EU) 2020/852 (hereinafter EU Taxonomy Regulation).

### **Basis for Conclusion**

We performed our limited assurance engagement in accordance with the legal requirements and the professional standards applicable in Austria with regard to other assurance engagements and additional opinions. The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement; consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

Our responsibilities under those provisions and standards are further described in the "Auditor's Responsibilities for the Limited Assurance Engagement of the Consolidated Sustainability Reporting" section of our report.

We are independent of the Group in accordance with professional requirements and we have fulfilled our other ethical responsibilities in accordance with these requirements.

Our assurance activities are subject to the requirements of KSW-PRL 2022, which essentially corresponds to the requirements pursuant to ISQM 1, applying an extensive quality management system including documented guidelines and processes to adhere to ethical requirements, professional standards as well as applicable legal and regulatory requirements.

We believe that the assurance evidence we have obtained until the date of the independent assurance report is sufficient and appropriate to provide a basis for our opinion by this date.

# Other Matter – Prior-year Disclosures as at 31 December 2023

Prior-year disclosures were not subject to a comparable assurance engagement.

### Other Information

Management is responsible for the other information. The other information comprises the information included in the consolidated financial statements and the management report for the Group and the Group Report as well as the Financial Report, but does not include the "Sustainability Statement" and our independent assurance report.

Our conclusion on the consolidated sustainability reporting included in the section "Sustainability Statement" does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our limited assurance engagement of the consolidated sustainability reporting included in the section "Sustainability Statement" our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the consolidated sustainability reporting included in the section "Sustainability Statement" or our knowledge obtained in the limited assurance engagement, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

# **Responsibilities of Management**

Management is responsible for the preparation of the sustainability statement including developing and performing the Materiality Assessment Process pursuant to the applicable requirements and standards. This responsibility includes

- identifying actual and potential impacts as well as risks and opportunities related to sustainability aspects and assessing the materiality of these impacts, risks and opportunities
- preparing the sustainability reporting included in the section "Sustainability Statement" complying with the requirements of Article 29a of the Directive 2013/34/EU, including compliance with the ESRS,
- including disclosures in the sustainability statement in accordance with the EU Taxonomy Regulation as well as
- designing, implementing and maintaining such internal controls as management determines is relevant to enable the preparation of sustainability reporting included in the section "Sustainability Statement" that is free from material misstatements, whether due to fraud or error, and performing the Materiality Assessment Process pursuant to the requirements of the ESRS.

Furthermore, this responsibility includes the selection and application of appropriate methods regarding sustainability reporting as well as making assumptions and estimates on the individual sustainability disclosures appropriate under the given circumstances.

# Inherent Limitations for the Preparation of the Sustainability Reporting

When reporting on future-oriented information, the Company is required to prepare this future-oriented information based on disclosed assumptions about events that may occur in the future as well as possible future actions by the Group. Actual outcomes are likely to be different since anticipated events frequently do not occur as expected.

Certain key figures in sustainability reporting may be subject to inherent limitations, e.g. information on the value chain regarding emission data provided by third parties.

For reporting on greenhouse gas emissions, the scientific basis plays a decisive role. This may lead to challenges, in particular regarding the determination of emission factors, e.g. when these factors are required to combine emissions of different gases and describe them in a single unit of measurement such as  $CO_2$  equivalents. Therefore, incomplete scientific knowledge may lead to uncertainties in reporting.

When determining disclosures pursuant to the EU Taxonomy Regulation, management is required to interpret undefined legal terms. Undefined legal terms may be interpreted differently, also regarding legal compliance of the interpretations, thus they are subject to uncertainties.

# Auditor's Responsibilities for the Assurance Engagement of the Consolidated Sustainability Reporting

Our responsibility is to plan and perform a limited assurance engagement to obtain limited assurance about whether the consolidated sustainability reporting included in the section "Sustainability Statement" including the comprised Materiality Assessment Process and the reporting pursuant to the EU Taxonomy Regulation is free from material misstatement, whether due to fraud or error, and to issue an independent assurance report that includes our conclusion. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the sustainability statement.

We exercise professional judgment and maintain professional skepticism throughout the limited assurance engagement.

Our responsibilities include:

- performing risk-based procedures comprising obtaining an understanding of internal controls relevant to this engagement in order to identify disclosures where material misstatements are likely to arise, whether due to fraud or error, but not for the purpose of expressing a conclusion on the effectiveness of the Group's internal controls, and
- developing and performing procedures regarding disclosures in the sustainability reporting, where material misstatements are likely to arise.

The risks of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

# **Summary of Performed Work**

A limited assurance engagement requires performing procedures to gain evidence on the sustainability reporting included in the section "Sustainability Statement". The nature, timing and scope of the selected procedures depend on professional judgement including identifying disclosures in the sustainability reporting where material misstatements are likely to arise, whether due to fraud or error.

In our limited assurance engagement regarding the sustainability reporting in the section "Sustainability Statement" we proceed as follows:

- We obtain an understanding on the Materiality Assessment Process, especially through:
- interviews, to understand the information sources used by management; and
- · reviewing the internal process documentation; and
- We evaluate whether the Materiality Assessment Process complies with the ESRS requirements and the process presentation in disclosure "1.6.1.1 Description of the process to identify and assess material impacts, risks and opportunities (IRO-1)", based on the findings obtained from our procedures performed.
- We evaluate whether all relevant information identified in the Materiality Assessment Process were included in the sustainability statement.
- We obtain an understanding of the Company's procedures relevant for the preparation of the sustainability statement.
- We evaluate whether the structure and presentation of the consolidated sustainability reporting included in the sustainability statement comply with the ESRS.
- Regarding the linkage with other parts of the corporate reporting and connected information, we compare selected disclosures in the sustainability statement with the corresponding disclosures in the management report for the Group and the other sections of the management report for the Group.
- We interview relevant employees and perform analytical audit procedures regarding selected disclosures in the sustainability statement.
- We perform sample-based, result-oriented procedures regarding selected disclosures in the sustainability statement.
- We obtain evidence on the presented methods regarding the development of estimates and future-oriented information.
- We obtain an understanding of the procedure to identify taxonomy-eligible and taxonomy-aligned economic activities and of the preparation of the corresponding disclosures in the sustainability statement.

# **Limited Liability**

The limited assurance engagement of the sustainability statement is voluntary. According to the agreement, in the event of liability, any contributory negligence on the part of the company subject to a limited assurance engagement, its legal representatives and vicarious agents must be taken into account. Because our report is prepared solely for and on behalf of the client, it does not constitute a basis for any reliance on its contents by third parties. Therefore, no claims of third parties can be derived from it.

Our independent assurance report is issued based on the engagement letter agreed with the Company and is governed by the General Conditions of Contract for the Public Accounting Professions (AAB 2018) enclosed to this report, which also apply towards third parties.

Deviating from item 7 para. 2 AAB 2018, our liability for gross negligence to the Company is limited to half of the liability limit provided for the auditor in section 266 subsec. 7 VAG (Austrian Insurance Supervision Act), thus to EUR 9 million.

# **Responsible Engagement Partner**

Responsible for the proper performance of the limited assurance engagement of the sustainability reporting is Mr. Werner Stockreiter, Austrian Certified Public Accountant.
