

Our environmental policy

Building on our sustainability strategy, UNIQA Insurance Group AG is committed to the guidelines established as part of its environmental management system.

Clear environmental strategy.

We are committed to achieve net-zero emissions by 2040 at our Austrian location and Group-wide by 2050. We therefore pledge ourselves to actively counteract the climate crisis and avoid environmental pollution.

Continuous improvement.

We have identified our environmental aspects and the opportunities and risks associated with them. From this, we derive measures to continuously improve our operational environmental performance and to achieve our environmental goals.

Joint environmental protection.

Environmental protection is an integral part of our corporate culture. The active involvement of our employees brings the environmental management system to life. They act as multipliers and thus they motivate others to act sustainably.

Ecological operations.

We are committed to reducing our ecological footprint. Therefore, we focus on the expansion of renewable energy systems and the reduction of our consumption through various energy efficiency measures. Greening our mobility behavior and increasing resource efficiency along the value chain are also key priorities of our environmental management system.

Sustainable core business.

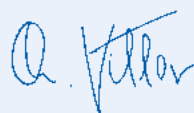

As a member of the Green Finance Alliance, we are committed to reducing direct and indirect greenhouse gas emissions in our core business. In this way, we are continuously driving decarbonization in the insurance business and in investment through the further development of sustainable products and services.

Transparency and communication.

We consistently pursue our environmental goals and undergo internal and external audits. To make our goals, measures and achievements transparent, we regularly publish our environmental report.

Legal compliance.

Legal compliance is vital for us. We are therefore committed to the ongoing evaluation and compliance of all environmentally relevant legal provisions and binding obligations.
